

Policy-Wise Server Abstract Profile of the OASIS Digital Signature Service

Committee Draft, 24 December, 2004
(Working Draft 04)

Document identifier:

oasis-dss-1.0-profiles-pws-spec-cd-01.doc

Location:

<http://docs.oasis-open.org/dss/>

Editor:

Paul Madsen, Entrust <p.madsen@entrust.com>

Contributors:

Abstract:

This draft profiles the OASIS DSS core protocols for environments where the client is either ignorant of signing/verification policy or does not have the authority to specify such policy. It is the server (or the infrastructure behind it) that maintains and specifies policy and so is 'policy-wise'. This profile is abstract as it is not expected to be directly implementable but rather is itself profiled by other implementable profiles.

Status:

This is a **Committee Draft** produced by the OASIS Digital Signature Service Technical Committee. Committee members should send comments on this draft to dss@lists.oasis-open.org.

For information on whether any patents have been disclosed that may be essential to implementing this specification, and any offers of patent licensing terms, please refer to the Intellectual Property Rights section of the Digital Signature Service TC web page at <http://www.oasis-open.org/committees/dss/ipr.php>.

1 Introduction

64

65

66 The DSS signing and verifying protocols are defined in **[DSSCore]**. As defined in that document,
67 these protocols have a fair degree of flexibility and extensibility. This document profiles these
68 protocols to limit their flexibility and extend them in concrete ways. It also profiles the processing
69 rules followed by clients and servers when using these protocols. The resulting profile is an
70 *abstract profile*. Further profiles will build on this one to provide a basis for implementation and
71 interoperability.

72 The following sections describe how to understand the rest of this document.

73

1.1 Notation

74

75 The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD",
76 "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this specification are to be
77 interpreted as described in IETF RFC 2119 **[RFC 2119]**. These keywords are capitalized when
78 used to unambiguously specify requirements over protocol features and behavior that affect the
79 interoperability and security of implementations. When these words are not capitalized, they are
80 meant in their natural-language sense.

81 This specification uses the following typographical conventions in text: `<ns:Element>`,
82 Attribute, **Datatype**, OtherCode.

1.2 Namespaces

83

84 .

85 This schema is associated with the following XML namespace:

86 `urn:oasis:names:tc:dss:1.0:profiles:policywiseserver:1.0`

87 If a future version of this specification is needed, it will use a different namespace. Conventional
88 XML namespace prefixes are used in this document:

- 89 • The prefix `pws:` stands for the DSS code-signing namespace **[PWS-XSD]**.
- 90 • The prefix `dss:` (or no prefix) stands for the DSS core namespace **[Core-XSD]**.
- 91 • The prefix `ds:` stands for the W3C XML Signature namespace **[XMLSig]**.

92 Applications MAY use different namespace prefixes, and MAY use whatever namespace
93 defaulting/scoping conventions they desire, as long as they are compliant with the Namespaces
94 in XML specification **[XML-ns]**.

1.3 Overview (Non-normative)

95

96 DSS provides to clients significant flexibility in customizing the base SignRequest/VerifyRequest
97 messages, implying that the DSS client is sufficiently aware of signing/verification policy to create
98 appropriate requests. In many scenarios, for reasons of security and/or policy management,
99 clients will not have this policy awareness; signing/verification policy will be instead stored and
100 managed at (or behind) the DSS server on behalf of its clients.

101

102 Consequently, in these scenarios, the full flexibility that the base DSS profiles provide for request
103 customization is unnecessary. The Policy-wise DSS Profile will remove this undesirable flexibility
104 to facilitate interoperability.

105

106 • Signature creation will be based on DSS SignRequest. Currently optional request inputs for
107 Selective Signing, Signature Placement, Processing steps, Output options, etc will be
108 removed.

109 • Signature verification will be based on DSS VerifyRequest. Currently optional request inputs
110 for Selective Verification, Trust Settings etc will be removed.

111 **2 Profile Features**

112 **2.1 Identifier**

113

114 **urn:oasis:names:tc:dss:1.0:profiles:pws**

115 **2.2 Scope**

116 This document profiles the DSS signing and verifying protocols defined in **[DSSCore]**.

117 **2.3 Relationship To Other Profiles**

118 The profiles in this document are based on the **[DSSCore]**. This profile is an abstract profile
119 which is not implementable directly and must be further profiled or combined with another
120 implementable concrete profile.

121 **2.4 Signature Object**

122 This profile does not specify or constrain the type of signature object.

123 **2.5 Transport Binding**

124 This profile does not specify or constrain the transport binding.

125 **2.6 Security Binding**

126 This profile does not specify or constrain the security binding.

127

128 3 Profile of Signing Protocol

129 3.1 Element <SignRequest>

130 3.1.1 Attribute profile

131 The profile identifier for Policy Wise Server MUST NOT be used as the value of the Profile
132 attribute.

133 3.1.2 Element <OptionalInputs>

134 The <ServicePolicy> and <ClaimedIdentity>, optional inputs from [DSSCore] are
135 supported and may be sent by the client.

136

137 Clients MUST NOT send the following optional inputs unless contained within a <SignedInput>
138 element (defined below):

139

- 140 • Element <IntendedAudience>
- 141 • Element <SignatureType>
- 142 • Element <AddTimestamp>
- 143 • Element <KeySelector>
- 144 • Element <Language>
- 145 • Element <SignedReferences>
- 146 • Element <Properties>
- 147 • Element <SignaturePlacement>
- 148 • Element <EnvelopingSignature>

149

150 3.1.2.1 Element <AdditionalProfile>

151 The Policy Wise Server profile identifier MUST be placed in an <AdditionalProfile>
152 element.

153 3.1.2.2 Element <SignedInput>

154 This profile introduces a new <SignedInput> element within <OptionalInputs>. The
155 <SignedInput> element will carry signed policy statements for signing requests.

156 If present, the <SignedInput> element MUST contain one or more <ds:Signature>
157 elements that envelop the policy statements.

158

```
159 <xs:element name="SignedInput">  
160   <xs:complexType>  
161     <xs:sequence>  
162       <xs:element ref="ds:Signature" minOccurs="1"/>  
163     </xs:sequence>  
164   </xs:complexType>  
165 </xs:element>
```

166 **3.1.3 Element <InputDocuments>**

167 For requests to sign XML documents, the client MUST only send <Document> input documents -
168 the client MUST NOT send <DocumentHash> input documents as this would require that the
169 client know which elements of the original XML document were to be signed.

170 **3.2 Element <SignResponse>**

171 **3.2.1 Element <Result>**

172 This profile defines no additional <ResultMinor> codes.

173 **3.2.2 Element <OptionalOutputs>**

174 This profile does not specify or constrain the optional outputs returned by the server.

175 **3.2.3 Element <SignatureObject>**

176 This profile does not specify or constrain the type of signature object returned by the server.

177

178 **4 Profile of Verifying Protocol**

179 **4.1 Element <VerifyRequest>**

180 **4.1.1 Element <OptionalInputs>**

181 The client MUST NOT send any optional inputs unless these inputs are contained within a
182 <ows:SignedInput> element.

183 **4.1.2 Element <SignatureObject>**

184 This profile does not specify or constrain the type of signature object.

185 **4.1.3 Element <InputDocuments>**

186 This profile does not specify or constrain the type of input documents.

187 **4.2 Element <VerifyResponse>**

188 **4.2.1 Element <Result>**

189 This profile defines no additional <ResultMinor> codes.

190 **4.2.2 Element <OptionalOutputs>**

191 This profile does not specify or constrain the optional outputs returned by the server.

192 5 Profile of Server Processing Rules

193 In addition to the basic processing steps defined in **[DSSCore]**, a DSS Server should validate any
194 `<ds:Signature>` element contained within the `<OptionalInputs>` element according to
195 section 3.2.2 in **[XMLSig]**.

196

197 For any such signatures, the DSS Server **MUST** verify that the signer is authorized to specify
198 policy for the corresponding request.

Appendix A. Revision History

Rev	Date	By Whom	What
wd-01	2004-02-10	Paul Madsen	Initial version
wd-02	2004-03-22	Paul Madsen	To reflect template changes & feedback
wd-03	2004-04-30	Paul Madsen	Introduce <SignedInput> element
wd-04	2004-10-09	Paul Madsen	Fixed typo in <SignedInput> schema. Removed reference to normative Policy Wise Server XSD, changed allowed <OptionalInputs> on <SignRequest>. Added profile identifier

Appendix B. Notices

221 OASIS takes no position regarding the validity or scope of any intellectual property or other rights
222 that might be claimed to pertain to the implementation or use of the technology described in this
223 document or the extent to which any license under such rights might or might not be available;
224 neither does it represent that it has made any effort to identify any such rights. Information on
225 OASIS's procedures with respect to rights in OASIS specifications can be found at the OASIS
226 website. Copies of claims of rights made available for publication and any assurances of licenses
227 to be made available, or the result of an attempt made to obtain a general license or permission
228 for the use of such proprietary rights by implementers or users of this specification, can be
229 obtained from the OASIS Executive Director.

230 OASIS invites any interested party to bring to its attention any copyrights, patents or patent
231 applications, or other proprietary rights which may cover technology that may be required to
232 implement this specification. Please address the information to the OASIS Executive Director.
