97 conformance clauses) that do not contradict any KMIP requirements.

98 3 Cryptographic Profile Test Cases

99 The test cases define a number of request-response pairs for KMIP operations. Each test case is
100 provided in the XML format specified in [KMIP-ENCODE] intended to be both human-readable and usable
101 by automated tools. The time sequence (starting from 0) for each request-response pair is noted and line
102 numbers are provided for ease of cross-reference for a given test sequence.

103 Each test case has a unique label (the section name) which includes indication of mandatory (-M-) or
104 optional (-O-) status and the protocol version major and minor numbers as part of the identifier.

105 The test cases may depend on a specific configuration of a KMIP client and server being configured in a
106 manner consistent with the test case assumptions.

107 Where possible the flow of unique identifiers between tests, the date-time values, and other dynamic
108 items are indicated using symbolic identifiers – in actual request and response messages these dynamic
109 values will be filled in with valid values.

110 Note: the values for the returned items and the custom attributes are illustrative. Actual values from a real
111 client or server system may vary as specified in section 4.7.

112 3.1 Mandatory Test Cases KMIP v1.2 - Basic

113 3.1.1 CS-BC-M-1-12 - Encrypt with New Symmetric Key

114 Create a symmetric key and perform encrypt using the symmetric key.

116 3.1.2 CS-BC-M-2-12 - Decrypt with New Symmetric Key

117 Create a symmetric key and perform decrypt using the symmetric key. Note: Create followed by Decrypt
 118 is unusual but some applications actually do this relying on Decrypt and Encrypt being able to be used
 119 around the 'wrong' way to get the same result.

128 **3.1.5 CS-BC-M-5-12 - Decrypt with Known Symmetric Key**

129 Register a symmetric key and perform decrypt using the symmetric key. Note: Register followed by
 130 Decrypt is unusual but some applications actually do this relying on Decrypt and Encrypt being able to be
 131 used around the 'wrong' way to get the same result.

169 Register a symmetric key and perform encrypt using the symmetric key followed by decrypt. The input
 170 data is non-block size. The Cryptographic Parameters are associated attributes of the key rather than
 171 parameters to the operation. This is otherwise the same as CS-BC-M-12-12.

177 The Process Start Date is set to a future date. The Protect Stop Date is set to a past date.

178 This is a modified version of CS-BC-M-6-12.

254 4.7 Permitted Test Case Variations

255 Whilst the test cases provided in this Profile define the allowed request and response content, some
256 inherent variations MAY occur and are permitted within a successfully completed test case.

257 Each test case MAY include allowed variations in the description of the test case in addition to the
258 variations noted in this section.

259 Other variations not explicitly noted in this Profile SHALL be deemed non-conformant.

260 4.7.1 Variable Items

261 An implementation conformant to this Profile MAY vary the following values:

- 262 1. UniqueIdentifier
- 263 2. PrivateKeyUniqueIdentifier
- 264 3. PublicKeyUniqueIdentifier
- 265 4. UniqueBatchItemIdentifier
- 266 5. AsynchronousCorrelationValue
- 267 6. TimeStamp
- 268 7. KeyValue / KeyMaterial including:
 - 269 a. key material content returned for managed cryptographic objects which are generated by
 - 270 the server
 - 271 b. wrapped versions of keys where the wrapping key is dynamic or the wrapping contains
 - 272 variable output for each wrap operation
- 273 8. For response containing the output of cryptographic operation in Data / SignatureData/ MACData
- 274 / IVCounterNonce where:
 - 275 a. the managed object is generated by the server; or
 - 276 b. the operation inherently contains variable output
- 277 9. For the following DateTime attributes where the value is not specified in the request as a fixed
- 278 DateTime value:
 - 279 a. ActivationDate
 - 280 b. ArchiveDate
 - 281 c. CompromiseDate
 - 282 d. CompromiseOccurrenceDate
 - 283 e. DeactivationDate
 - 284 f. DestroyDate
 - 285 g. InitialDate

 - 287 i. ProtectStartDate
 - 288 j. ProcessStopDate
 - 289 k. ValidityDate
 - 290 l. OriginalCreationDate
- 291 10. LinkedObjectIdentifier
- 292 11. DigestValue
 - 293 a. For those managed cryptographic objects which are dynamically generated
- 294 12. KeyFormatType
 - 295 a. The key format type selected by the server when it creates managed objects
- 296 13. Digest
 - 297 a. The HashingAlgorithm selected by the server when it calculates the digest for a managed
 - 298 object for which it has access to the key material
 - 299 b. The Digest Value
- 300 14. Extensions reported in Query for ExtensionList and ExtensionMap
- 301 15. Application Namespaces reported in Query
- 302 16. Object Types reported in Query other than those noted as required in this profile
- 303 17. Operation Types reported in Query other than those noted as required in this profile (or any
- 304 referenced profile documents)
- 305 18. For TextString attribute values containing test identifiers:

- 306 a. Additional vendor or application prefixes
307 19. Additional attributes beyond those noted in the response

308

309 An implementation conformant to this Profile MAY allow the following response variations:

- 310 20. Object Group values – May or may not return one or more Object Group values not included in
311 the requests
- 312 21. y-CustomAttributes – May or may not include additional server-specific associated attributes not
313 included in requests
- 314 22. Message Extensions – May or may not include additional (non-critical) vendor extensions
- 315 23. TemplateAttribute – May or may not be included in responses where the Template Attribute
316 response is noted as optional in [KMIP-SPEC-1_2]

320 from the text contained within the test case.
- 321 26. The list of Protocol Versions returned in a DiscoverVersion response may include additional
322 protocol versions if the request has not specified a list of client supported Protocol Versions.
- 323 27. VendorIdentification - The value (if included) may vary from the text contained within the test
324 case.

325 **4.7.2 Variable behavior**

326 An implementation conformant to this Profile SHALL allow variation of the following behavior:

- 327 1. A test MAY omit the clean-up requests and responses (containing Revoke and/or Destroy) at the
328 end of the test provided there is a separate mechanism to remove the created objects during
329 testing.
- 330 2. A test MAY omit the test identifiers if the client is unable to include them in requests. This
331 includes the following attributes:
- 332 a. Name; and
- 333 b. x-ID
- 334 3. A test MAY perform requests with multiple batch items or as multiple requests with a single batch
335 item provided the sequence of operations are equivalent
- 336 4. A request MAY contain an optional *Authentication* [KMIP_SPEC] structure within each request
- 337
