Abstract:

Describes a profile for Tape Libraries as KMIP clients interacting with KMIP servers.

Status:

This document was last revised or approved by the OASIS Key Management Interoperability Protocol (KMIP) TC on the above date. The level of approval is also listed above. Check the "Latest version" location noted above for possible later revisions of this document. Any other numbered Versions and other technical work produced by the Technical Committee (TC) are listed at https://www.oasis-open.org/committees/tc_home.php?wg_abbrev=kmip#technical.

Technical Committee members should send comments on this specification to the Technical Committee's email list. Others should send comments to the Technical Committee by using the "Send A Comment" button on the Technical Committee's web page at <https://www.oasis-open.org/committees/kmip/>.

For information on whether any patents have been disclosed that may be essential to implementing this specification, and any offers of patent licensing terms, please refer to the Intellectual Property Rights section of the Technical Committee web page (<https://www.oasis-open.org/committees/kmip/ipr.php>).

All capitalized terms in the following text have the meanings assigned to them in the OASIS Intellectual Property Rights Policy (the "OASIS IPR Policy"). The full [Policy](#) may be found at the OASIS website.

This document and translations of it may be copied and furnished to others, and derivative works that comment on or otherwise explain it or assist in its implementation may be prepared, copied, published, and distributed, in whole or in part, without restriction of any kind, provided that the above copyright notice and this section are included on all such copies and derivative works. However, this document itself may not be modified in any way, including by removing the copyright notice or references to OASIS, except as needed for the purpose of developing any document or deliverable produced by an OASIS Technical Committee (in which case the rules applicable to copyrights, as set forth in the OASIS IPR Policy, must be followed) or as required to translate it into languages other than English.

The limited permissions granted above are perpetual and will not be revoked by OASIS or its successors or assigns.

This document and the information contained herein is provided on an "AS IS" basis and OASIS DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTY THAT THE USE OF THE INFORMATION HEREIN WILL NOT INFRINGE ANY OWNERSHIP RIGHTS OR ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

OASIS requests that any OASIS Party or any other party that believes it has patent claims that would necessarily be infringed by implementations of this OASIS Committee Specification or OASIS Standard, to notify OASIS TC Administrator and provide an indication of its willingness to grant patent licenses to such patent claims in a manner consistent with the IPR Mode of the OASIS Technical Committee that produced this specification.

OASIS invites any party to contact the OASIS TC Administrator if it is aware of a claim of ownership of any patent claims that would necessarily be infringed by implementations of this specification by a patent holder that is not willing to provide a license to such patent claims in a manner consistent with the IPR Mode of the OASIS Technical Committee that produced this specification. OASIS may include such claims on its website, but disclaims any obligation to do so.

OASIS takes no position regarding the validity or scope of any intellectual property or other rights that might be claimed to pertain to the implementation or use of the technology described in this document or the extent to which any license under such rights might or might not be available; neither does it represent that it has made any effort to identify any such rights. Information on OASIS' procedures with respect to rights in any document or deliverable produced by an OASIS Technical Committee can be found on the OASIS website. Copies of claims of rights made available for publication and any assurances of licenses to be made available, or the result of an attempt made to obtain a general license or permission for the use of such proprietary rights by implementers or users of this OASIS Committee Specification or OASIS Standard, can be obtained from the OASIS TC Administrator. OASIS makes no representation that any information or list of intellectual property rights will at any time be complete, or that any claims in such list are, in fact, Essential Claims.

The name "OASIS" is a trademark of [OASIS](#), the owner and developer of this specification, and should be used only to refer to the organization and its official outputs. OASIS welcomes reference to, and implementation and use of, specifications, while reserving the right to enforce its marks against misleading uses. Please see <https://www.oasis-open.org/policies-guidelines/trademark> for above guidance.

1 Introduction

For normative definition of the elements of KMIP see the [KMIP Specification](#) [KMIP-SPEC] and the [KMIP Profiles](#) [KMIP-PROF].

This profile defines the necessary KMIP functionality that a Tape Library operating as a KMIP client SHALL use and a KMIP server conforming to this profile SHALL support in order to interoperate in conformance with this profile.

1.1 Terminology

The key words “MUST”, “MUST NOT”, “REQUIRED”, “SHALL”, “SHALL NOT”, “SHOULD”, “SHOULD NOT”, “RECOMMENDED”, “MAY”, and “OPTIONAL” in this document are to be interpreted as described in [RFC2119].

Key Associated Data (KAD)	Part of the tape format. May be segmented into authenticated and unauthenticated fields. KAD usage is detailed in the SCSI SSC-3 standard from the T10 organization available as ANSI INCITS 335-2000.
Hexadecimal Numeric Characters	Case-sensitive, printable, single byte ASCII characters representing the numbers 0 through 9 and uppercase alpha A through F. (US-ASCII characters 30h-39h and 41h-46h). Each byte (single 8-bit numeric value) is represented as two hexadecimal numeric characters with the high-nibble represented by the first (left-most) hexadecimal numeric character and the low-nibble represented by the second (right-most) hexadecimal numeric character.
N(a)	The maximum number of bytes in the tape authenticated KAD field. For LTO4, N(a) is 12 bytes. For LTO5, N(a) is 60 bytes. For LTO6, N(a) is 60 bytes.
N(u)	The maximum number of bytes in the tape unauthenticated KAD field. For LTO4, N(u) is 32 bytes. For LTO5, N(u) is 32 bytes. For LTO6, N(u) is 32 bytes.
N(k)	The maximum number of bytes in the tape format KAD fields – i.e. N(a) + N(u). For LTO4, N(k) is 44 bytes. For LTO5, N(k) is 92 bytes. For LTO6, N(k) is 92 bytes.

2 Tape Library Profile

The Tape Library Profile specifies the behavior of a tape library operating as a KMIP client interacting with a KMIP server.

2.1 Authentication Suite

Implementations conformant to this profile SHALL support at least one of the Authentication Suites defined within [KMIP-PROF].

2.2 Baseline Tape Library - Client

KMIP clients conformant to this profile under [KMIP-SPEC-1_0]:

1. SHALL conform to the [KMIP-SPEC-1_0]

KMIP clients conformant to this profile under [KMIP-SPEC-1_1]:

2. SHALL conform to the *Baseline Client Clause* (section 5.12) of [KMIP-PROF-1_1]

KMIP clients conformant to this profile under [KMIP-SPEC-1_2]:

3. SHALL conform to the *Baseline Client* (section 5.2) of [KMIP-PROF-1_2]

KMIP clients conformant to this profile

4. SHOULD support *Application Specific Information* [KMIP-SPEC] with Application Data provided by the client in accordance with section 2.4
5. SHOULD NOT use a *Custom Attribute* [KMIP-SPEC] that duplicates information that is already in standard *Attributes* [KMIP-SPEC]
6. MAY use x-Barcode as a *Custom Attribute* [KMIP-SPEC] of type Text String to store the barcode
7. MAY support any clause within [KMIP-SPEC] provided it does not conflict with any other clause within this section 2.2
8. MAY support extensions outside the scope of this standard (e.g., vendor extensions, conformance clauses) that do not conflict with any KMIP requirements

KMIP clients conformant to this profile under [KMIP-SPEC-1_2]:

9. SHALL support the following *Attributes* [KMIP-SPEC]
 - a. *Alternative Name* [KMIP-SPEC-1_2]
10. SHALL support the following *Message Encoding* [KMIP-SPEC-1_2]:
 - a. *Alternative Name Type Enumeration* [KMIP-SPEC-1_2] value:
 - i. Uninterpreted Text String
11. SHALL store the media barcode information in an *Alternative Name* [KMIP-SPEC-1_2] *Attribute* [KMIP-SPEC-1_2] in accordance with section 2.5

2.3 Baseline Tape Library - Server

KMIP servers conformant to this profile under [KMIP-SPEC-1_0]:

1. SHALL conform to the [KMIP-SPEC-1_0]

KMIP servers conformant to this profile under [KMIP-SPEC-1_1]:

2. SHALL conform to the *Baseline Server* of [KMIP-PROF-1_1]

KMIP servers conformant to this profile under [KMIP-SPEC-1_2]:

3. SHALL conform to the *Baseline Server* of [KMIP-PROF-1_2]

KMIP servers conformant to this profile:

4. SHALL support the following *Objects* [KMIP-SPEC]
 - a. *Symmetric Key* [KMIP-SPEC]
 5. SHALL support the following *Attributes* [KMIP-SPEC]:
 - a. *Name* [KMIP-SPEC]
 - b. *Cryptographic Algorithm* [KMIP-SPEC]
 - c. *Custom Attribute* [KMIP SPEC]
 - d. *Application Specific Information* [KMIP SPEC]
 6. SHALL support the following *Client-to-Server Operations* [KMIP-SPEC]:
 - a. *Create* [KMIP-SPEC]
 7. SHALL support the following *Message Contents* [KMIP-SPEC]:
 - a. *Batch Order Option* [KMIP-SPEC] value:
 - i. True
 - b. *Batch Count* [KMIP-SPEC] value:
 - i. 1 to 32
 8. SHALL support the following *Message Encoding* [KMIP-SPEC]:
 - a. *Cryptographic Algorithm Enumeration* [KMIP-SPEC] value:
 - i. AES
 - b. *Object Type Enumeration* [KMIP-SPEC] value:
 - i. Symmetric Key
 - c. *Key Format Type Enumeration* [KMIP-SPEC] value:
 - i. Raw
 - d. *Cryptographic Length* [KMIP-SPEC] value :
 - i. 256-bit
 - e. *Name Type Enumeration* [KMIP-SPEC] value:
 - i. Uninterpreted Text String
 9. SHALL support *Custom Attribute* [KMIP-SPEC] with the following data types and properties:
 - a. Text String
 - b. Integer
 - c. Date Time
 10. SHALL support a minimum length of 256 characters for *Custom Attribute* [KMIP-SPEC] and *Name* [KMIP-SPEC] values where the attribute type is of variable length
 11. SHALL support a minimum of 30 *Custom Attribute* [KMIP-SPEC] per managed object
 12. SHALL support a minimum of 64 characters in *Custom Attribute* [KMIP-SPEC] names
 13. MAY support any clause within [KMIP-SPEC] provided it does not conflict with any other clause within this section 2.2
 14. MAY support extensions outside the scope of this standard (e.g., vendor extensions, conformance clauses) that do not conflict with any KMIP requirements
- KMIP servers conformant to this profile under [KMIP-SPEC-1_2]:
15. SHALL support the following *Attributes* [KMIP-SPEC]
 - a. *Alternative Name* [KMIP-SPEC-1_2]
 16. SHALL support the following *Message Encoding* [KMIP-SPEC-1_2]:
 - a. *Alternative Name Type Enumeration* [KMIP-SPEC-1_2] value:

122

2.4 Using Application Specific Information for Key Identifiers

123 This information applies to Tape Libraries that use the *Application Specific Information* [KMIP-SPEC]
124 attribute to store key identifiers. KMIP clients are not required to use *Application Specific Information*
125 [KMIP-SPEC] however KMIP servers are required to support KMIP clients that use *Application Specific*
126 *Information* [KMIP-SPEC] and KMIP clients that do not use *Application Specific Information* [KMIP-
127 SPEC].

128 The *Application Specific Information* [KMIP-SPEC] MAY be used to store data that is specific to the
129 application (Tape Library) using the object.

130 The following Application Namespaces SHOULD be used in the Application Namespace field of the
131 *Application Specific Information* [KMIP-SPEC]:

- 132
 - LIBRARY-LTO, LIBRARY-LTO4, LIBRARY-LTO5, and LIBRARY-LTO6

133 For backwards compatibility with deployed Tape Library implementations, servers MAY support
134 VENDOR-LIBRARY-LTO as an Application Namespace, where VENDOR is an ASCII string that SHALL
135 NOT be further interpreted and SHALL be handled by the server as if the Application Namespace was
136 set to LIBRARY-LTO.

137 *Application Specific Information* [KMIP-SPEC] supports key identifiers being created either on the server
138 or on the client (Tape Library), but not both. This profile specifies key identifiers created by the client.

139 The *Application Specific Information* [KMIP-SPEC] method of key identification relies on the ability to
140 uniquely identify a key based only on its Application Data (preferably), or (alternatively) on some
141 combination of Application Data and *Custom Attributes* [KMIP-SPEC], which the key creator guarantees
142 to be unique within the Application Namespace.

143 Key identifiers stored in the KMIP server's *Application Specific Information* [KMIP-SPEC] are in ASCII
144 format. Key identifiers stored in the KMIP client's tape format KAD fields are numeric format. The
145 specific algorithm for converting between text and numeric formats is specified below.

146 All information contained in the tape format's KAD fields is converted to an ASCII string consisting of
147 hexadecimal numeric character pairs as follows:

- 148
 1. The unauthenticated KAD is converted to text;
 - 149 2. The authenticated KAD is converted to text and;
 - 150 3. The converted authenticated KAD text is concatenated to the end of the converted
151 unauthenticated KAD text.

152 If the implementation uses client-created key identifiers, then the client generates a new identifier in
153 ASCII format that SHALL be unique within the chosen namespace. The source material for generating
154 the string is dependent on client policy. The numeric representation of this identifier SHALL be no larger
155 than the N(k) bytes of the KAD for the tape media being used.

156 For KMIP clients and servers conforming to this profile, *Application Specific Information* [KMIP-SPEC]
157 SHALL be created by the Tape Library KMIP client based on the tape format's KAD fields as follows:

- 158
 1. Define an empty output buffer sufficient to contain a string with a maximum length of 2*N(k)
159 bytes.
 - 160 2. Copy the tape format's unauthenticated KAD (if present) to the output buffer, converting each
161 byte value to exactly two Hexadecimal Numeric Characters. The first byte (i.e., byte 0) of the
162 output buffer is the first byte of unauthenticated KAD.
 - 163 3. Concatenate the tape format's authenticated KAD to the output buffer, converting each byte
164 value to exactly two Hexadecimal Numeric Characters.

165

166 Note: the contents of the unauthenticated KAD and authenticated KAD fields may be less than the
167 maximum permitted lengths; the implementation provides the correct length values to use in the
168 algorithm rather than using fixed maximum length fields.

169 If *Application Specific Information* [KMIP-SPEC] is supported, then it SHALL be used by the client for
170 locating the object for the purpose of encrypting and decrypting data on tape. The *Application Specific*
171 *Information* [KMIP-SPEC] value SHALL solely be used for this purpose.

172 2.5 Using Alternative Name for tape media barcode

173 The Tape Library client SHALL assign a text (i.e., human-readable) representation of the media barcode
174 to the *Alternative Name* [KMIP-SPEC-1_2] of the object. This SHALL occur on first use of the object for
175 encryption, which normally is when the library requests the server to create the object.

176
177 The relationship between key identifiers in *Application Specific Information* [KMIP-SPEC] and *Alternative*
178 *Name* [KMIP-SPEC-1_2] is as follows:

- 179 a) The values for both are provided by the client
- 180 b) The identifier in *Alternative Name* [KMIP-SPEC-1_2] (i.e., the barcode) SHALL be used by the
181 server administrator for finding keys associated with specific tape media (e.g., a server
182 administrator may want to find the key(s) associated with a missing tape cartridge, where the
183 barcode of that tape cartridge is known).
- 184 c) The *Alternative Name* [KMIP-SPEC-1_2] SHALL NOT be used by a client for locating the object
185 to encrypt or decrypt data, since the value (barcode) is not required to be unique and therefore
186 does not ensure retrieval of the correct key.

3 Tape Library Profile Test Cases

The test cases define a number of request-response pairs for KMIP operations. Each test case is provided in the XML format specified in [KMIP-ENCODE] intended to be both human-readable and usable by automated tools. The time sequence (starting from 0) for each request-response pair is noted and line numbers are provided for ease of cross-reference for a given test sequence.

Each test case has a unique label (the section name) which includes indication of mandatory (-M-) or optional (-O-) status and the protocol version major and minor numbers as part of the identifier.

The test cases may depend on a specific configuration of a KMIP client and server being configured in a manner consistent with the test case assumptions.

Where possible the flow of unique identifiers between tests, the date-time values, and other dynamic items are indicated using symbolic identifiers – in actual request and response messages these dynamic values will be filled in with valid values.

Note: the values for the returned items and the custom attributes are illustrative. Actual values from a real client system may vary as specified in section 4.7.

3.1 Mandatory Test Cases KMIP v1.0

3.1.1 TL-M-1-10 - Configuration

Determine server configuration details including operations supported (only the mandatory operations are listed in the response example), objects supported (only the mandatory objects types are listed in the response example), optional server information, and optional list of application name spaces.

206

207 3.1.2 TL-M-2-10 - Write with new (created) key

208 This case may occur when the Write operation starts with the first block on a tape. The implementation
209 may choose which Write operations qualify for creation of a new key. Regardless of the initiating
210 circumstances, the Tape Library requests the server to create a new AES-256 symmetric key with
211 appropriate identifying information which is unique within the Application Namespace.

212 Additional custom attributes MAY be specified in order to:

- 213 - ensure uniqueness of the key identifier when later Locating the key via ASI
- 214 - provide human-readable information (such as the tape Barcode value)
- 215 - provide information to support client-specific purposes

```

217 **3.1.3 TL-M-3-10 - Read an encrypted tape**

218 The Tape Library constructs an identifier string based on the method in 2.3, then requests the server to
219 Locate that string via ASI. A Get is then requested based on the key's unique identifier. The Tape Library
220 MAY update attributes associated with the Symmetric Key Managed Object. The following test case
221 shows extensive use of custom attributes. Custom attributes are not required if the Application Name is
222 unique within the Application Namespace. An implementation may also use custom attributes for vendor-
223 unique purposes, or to improve usability.

224 The test case destroys the key created in the previous test case to clean up after the test. Tape Library
225 implementations may elect to not perform this step.

228 3.2 Mandatory Test Cases KMIP v1.1

229 3.2.1 TL-M-1-11 - Configuration

230 Determine server configuration details including operations supported (only the mandatory operations
231 are listed in the response example), objects supported (only the mandatory objects types are listed in the
232 response example), optional server information, and optional list of application name spaces.

233

234 3.2.2 TL-M-2-11 - Write with new (created) key

235 This case may occur when the Write operation starts with the first block on a tape. The implementation
236 may choose which Write operations qualify for creation of a new key. Regardless of the initiating
237 circumstances, the Tape Library requests the server to create a new AES-256 symmetric key with
238 appropriate identifying information which is unique within the Application Namespace.

239 Additional custom attributes MAY be specified in order to:

- 240 - ensure uniqueness of the key identifier when later Locating the key via ASI
- 241 - provide human-readable information (such as the tape Barcode value)
- 242 - provide information to support client-specific purposes

```

249 unique within the Application Namespace. An implementation may also use custom attributes for vendor-
250 unique purposes, or to improve usability.

251 The test case destroys the key created in the previous test case to clean up after the test. Tape Library
252 implementations may elect to not perform this step.

260

261 3.3.2 TL-M-2-12 - Write with new (created) key

262 This case may occur when the Write operation starts with the first block on a tape. The implementation
263 may choose which Write operations qualify for creation of a new key. Regardless of the initiating
264 circumstances, the Tape Library requests the server to create a new AES-256 symmetric key with
265 appropriate identifying information which is unique within the Application Namespace.

266 Additional custom attributes MAY be specified in order to:

- 267 - ensure uniqueness of the key identifier when later Locating the key via ASI
- 268 - provide human-readable information (such as the tape Barcode value)
- 269 - provide information to support client-specific purposes

```

3.3.3 TL-M-3-12 - Read an encrypted tape

The Tape Library constructs an identifier string based on the method in 2.3, then requests the server to Locate that string via ASI. A Get is then requested based on the key's unique identifier. The Tape Library MAY update attributes associated with the Symmetric Key Managed Object. The following test case shows extensive use of custom attributes. Custom attributes are not required if the Application Name is unique within the Application Namespace. An implementation may also use custom attributes for vendor-unique purposes, or to improve usability.

The test case destroys the key created in the previous test case to clean up after the test. Tape Library implementations may elect to not perform this step.

4 Conformance

4.1 Tape Library Client KMIP v1.0 Conformance

KMIP client implementations conformant to this profile:

1. SHALL support the Authentication Suite conditions (2.1);
2. SHALL support the Baseline Tape Library - Client conditions (2.2);
3. SHALL support the Using Application Specific Information for Key Identifiers conditions (2.4);
4. SHALL support the Using Alternative Name for tape media barcode conditions (2.5); and
5. SHALL support all the Mandatory Test Cases KMIP v1.0 (3.1).

4.2 Tape Library Client KMIP v1.1 Conformance

KMIP client implementations conformant to this profile:

1. SHALL support the Authentication Suite conditions (2.1);
2. SHALL support the Baseline Tape Library - Client conditions (2.2);
3. SHALL support the Using Application Specific Information for Key Identifiers conditions (2.4);
4. SHALL support the Using Alternative Name for tape media barcode conditions (2.5); and
5. SHALL support all the Mandatory Test Cases KMIP v1.1 (3.2).

4.3 Tape Library Client KMIP v1.2 Conformance

KMIP client implementations conformant to this profile:

1. SHALL support the Authentication Suite conditions (2.1);
2. SHALL support the Baseline Tape Library - Client conditions (2.2);
3. SHALL support the Using Application Specific Information for Key Identifiers conditions (2.4);
4. SHALL support the Using Alternative Name for tape media barcode conditions (2.5); and
5. SHALL support all the Mandatory Test Cases KMIP v1.2 (3.3).

4.4 Tape Library Server KMIP v1.0 Conformance

KMIP server implementations conformant to this profile:

1. SHALL support the Authentication Suite conditions (2.1);
2. SHALL support the Baseline Tape Library - Server conditions (2.3);
3. SHALL support the Using Application Specific Information for Key Identifiers conditions (2.4);
4. SHALL support the Using Alternative Name for tape media barcode conditions (2.5); and
5. SHALL support all the Mandatory Test Cases KMIP v1.0 (3.1).

4.5 Tape Library Server KMIP v1.1 Conformance

KMIP server implementations conformant to this profile:

1. SHALL support the Authentication Suite conditions (2.1);
2. SHALL support the Baseline Tape Library - Server conditions (2.3);
3. SHALL support the Using Application Specific Information for Key Identifiers conditions (2.4);
4. SHALL support the Using Alternative Name for tape media barcode conditions (2.5); and

317 5. SHALL support all the Mandatory Test Cases KMIP v1.1 (3.2).

318 **4.6 Tape Library Server KMIP v1.2 Conformance**

319 KMIP server implementations conformant to this profile:

- 320 1. SHALL support the Authentication Suite conditions (2.1);
- 321 2. SHALL support the Baseline Tape Library - Server conditions (2.3);
- 322 3. SHALL support the Using Application Specific Information for Key Identifiers conditions (2.4);
- 323 4. SHALL support the Using Alternative Name for tape media barcode conditions (2.5); and
- 324 5. SHALL support all the Mandatory Test Cases KMIP v1.2 (3.3).

325 **4.7 Permitted Test Case Variations**

326 Whilst the test cases provided in this Profile define the allowed request and response content, some
327 inherent variations MAY occur and are permitted within a successfully completed test case.

328 Each test case MAY include allowed variations in the description of the test case in addition to the
329 variations noted in this section.

330 Other variations not explicitly noted in this Profile SHALL be deemed non-conformant.

331 **4.7.1 Variable Items**

332 An implementation conformant to this Profile MAY vary the following values:

- 333 1. UniqueIdentifier
- 334 2. PrivateKeyUniqueIdentifier
- 335 3. PublicKeyUniqueIdentifier
- 336 4. UniqueBatchItemIdentifier
- 337 5. AsynchronousCorrelationValue
- 338 6. TimeStamp
- 339 7. KeyValue / KeyMaterial including:
 - 340 a. key material content returned for managed cryptographic objects which are generated
 - 341 by the server
 - 342 b. wrapped versions of keys where the wrapping key is dynamic or the wrapping contains
 - 343 variable output for each wrap operation
- 344 8. For response containing the output of cryptographic operation in Data / SignatureData/
345 MACData / IVCounterNonce where:
 - 346 a. the managed object is generated by the server; or
 - 347 b. the operation inherently contains variable output
- 348 9. For the following DateTime attributes where the value is not specified in the request as a fixed
349 DateTime value:
 - 350 a. ActivationDate
 - 351 b. ArchiveDate
 - 352 c. CompromiseDate
 - 353 d. CompromiseOccurrenceDate
 - 354 e. DeactivationDate
 - 355 f. DestroyDate
 - 356 g. InitialDate
 - 357 h. LastChangeDate

- 358 i. ProtectStartDate
- 359 j. ProcessStopDate
- 360 k. ValidityDate
- 361 l. OriginalCreationDate
- 362 10. LinkedObjectIdentifier
- 363 11. DigestValue
 - 364 a. For those managed cryptographic objects which are dynamically generated
- 365 12. KeyFormatType
 - 366 a. The key format type selected by the server when it creates managed objects
- 367 13. Digest
 - 368 a. The HashingAlgorithm selected by the server when it calculates the digest for a
 - 369 managed object for which it has access to the key material
 - 370 b. The Digest Value
- 371 14. Extensions reported in Query for ExtensionList and ExtensionMap
- 372 15. Application Namespaces reported in Query
- 373 16. Object Types reported in Query other than those noted as required in this profile
- 374 17. Operation Types reported in Query other than those noted as required in this profile (or any
- 375 referenced profile documents)
- 376 18. For TextString attribute values containing test identifiers:
 - 377 a. Additional vendor or application prefixes
- 378 19. Additional attributes beyond those noted in the response

379

380 An implementation conformant to this Profile MAY allow the following response variations:

- 381 20. Object Group values – May or may not return one or more Object Group values not included in
- 382 the requests
- 383 21. y-CustomAttributes – May or may not include additional server-specific associated attributes not
- 384 included in requests
- 385 22. Message Extensions – May or may not include additional (non-critical) vendor extensions
- 386 23. TemplateAttribute – May or may not be included in responses where the Template Attribute
- 387 response is noted as optional in [KMIP-SPEC]
- 388 24. AttributeIndex – May or may not include Attribute Index value where the Attribute Index value is
- 389 0 for Protocol Versions 1.1 and above.
- 390 25. ResultMessage – May or may not be included in responses and the value (if included) may vary
- 391 from the text contained within the test case.
- 392 26. The list of Protocol Versions returned in a DiscoverVersion response may include additional
- 393 protocol versions if the request has not specified a list of client supported Protocol Versions.
- 394 27. VendorIdentification - The value (if included) may vary from the text contained within the test
- 395 case.

396 4.7.2 Variable behavior

397 An implementation conformant to this Profile SHALL allow variation of the following behavior:

- 398 1. A test may omit the clean-up requests and responses (containing Revoke and/or Destroy) at the
- 399 end of the test provided there is a separate mechanism to remove the created objects during
- 400 testing.
- 401 2. A test may omit the test identifiers if the client is unable to include them in requests. This
- 402 includes the following attributes:

- 403 a. Name; and
404 b. x-ID
405 3. A test MAY perform requests with multiple batch items or as multiple requests with a single
406 batch item provided the sequence of operations are equivalent
407 4. A request MAY contain an optional *Authentication* [KMIP_SPEC] structure within each request
408

Appendix A. Acknowledgments

The following individuals have participated in the creation of this specification and are gratefully acknowledged:

Appendix C. Revision History

Revision	Date	Editor	Changes Made
wd01	27-Jun-2013	Tim Hudson / Rod Wideman / Stan Feather	Converted from draft proposal to OASIS template incorporating updates from Stan Feather and inclusion of references to KMIP 1.2 documents. Editorial and formatting cleanup.
wd02	6-August-2013	Tim Hudson	Updated to include Permitted Test Case Variations and updated Test Cases based on July 2013 Interop
wd03	8-August-2013	Stan Feather / Rod Wideman	Editorial changes to section 3
wd04	10-August-2013	Tim Hudson	Updated Permitted Test Case Variations
wd04a	24-October-2013	Tim Hudson	Editorial update to include VendorIdentification in the list of allowed variations as per TC motion.
pr01update	11-June-2014	Tim Hudson	Updated following Public Review
