

Metadata Extension for SAML V2.0 and V1.x Query Requesters

Committee Draft 02, 1 September 2006

Document identifier:

sstc-saml-metadata-ext-query-cd-02

Location:

http://www.oasis-open.org/committees/documents.php?wg_abbrev=security

Editors:

Tom Scavo, NCSA
Scott Cantor, Internet2

Contributors:

Tom Wisniewski, Entrust

Abstract:

This specification defines an extension to the SAML V2.0 metadata specification [SAML2Meta]. The extension defines role descriptor types that describe a standalone SAML V1.x or V2.0 query requester for each of the three predefined query types. Readers are advised to familiarize themselves with that specification before reading this one.

Status:

This is a **Committee Draft** approved by the Security Services Technical Committee on 28 August 2006.

Committee members should submit comments and potential errata to the security-services@lists.oasis-open.org list. Others should submit them by filling out the web form located at http://www.oasis-open.org/committees/comments/form.php?wg_abbrev=security.

For information on whether any patents have been disclosed that may be essential to implementing this specification, and any offers of patent licensing terms, please refer to the Intellectual Property Rights web page for the Security Services TC (<http://www.oasis-open.org/committees/security/ipr.php>).

45

46 1 Introduction

47 This specification defines an extension to the SAML V2.0 metadata specification. The extension defines
48 a set of role descriptor types that describe a standalone SAML query requester for each of the three
49 predefined query types. The profile addresses both SAML V1.x and SAML V2.0 query requesters.

50 Unless specifically noted, nothing in this document should be taken to conflict with the SAML V2.0
51 metadata specification [SAML2Meta]. Readers are advised to familiarize themselves with that
52 specification before reading this one.

53 1.1 Notation

54 This specification uses normative text to define an extension to the SAML V2.0 metadata specification.

55 The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD
56 NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this specification are to be interpreted as
57 described in [RFC 2119]:

58 ...they MUST only be used where it is actually required for interoperation or to limit
59 behavior which has potential for causing harm (e.g., limiting retransmissions)...

60 These keywords are thus capitalized when used to unambiguously specify requirements over protocol
61 and application features and behavior that affect the interoperability and security of implementations.
62 When these words are not capitalized, they are meant in their natural-language sense.

63 Listings of XML schemas appear like this.

64 Example code listings appear like this.

66 Conventional XML namespace prefixes are used throughout the listings in this specification to stand for
67 their respective namespaces as follows, whether or not a namespace declaration is present in the
68 example:

Prefix	XML Namespace	Comments
saml:	urn:oasis:names:tc:SAML:2.0:assertion	This is the SAML V2.0 assertion namespace defined in the SAML V2.0 core specification [SAML2Core].
md:	urn:oasis:names:tc:SAML:2.0:metadata	This is the SAML V2.0 metadata namespace defined in the SAML V2.0 metadata specification [SAML2Meta].
query:	urn:oasis:names:tc:SAML:metadata:ext:query	This is the SAML V2.0 metadata query requester extension namespace defined by this document and its accompanying schema [MDext-XSD].
xsd:	http://www.w3.org/2001/XMLSchema	This namespace is defined in the W3C XML Schema specification [Schema1]. In schema listings, this is the default namespace and no prefix is shown.
xsi:	http://www.w3.org/2001/XMLSchema-instance	This is the XML Schema namespace for schema-related markup that appears in XML instances [Schema1].
ds:	http://www.w3.org/2000/09/xmldsig#	This is the XML Signature namespace [XMLSig].

69

70 This specification uses the following typographical conventions in text: <SAMLElement>,
71 <ns:ForeignElement>, Attribute, **Datatype**, OtherKeyword.

2 Metadata Extension for SAML V2.0 and V1.x Query Requesters

This extension defines new role descriptor types that support the requester role of the three predefined SAML query types: authentication, attribute, and authorization decision.

2.1 Required Information

Identification: `urn:oasis:names:tc:SAML:metadata:ext:query`

Contact information: security-services-comment@lists.oasis-open.org

Description: Given below.

Updates: Extends the SAML V2.0 metadata specification [SAML2Meta].

2.2 Namespaces

The SAML V2.0 metadata specification [SAML2Meta] and its accompanying schema [SAML2Meta-xsd] define the following namespace:

```
urn:oasis:names:tc:SAML:2.0:metadata
```

By convention, the namespace prefix `md:` is used to refer to the above namespace.

This specification defines a new namespace:

```
urn:oasis:names:tc:SAML:metadata:ext:query
```

The prefix `query:` is used here and in the accompanying schema [MDext-XSD] to refer to this new namespace. In what follows, any unqualified element or type is assumed to belong to this new namespace.

2.3 Element `<md:RoleDescriptor>`

The `<md:RoleDescriptor>` element defined in [SAML2Meta] is an abstract extension point that contains descriptive information common across various entity roles. New roles can be defined by extending its abstract `md:RoleDescriptorType` complex type, which is the approach taken here.

2.4 Abstract Complex Type `QueryDescriptorType`

Abstract complex type `QueryDescriptorType` extends complex type `md:RoleDescriptorType` with content generally applicable to query requesters. The type `QueryDescriptorType` contains the following additional attributes and elements:

`WantAssertionsSigned` [Optional]

Optional attribute that indicates a requirement for assertions received by this requester to be signed. If omitted, the value is assumed to be `false`. This requirement is in addition to any requirement for signing derived from the use of a particular profile/binding combination.

103 <md:NameIDFormat> [Zero or More]
104 Zero or more elements of type **xsd:anyURI** that enumerate the name identifier formats
105 supported by this requester. See Section 8.3 of [SAML2Core] for some possible values of this
106 element.

107 As an abstract type, this type serves as a basis for the additional types defined in the following sections
108 and is not used in metadata instances directly.

109 The following schema fragment defines the **QueryDescriptorType** complex type:

```
110 <complexType name="QueryDescriptorType" abstract="true">  
111   <complexContent>  
112     <extension base="md:RoleDescriptorType">  
113       <sequence>  
114         <element ref="md:NameIDFormat" minOccurs="0" maxOccurs="unbounded"/>  
115       </sequence>  
116       <attribute name="WantAssertionsSigned" type="boolean" use="optional"/>  
117     </extension>  
118   </complexContent>  
119 </complexType>
```

120 2.5 Complex Type AuthnQueryDescriptorType

121 Complex type **AuthnQueryDescriptorType** extends complex type **QueryDescriptorType** into a
122 concrete type usable to represent authentication query requesters. It contains no additional elements or
123 attributes.

124 Instances of **AuthnQueryDescriptorType** are declared using the <md:RoleDescriptor> element with
125 an xsi:type of **AuthnQueryDescriptorType**.

126 See the SAML V1.x Metadata Profile [SAML1xMeta] for specifics on the transformation and use of
127 particular elements and attributes for use with SAML V1.x.

128 The following schema fragment defines the **AuthnQueryDescriptorType** complex type:

```
129 <complexType name="AuthnQueryDescriptorType">  
130   <complexContent>  
131     <extension base="md:QueryDescriptorType"/>  
132   </complexContent>  
133 </complexType>
```

134 2.6 Complex Type AttributeQueryDescriptorType

135 Complex type **AttributeQueryDescriptorType** extends complex type **QueryDescriptorType** with
136 content specific to attribute query requesters, that is, consumers of SAML attributes. The type
137 **AttributeQueryDescriptorType** contains the following additional elements:

138 <md:AttributeConsumingService> [Zero or More]
139 Zero or more elements that describe an application or service provided by this requester that
140 requires or desires the use of SAML attributes. It is RECOMMENDED that deployers provide at
141 least one such element to facilitate configuration of policy by attribute providers.

142 At most one <md:AttributeConsumingService> element can have the attribute `isDefault` set to
143 `true`. When multiple elements are specified and none has the attribute `isDefault` set to `true`, then
144 the first element whose `isDefault` attribute is not set to `false` is to be used as the default. If all
145 elements have their `isDefault` attribute set to `false`, then the first element is considered the default.

146 Instances of **AttributeQueryDescriptorType** are declared using the `<md:RoleDescriptor>` element
147 with an `xsi:type` of **AttributeQueryDescriptorType**. See the example in Section 2.8.

148 See the SAML V1.x Metadata Profile [SAML1xMeta] for specifics on the transformation and use of
149 particular elements and attributes for use with SAML V1.x.

150 The following schema fragment defines the **AttributeQueryDescriptorType** complex type:

```
151 <complexType name="AttributeQueryDescriptorType">  
152   <complexContent>  
153     <extension base="md:QueryDescriptorType">  
154       <sequence>  
155         <element ref="md:AttributeConsumingService" minOccurs="0"  
156 maxOccurs="unbounded"/>  
157       </sequence>  
158     </extension>  
159   </complexContent>  
160 </complexType>
```

161 2.7 Complex Type AuthzDecisionQueryDescriptorType

162 Complex type **AuthzDecisionQueryDescriptorType** extends complex type **QueryDescriptorType** with
163 content specific to authorization decision query requesters, that is, policy enforcement points. The type
164 **AuthzDecisionQueryDescriptorType** contains the following additional elements:

165 `<query:ActionNamespace>` [Zero or More]

166 Zero or more elements of type `xsd:anyURI` that enumerate the action namespaces supported by
167 this requester. See Section 8.1 of [SAML2Core] for some possible values of this element.

168 Instances of **AuthzDecisionQueryDescriptorType** are declared using the `<md:RoleDescriptor>`
169 element with an `xsi:type` of **AuthzDecisionQueryDescriptorType**.

170 See the SAML V1.x Metadata Profile [SAML1xMeta] for specifics on the transformation and use of
171 particular elements and attributes for use with SAML V1.x.

172 The following schema fragment defines the **AuthzDecisionQueryDescriptorType** complex type:

```
173 <complexType name="AuthzDecisionQueryDescriptorType">  
174   <complexContent>  
175     <extension base="md:QueryDescriptorType">  
176       <sequence>  
177         <element ref="query:ActionNamespace" minOccurs="0"  
178 maxOccurs="unbounded"/>  
179       </sequence>  
180     </extension>  
181   </complexContent>  
182 </complexType>
```

183 The following schema fragment defines the `<query:ActionNamespace>` element:

```
184 <element name="ActionNamespace" type="anyURI"/>
```

185 2.8 Example

186 Following is a metadata example for a SAML attribute query requester that supports both SAML V1.1
187 and SAML V2.0.

```
188 <md:EntityDescriptor  
189   xmlns:md="urn:oasis:names:tc:SAML:2.0:metadata"  
190   xmlns:saml="urn:oasis:names:tc:SAML:2.0:assertion"  
191   xmlns:ds="http://www.w3.org/2000/09/xmldsig#"
```

```

192   xmlns:xsd="http://www.w3.org/2001/XMLSchema"
193   entityID="https://gs.org/gridshib">
194   <!-- insert ds:Signature element here -->
195   <md:RoleDescriptor
196     xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
197     xmlns:query="urn:oasis:names:tc:SAML:metadata:ext:query"
198     xsi:type="query:AttributeQueryDescriptorType"
199     protocolSupportEnumeration="urn:oasis:names:tc:SAML:1.1:protocol
200 urn:oasis:names:tc:SAML:2.0:protocol">
201     <md:KeyDescriptor use="signing">
202       <ds:KeyInfo>
203         <ds:KeyName>Requester Key</ds:KeyName>
204       </ds:KeyInfo>
205     </md:KeyDescriptor>
206     <md:NameIDFormat>
207       urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName
208     </md:NameIDFormat>
209     <md:AttributeConsumingService isDefault="true" index="0">
210       <md:ServiceName xml:lang="en">
211         Shibbolized Grid Service
212       </md:ServiceName>
213       <md:RequestedAttribute
214         NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
215         Name="urn:oid:1.3.6.1.4.1.5923.1.1.1.9"
216         FriendlyName="eduPersonScopedAffiliation">
217       </md:RequestedAttribute>
218       <md:RequestedAttribute
219         NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
220         Name="urn:oid:1.3.6.1.4.1.5923.1.1.1.7"
221         FriendlyName="eduPersonEntitlement">
222         <saml:AttributeValue xsi:type="xsd:anyURI">
223           https://gs.org/gridshib/entitlements/123456789
224         </saml:AttributeValue>
225       </md:RequestedAttribute>
226     </md:AttributeConsumingService>
227   </md:RoleDescriptor>
228   <md:Organization>
229     <md:OrganizationName xml:lang="en">
230       GridShib Service Provider
231     </md:OrganizationName>
232     <md:OrganizationDisplayName xml:lang="en">
233       GridShib Service Provider @ Some Location
234     </md:OrganizationDisplayName>
235     <md:OrganizationURL xml:lang="en">
236       http://www.gs.org/
237     </md:OrganizationURL>
238   </md:Organization>
239   <md:ContactPerson contactType="technical">
240     <md:SurName>GridShib Support</md:SurName>
241     <md:EmailAddress>gridshib-support@gs.org</md:EmailAddress>
242   </md:ContactPerson>
243 </md:EntityDescriptor>

```
