Related work:
This specification is related to:
• SOA-EERP Business Rating of Service specification, Version 1.0,
• SOA-EERP Business Service Level Agreement specification, Version 1.0,

This document is one of three closely related specifications, SOA-EERP Business Quality of Service (bQoS), SOA-EERP Business Rating (bRating) and SOA-EERP Business Service Level Agreement (bSLA) which need to be understood in combination.

Declared XML Namespace(s):
http://docs.oasis-open.org/soa-eerp/bqos/200903
Abstract:
This document specifies the XML vocabulary for business quality of service (bQoS), one of three Specifications for end-to-end resource planning (EERP). Business quality of service describes the business-related characteristics or attributes of a service.

Status:
This document was last revised by the SOA-EERP TC on the above date. The level of approval is also listed above. Check the “Latest Version” or “Latest Approved Version” location noted above for possible later revisions of this document.

Technical Committee members should send comments on this specification to the Technical Committee’s email list. Others should send comments to the Technical Committee by using the “Send A Comment” button on the Technical Committee’s web page at http://www.oasis-open.org/committees/soa-eerp/.

For information on whether any patents have been disclosed that may be essential to implementing this specification, and any offers of patent licensing terms, please refer to the Intellectual Property Rights section of the Technical Committee web page (http://www.oasis-open.org/committees/soa-eerp/ipr.php).

The non-normative errata page for this specification is located at http://www.oasis-open.org/committees/soa-eerp/.

1 Introduction

This document is the specification for Business Quality of Service (bQoS) for End-to-End Resource Planning (EERP), an XML vocabulary by which a business application may communicate selected characteristics of the service it provides.

According to OASIS Reference Model for Service Oriented Architecture [SOA-RM], the Service Oriented Architecture (SOA) is a paradigm for organizing and utilizing distributed capabilities that may be under the control of different ownership domains. The service within SOA is a mechanism to enable access to one or more capabilities, where the access is provided using a prescribed interface and is exercised consistent with constraints and policies as specified by the service description. This specification further defines the Business Quality of Service for the services that is defined in SOA-RM, within the EERP technology. The applications of this specification are any kind of business services, and they are not limited to only Web Services.

EERP applies the well-known technique for service discovery, composition, simulation, and optimization techniques in a novel way to improve business results. It models the business process and the range of potential services, and then guides the selection and deployment of services based on the end-to-end business value.

Modeling the business characteristics of a service is a prerequisite for estimating the business value of the process that uses those services. The business characteristics of the service defined in this bQoS specification will enable EERP to determine the varieties of optimization to be supported, and to select optimal end-to-end solution.

In contrast to the QoS in the software/IT world, where the message is network/system oriented measurement indicates that deals with network performance and system availability, the contents of bQoS in this specification is business oriented measurement indicators that deals with business characteristics of a service, such as price, performance, and quality.

1.1 Terminology

The key words “MUST”, “MUST NOT”, “REQUIRED”, “SHALL”, “SHALL NOT”, “SHOULD”, “SHOULD NOT”, “RECOMMENDED”, “MAY”, and “OPTIONAL” in this document are to be interpreted as described in [RFC2119].

1.1.1 Notational Conventions

This specification uses the following syntax to define outlines for detailed elements:

- The syntax appears as an XML instance, but values in italics indicate data types instead of literal values.
- Characters are appended to elements and attributes to indicate cardinality:
  - "?" (0 or 1)
  - "*" (0 or more)
  - "+" (1 or more)
- The character "]" is used to indicate a choice between alternatives.
- The characters "(" and ")" are used to indicate that contained items are to be treated as a group with respect to cardinality or choice.
- The characters "[" and "]" are used to call out references and property names.
- Ellipses (i.e., "...") indicate points of extensibility. Additional children and/or attributes MAY be added at the indicated extension points but MUST NOT contradict the semantics of the parent and/or owner, respectively. By default, if a receiver does not recognize an extension, the receiver
SHOULD ignore the extension; exceptions to this processing rule, if any, are clearly indicated
below.

- XML namespace prefixes (see Table 21) are used to indicate the namespace of the element
being defined.

Elements and Attributes defined by this specification are referred to in the text of this document using
XPath 1.0 expressions. Extensibility points are referred to using an extended version of this syntax:

- An element extensibility point is referred to using {any} in place of the element name. This
indicates that any element name can be used, from any namespace other than the namespace of
this specification.

- An attribute extensibility point is referred to using @{any} in place of the attribute name. This
indicates that any attribute name can be used, from any namespace other than the namespace of
this specification.

Extensibility points in the exemplar may not be described in the corresponding text.

### 1.2 Normative References

- [RFC2119] S. Bradner, *Key words for use in RFCs to Indicate Requirement Levels*,
  http://www.w3.org/TR/2000/NOTE-SOAP-20000508/
  http://www.w3.org/TR/2003/REC-soap12-part1-20030624/
  http://www.ietf.org/rfc/rfc3986.txt
  http://docs.oasis-open.org/ubl/os-UBL-2.0/UBL-2.0.pdf
- [UBL-20-cbc] Universal Business Language (UBL) v2.0, Common Basic Components,
  October 2006
  http://docs.oasis-open.org/ubl/os-UBL-2.0/xsd/common/UBL-
  CommonBasicComponents-2.0.xsd

  February 2005
  http://docs.oasis-open.org/ubl/os-UBL-
  2.0/xsd/common/UnqualifiedDataTypeSchemaModule-2.0.xsd
  http://www.w3.org/TR/2004/REC-xmlschema-1-20041028/
1.2.1 Reference

In this document reference is made to some basic elements and data types in UBL 2.0, in the following schema:

- UBL 2.0 Common Basic Components [UBL-2-0-cbcUBL-2-0-cbc], UBL-CommonBasicComponents-2.0.xsd
- UBL 2.0 Unqualified Data Type [UBL-2-0-udtUBL-2-0-udt], UnqualifiedDataTypeSchemaModule-2.0.xsd

This specification is designed to work with the general Web Services framework including WSDL service descriptions, and SOAP message structure and message processing model. The XML vocabulary defined in bQoS should be applicable to any version of SOAP.

1.3 Non-Normative References

None.
2 Quality Measurement Indicators

The Business Quality of Service (BQoS) of the XML vocabulary is defined in XML Schema format that defines many quality measurement indicators.

2.1 Namespaces

The XML namespace URI that MUST be used by implementations of this specification is:

```
http://docs.oasis-open.org/ns/soa-eerp/bqos/200903
```

Table 2 lists XML namespaces that are used in this specification. The choice of any namespace prefix is arbitrary and not semantically significant.

<table>

<td>This specification</td>
</tr>
</tbody>
</table>

2.2 Schema Files

A normative copy of the XML Schema [XML-Schema1, XML-Schema2][XML-Schema1, XML-Schema2] description for this specification can be retrieved from the following address:

```
http://docs.oasis-open.org/soa-eerp/eerp-bqos/200903/eerp-bqosv1.0/EERP-bQoS-cd04.xsd
```

2.3 BQoS Element

The BQoS is the root element for the Business Quality of Service schema. It can have one or more of the following elements:

- BQoSPrice indicates price or cost for the service
- BQoSPerformance indicates time to complete the service, or in the alternative, throughput and latency.
• BQoSQualities indicates additional properties and attributes.

• Any additional elements for quality of service can be either:
  o Technical aspect such as service availability, accessibility, integrity, reliability, and security; or
  o Business aspects such as regulatory, geo location, operation hours, and payment methods.

Syntax

```xml
<bqos:BQoS xmlns:bqos="..." ...>
  <bqos:BQoSPrice ...>
    <bqos:BQoSPriceType/>
  </bqos:BQoSPrice>
  <bqos:BQoSPerformance ...>
    <bqos:BQoSPerformanceType/>
  </bqos:BQoSPerformance>
  <bqos:BQoSQualities ...>
    <bqos:BQoSQualitiesType/>
  </bqos:BQoSQualities>
...</bqos:BQoS>
```

The following describes the attributes and elements listed in the schema outlined above:

/bqos:BQoS

The root element for BQoS

/bqos:BQoS/bqos:BQoSPrice

Price aspect of the service, including the price and other optional elements, see Section 3 for more details.

/bqos:BQoS/bqos:BQoSPrice/@{any}

This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the BQoSPrice element in the future. Unrecognized attributes MAY cause a fault or be silently ignored.

/bqos:BQoS/bqos:BQoSPerformance

Performance aspect of the service that has time period for the time to complete the whole service, the throughput for duration to complete number of jobs, or optional elements, see Section 4 for more details.

/bqos:BQoS/bqos:BQoSPerformance/@{any}

This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the BQoSPerformance element in the future. Unrecognized attributes MAY cause a fault or be silently ignored.

/bqos:BQoS/bqos:BQoSQualities

Quality aspect of the service that has additional properties and attributes to describe the quality of the service, see Section 5 for more details.

/bqos:BQoS/bqos:BQoSQualities/@{any}

This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the BQoSQualities element in the future. Unrecognized attributes MAY cause a fault or be silently ignored.

/bqos:BQoS/@{any}

This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the BQoS element in the future. Unrecognized attributes MAY cause a fault or be silently ignored.

/bqos:BQoS/bqos:BQoSExtension

BQoSExtension element is an optional element that keeps different (extensible) elements to be specified in the future.

/bqos:BQoS/bqos:BQoSExtension/@{any}
This is an extensibility mechanism to allow different (extensible) elements to be specified in the future. Unrecognized elements MAY cause a fault or be silently ignored.
3 BQoSPrice

BQoSPrice, the Price element for bQoS, describes the price for the service. Price can be expressed in various ways. There SHOULD be one BQoSPrice element present in the business quality of service.

Syntax

```xml
<bqos:BQoSPrice xmlns:bqos="..." ...>
  <bqos:Price>
    <bqos:Unit unitCode="clm66411:UnitCodeContentType">
      <cbc:BaseUnitMeasureType/>
    </bqos:Unit>
    <bqos:Amount currencyID="clm54217:CurrencyCodeContentType">
      <cbc:AmountType/>
    </bqos:Amount>
  </bqos:Price>
</bqos:BQoSPrice>
```

The following describes the attributes and elements listed in the schema outlined above:

- `/bqos:BQoS/bqos:BQoSPrice` Price aspects of the service, including the price and other optional elements
- `/bqos:BQoS/bqos:BQoSPrice/bqos:Price` Price element that represent the single price for BQoSPrice
- `/bqos:BQoS/bqos:BQoSPrice/bqos:Price/bqos:Unit` Number of units is a option element that includes the unit of measurement using cbc:BaseUnitMeasureType
- `/bqos:BQoS/bqos:BQoSPrice/bqos:Price/bqos:Amount` Amount is a required element in the Price element. It uses cbc:AmountType from UBL that has a required currencyID attribute for currency code.
- `/bqos:BQoS/bqos:BQoSPrice/{any}` This is an extensibility mechanism to allow different (extensible) price elements to be specified in the future. Unrecognized elements MAY cause a fault or be silently ignored.

Example

The following non-normative example illustrates the use of bQoS price element. It describes 10 units for price of $171.50 US dollar:

```xml
(001) <?xml version="1.0" encoding="utf-8"?>
(002) <BQoSPrice xmlns="..." ...>
(003)   <Price>
(004)     <Unit unitCode="EA">10</Unit>
(005)     <Amount currencyID="USD">171.50</Amount>
(006)   </Price>
</bqos:BQoSPrice>
```
4 BQoSPerformance

BQoSPerformance element for bQoS is the quality of service measured in the time to complete, or alternatively as throughput and latency.

There MAY be zero or one BQoSPerformance element present in the business quality of service.

Syntax

```xml
<bqos:BQoSPerformance xmlns:bqos="..." ...>
  <bqos:TimePeriod ... >bqos:TimePeriodType
    <bqos:Duration
      unitCode="clm66411:UnitCodeContentType">cbc:DurationMeasureType</bqos:Duration
    >
    <bqos:Latency
      unitCode="clm66411:UnitCodeContentType">cbc:DurationMeasureType</bqos:Latency
    > ?
    <bqos:StartTime>udt:DateTimeType</bqos:StartTime> ?
  </bqos:TimePeriod> |
  <bqos:Throughput ...>
    <bqos:Quantity unitCode="clm66411:UnitCodeContentType"> ...
    </bqos:Quantity>
    <bqos:Duration unitCode="clm66411:UnitCodeContentType">cbc:DurationMeasureType</bqos:Duration>
    <bqos:Latency unitCode="clm66411:UnitCodeContentType">cbc:DurationMeasureType</bqos:Latency> ?
  </bqos:Throughput> |
  ...
</bqos:BQoSPerformance>
```

The following describes the attributes and elements listed in the schema outlined above:

/bqos:BQoS/bqos:BQoSPerformance

- Performance aspect of the service that has time period for the time to complete the whole service job, the throughput for duration to complete number of jobs, or an optional elements.

/bqos:BQoS/bqos:BQoSPerformance/bqos:TimePeriod

- TimePeriod is the time period to complete the service, including the duration to complete the service, and optional elements for start time and latency.

/bqos:BQoS/bqos:BQoSPerformance/bqos:TimePeriod/bqos:Duration

- Duration element is a required element in the TimePeriod element which is the duration to complete the service. It uses cbc:DurationMeasureType from UBL that has a required unitCode attribute for unit of measurement on the time.

- Unit of measurement in cbc:BaseUnitMeasureType. It is a required attribute for the duration time, such as Second, Minute, Hour, Day, Week, etc. using clm66411:unitCodeContentType, xmlns:clm66411="urn:un:unece:uncefact:codelist:specification:66411:2001".

- StartTime is an optional element for the date and time to start the service. It uses udt:DateTimeType which is in UTC time format [ISO8601].

/bqos:BQoS/bqos:BQoSPerformance/bqos:TimePeriod/bqos:Latency

- Latency is an optional element that describes the time delay before a service is expected to begin. It uses cbc:DurationMeasureType from UBL that has a required unitCode attribute for unit of measurement on the time.
Unit of measurement in cbc:BaseUnitMeasureType. It is a required attribute for the duration time, such as Second, Minute, Hour, Day, Week, etc., using clm66411:unitCodeContentType, xmlns:clm66411="urn:un:unece:uncefact:codelist:specification:66411:2001".

Throughput element is a required element in the Throughput element. This is the duration to complete the service. It uses cbc:DurationMeasureType from UBL that has a required unitCode attribute for unit of measurement on the time.

Quantity is a required element in the Throughput element. It is the numbers for the throughput, with an attribute of unit of measurement, such as EA, pounds, cubic-feet, etc.

Latency is an optional element for the time delay for starting the service. It uses cbc:DurationMeasureType from UBL that has a required unitCode attribute for unit of measurement on the time.

This is an extensibility mechanism to allow different (extensible) performance or time elements to be specified in the future. Unrecognized elements MAY cause a fault or be silently ignored.

Example

The following non-normative example illustrates the use of bQoS Performance element using the Throughput element instead of TimePeriod element. It describes the throughput of 10 units per day:

```xml
<?xml version="1.0" encoding="utf-8"?>
<BQoSPerformance xmlns="..." ...>
   <Throughput>
      <Duration unitCode="DAY">1</Duration>
      <Quantity unitCode="EA">10.0</Quantity>
   </Throughput>
</BQoSPerformance>
```

The following non-normative example illustrates the use of bQoS Performance element using the TimePeriod element. It describes the 8 hours of the duration, and can be started on October 17, 2009, 9:30:47.02 Zulu time:

```xml
<?xml version="1.0" encoding="utf-8"?>
<BQoSPerformance xmlns="..." ...>
   <TimePeriod unitCode="HOUR">8</TimePeriod>
   <Latency unitCode="SECOND">0</Latency>
</BQoSPerformance>
```
<BQoSPerformance xmlns="..." ...>
  <TimePeriod>
    <Duration unitCode="HUR">8</Duration>
    <StartTime>2009-10-17T09:30:47.0Z</StartTime>
  </TimePeriod>
</BQoSPerformance>
5 BQoSQualities

The BQoSQualities, the Quality elements for bQoS, describes additional properties and attributes for the service. While any quality name/value can be asserted by a Service Provider to represent the quality of the service, this specification is not addressing issues of namespace management for qualities beyond the three pre-defined EERP namespaces.

There SHOULD be zero or one BQoSQualities element present in the business quality of service.

Syntax

```xml
<bqos:BQoSQualities xmlns:bqos="..." ...>
  <bqos:Property>
    <bqos:PropertyName ...>bqos:PropertyName</bqos:PropertyName>
    <bqos:PropertyValue ...>bqos:PropertyValue</bqos:PropertyValue> ?
  </bqos:Property> +
  ...
</bqos:BQoSQualities>
```

The following describes the attributes and elements listed in the schema outlined above:

/bqos:BQoS/bqos:BQoSQualities

Quality aspect of the service is measured in terms of additional properties and attributes. It has a list of property for BQoSQualities and other optional elements.

/bqos:BQoS/bqos:BQoSQualities/bqos:Property

Property element is for additional property or attribute for quality measurement of the service in bQoS that has name and value pair to describe the quality of the service.

/bqos:BQoS/bqos:BQoSQualities/bqos:PropertyName

Property name is a required element for the name in the name and value pair in the Property element. It uses bqos:PropertyNameType which is a cbc:NamType from UBL that has a optional languageID attribute for language code.

/bqos:BQoS/bqos:BQoSQualities/bqos:Property/bqos:PropertyName/@languageID

/bqos:BQoS/bqos:BQoSQualities/bqos:Property/bqos:PropertyName/@{any}

This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the PropertyName element in the future. Unrecognized attributes MAY cause a fault or be silently ignored.

The property value is an optional element for the value in the name and value pair in the Property element. It uses bqos:PropertyValueType which is a cbc:NamType from UBL that has a optional languageID attribute for language code.

/bqos:BQoS/bqos:BQoSQualities/bqos:Property/@{any}

This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the Property element in the future. Unrecognized attributes MAY cause a fault or be silently ignored.
This is an extensibility mechanism to allow different (extensible) properties or attributes to be specified in the future. Unrecognized elements MAY cause a fault or be silently ignored. For example, one or more /bqos:BQoS/bqos:BQoSQualities/Performance:QualityAssertion elements can be placed in here for the Service Provider to assert the specific Qualities of its services.

Example

The following non-normative example illustrates the use of bQoS price element. It describes the Class is Golden and it has “Network Connection” as additional property for this service:

```
<xml version="1.0" encoding="utf-8"?>
<BQoSQualities xmlns="..." ...>
   <Property>
     <PropertyName languageID="EN">Class</PropertyName>
     <PropertyValue>Golden</PropertyValue>
   </Property>
   <Property>
     <PropertyName languageID="EN">Network Connection</PropertyName>
     <PropertyValue>Golden</PropertyValue>
   </Property>
</BQoSQualities>
```
6 BQoS Examples

The examples in this section are non-normative.

6.1 Service Price with a Batch of Products Examples

This BQoS example will show the following quality indicators:

1. The service price is CNY 120000 per service, including 1000 gas-meters for one batch.
2. The throughput is usually 1 week or 7 days for the service. In another words, it will cost 1 week or 7 days to provide and delivery 1000 gas-meters as one batch of product.
3. The service has additional attributes to provide the IC card gas-meters integrated with iron IC-card box for the quality indicators.

Example

The following example illustrates the whole BQoS document for quality indicators:

```
<?xml version="1.0" encoding="UTF-8"?>
<bqos:BQoS xmlns:bqos="..." ...>
  <bqos:BQoSPrice>
    <bqos:Price>
      <bqos:Unit unitCode="EA">1000</bqos:Unit>
      <bqos:Amount currencyID="CNY">120000</bqos:Amount>
    </bqos:Price>
  </bqos:BQoSPrice>
  <bqos:BQoSPerformance>
    <bqos:Throughput>
      <!-- delivery: 1 week -->
      <bqos:Duration unitCode="DAY">7</bqos:Duration>
      <bqos:Quantity>1000</bqos:Quantity>
      <bqos:Latency unitCode="DAY">0</bqos:Latency>
    </bqos:Throughput>
  </bqos:BQoSPerformance>
  <bqos:BQoSQualities>
    <bqos:Property>
      <bqos:PropertyName languageID="zh-cn">壳外</bqos:PropertyName>
      <bqos:PropertyValue languageID="zh-cn">壳外</bqos:PropertyValue>
    </bqos:Property>
    <bqos:Property>
      <bqos:PropertyName languageID="en">MeterType</bqos:PropertyName>
      <bqos:PropertyValue languageID="en">IC card gas-meter</bqos:PropertyValue>
    </bqos:Property>
    <bqos:Property>
      <bqos:PropertyName languageID="en">IC-Card-Box</bqos:PropertyName>
      <bqos:PropertyValue languageID="en">integrated</bqos:PropertyValue>
    </bqos:Property>
  </bqos:BQoSQualities>
</bqos:BQoS>
```

6.2 Storage Service Examples

This BQoS example will show a storage service with the following quality indicators:

1. The storage service price is 600 Euro in total.
2. The time period for the storage service is 4 day, starting from July 15, 2009, 16:30, UTC time.
3. The service has additional attributes of internet tracking and temperature from 70 to 85 degree Fahrenheit the quality indicators.

Example

The following example illustrates the storage service bQoS for quality indicators:

```xml
<?xml version="1.0" encoding="UTF-8"?>
<bqos:BQoS xmlns:bqos="..."...>
  <BQoSPrice>
    <Price>
      <Amount currencyID="EUR">600</Amount>
    </Price>
  </BQoSPrice>
  <BQoSPerformance>
    <TimePeriod>
      <Duration unitCode="DAY">4</Duration>
      <StartTime>2009-07-15T16:30:00.0Z</StartTime>
    </TimePeriod>
    <BQoSQualities>
      <Property>
        <PropertyName>Internet Tracking</PropertyName>
      </Property>
      <Property>
        <PropertyName>Temperature</PropertyName>
        <PropertyValue>70F-78F</PropertyValue>
      </Property>
    </BQoSQualities>
  </BQoSPerformance>
</bqos:BQoS>
```
7 Conformance

An implementation conforms to this specification if it satisfies all of the MUST or REQUIRED level requirements defined within this specification. A SOAP Node MUST NOT use the XML namespace identifier for this specification (listed in Section 1.1) within SOAP Envelopes unless it is compliant with this specification.

This specification references a number of other specifications (listed in Section 1.4.2). In order to comply with this specification, an implementation MUST implement the portions of referenced specifications necessary to comply with the required provisions of this specification. Additionally, the implementation of the portions of the referenced specifications that are specifically cited in this specification MUST comply with the rules for those portions as established in the referenced specification.

Normative text within this specification takes precedence over normative outlines (as described in section 1.4.1), which in turn take precedence over the XML Schema [XML Schema Part 1, Part 2] and WSDL [WSDL 1.1] descriptions. That is, the normative text in this specification further constrains the schemas and/or WSDL that are part of this specification; and this specification contains further constraints on the elements defined in referenced schemas.

The minimum set of information exchange for bQoS that would allow conforming applications to exchange information and satisfy the conformance should at least have

'/bqos:BQoS/bqos:BQoSPrice/bqos:Price/bqos:Amount element, like this:

A nearly empty artifact does not conform to this specification. The following are three non-conform examples.

Non-conform example 1:

Non-conform example 2:

Non-conform example 3:
This specification defines a number of extensions; compliant services are NOT REQUIRED to implement those extensions defined in this specification. However, if a service implements an aspect of the specification, it MUST comply with the requirements specified (e.g. related "MUST" statements). If an implementation silently ignores unrecognized attributes where any attribute is allowed, or silently ignores unrecognized elements where any element is allowed, it **should be considered as an** interoperable implementation.
