**Technical Committee:**

[OASIS Transformational Government Framework TC](#)

**Chair:**

John Borrás ([johnaborras@yahoo.co.uk](mailto:johnaborras@yahoo.co.uk)), Individual

**Editors:**

Peter F Brown ([peter@peterfbrown.com](mailto:peter@peterfbrown.com)), Individual

Chris Parker ([chris.parker@cstransform.com](mailto:chris.parker@cstransform.com)), [CS Transform Limited](#)

**Abstract:**

This Primer is intended to serve as an introduction to and detailed overview of the “Transformational Government Framework” (TGF) - a practical “how to” standard

This is a Non-Standards  
Track Work Product. The  
patent provisions of the  
OASIS IPR Policy do not  
apply.

for the design and implementation of an effective program of technology-enabled change at national, state or local government level.

It also covers the Framework's rationale, purpose, scope, and intended use.

The Framework is a managed process of ICT-enabled change in the public sector, which puts the needs of citizens and businesses at the heart of that process and which achieves significant and transformational impacts on the efficiency and effectiveness of government.

The Primer is in three main parts:

- Part I, including an **Introduction** and **Overview**, sets out the context in which the TGF has been produced, its purpose, and the principal users at whom the Framework is aimed.
- Part II describes the **Transformational Government Framework** itself, including the conformance criteria by which users of the Framework may determine if they are conformant.
- Part III provides a set of **Guidance Notes** providing further information to users of the TGF on how they can implement it in practice.

#### Status:

This document was last revised or approved by the OASIS Transformational Government Framework TC on the above date. The level of approval is also listed above. Check the "Latest version" location noted above for possible later revisions of this document.

Technical Committee members should send comments on this document to the Technical Committee's email list. Others should send comments to the Technical Committee by using the "[Send A Comment](#)" button on the Technical Committee's web page at <http://www.oasis-open.org/committees/tgf/>.

## 1 Part I: Introduction to the Framework

2 Part I covers:

- 3 • The **context** and historical background for Transformational Government;
- 4 • The **definition** of Transformational Government in this context;
- 5 • The **purpose** of the Transformational Government Framework (TGF);
- 6 • The **audience**, intended primary and secondary users, of the Framework;
- 7 • An **overview** with top-level description of the key components of the TGF with context on why
- 8 each is important.

### 9 Context

10 All around the world, governments at national, state, and local levels face huge pressure to do “more  
11 with less”. Whether their desire is: to raise educational standards to meet the needs of a global  
12 knowledge economy; to help our economies adjust to financial upheaval; to lift the world out of  
13 poverty when more than a billion people still live on less than a dollar a day; to facilitate the  
14 transition to a sustainable, inclusive, low-carbon society; to reduce taxation; or to cut back on public  
15 administration; every government faces the challenge of achieving their policy goals in a climate of  
16 increasing public expenditure restrictions.

17 Responding effectively to these challenges will mean that governments need to deliver change which  
18 is transformational rather than incremental.

19 During much of the last two decades, technology was heralded as providing the key to deliver these  
20 transformations. Now that virtually every government is an "e-Government" - with websites,  
21 e-services and e-Government strategies proliferating around the world, even in the least  
22 economically developed countries - it is now clear that Information and Communication  
23 Technologies (ICT) are no “silver bullet”. The reality of many countries' experience of e-Government  
24 has instead been duplication of ICT expenditure, wasted resources, no critical mass of users for  
25 online services, and limited impact on core public policy objectives.

26 An increasing number of governments and institutions are now starting to address the much broader  
27 and more complex set of cultural and organizational changes which are needed if ICT is to deliver  
28 significant benefits in the public sector. Countries such as the UK, Canada and Australia have all  
29 recently published strategies which shift decisively away from "e-Government" towards a much  
30 more radical focus on transforming the whole relationship between the public sector and users of  
31 public services. In the same vein, the European Commission has updated and published its ‘European  
32 Interoperability Framework’ (EIF)<sup>1</sup> and several US agencies are looking to update and consolidate the  
33 ‘Federal Enterprise Architecture’ (FEA)<sup>2</sup> into a new ‘Unified Government Enterprise Architecture  
34 Framework’ (UGEAF).

35 We call this process: **Transformational Government**

---

## 36 Defining Transformational Government

37 The definition of Transformational Government used here and in the Framework is

### 38 **Transformational Government**

39 *A managed process of ICT-enabled change in the public sector, which puts the needs*  
40 *of citizens and businesses at the heart of that process and which achieves significant*  
41 *and transformational impacts on the efficiency and effectiveness of government.*

42 This definition deliberately avoids describing some perfect “end-state” for government. That is not  
43 the intent of the Transformational Government Framework. All governments are different: the  
44 historical, cultural, political, economic, social and demographic context within which each  
45 government operates is different, as is the legacy of business processes and technology  
46 implementation from which it starts. So the Transformational Government Framework is not a “one-  
47 size-fits-all” prescription for what a government should look like in future.

48 Rather, the focus is on the **process** of transformation: how a government can build a new way of  
49 working which enables it rapidly and efficiently to adapt to changing citizen needs and emerging  
50 political and market priorities. In the words of one of the earliest governments to commit to a  
51 transformational approach: “... *the vision is not just about transforming government through*  
52 *technology. It is also about making government transformational through the use of technology*”<sup>3</sup>,

53 A full understanding of this definition of Transformational Government can also be assisted by  
54 focusing on the four major ways in which Transformational Government programs differ from  
55 traditional e-Government programs:

- 56 • They take a whole-of-government view of the relationship between the public sector and the  
57 citizen or business user
- 58 • They include initiatives to e-enable the frontline of public services: that is, staff involved in direct  
59 personal delivery of services such as education and healthcare - rather than just looking at  
60 transactional services which can be e-enabled on an end-to-end basis
- 61 • They take a whole-of-government view of the most efficient way of managing the cost base of  
62 government
- 63 • They focus less on service customers as passive recipients of services and more with citizens and  
64 businesses as owners of and participants in the creation of public services.

65 Each of these defining aspects of Transformational Government is explored in more detail below.

### 66 *Transforming services around the citizen and business user*

67 Most governments are structured around a set of vertically-integrated silos or stovepipes - agencies,  
68 departments, ministries. By and large, it is these silos which the Governments of developed countries  
69 have spent billions of dollars “e-enabling” since the 1990s. However, this is an ICT investment  
70 strategy which is fundamentally not customer-focused, because the needs of citizens, businesses and  
71 others cut across the organisational structures and hierarchies of government. It has inevitably  
72 resulted in low levels of take-up for e-services. Governments in developed countries are now  
73 grappling with the legacy of thousands of fragmented, silo-focused websites: more than 270,000 in  
74 the US public sector, 9,000 in Germany, and 3,000 in the UK. An increasing number of governments

---

<sup>3</sup> See the UK Government’s white paper “Transformational Government – enabled by technology”, Cabinet Office, 2005

75 are now seeking to make a fundamental strategic shift, towards a holistic, customer-centred  
76 approach, driven at the whole-of-government level.

77 This shift includes, in leading countries, a move to a customer-centric "one-stop service" delivered  
78 over multiple channels.

79 "One-stop service" as used in the TGF does not imply that all government services need to be  
80 brought together in one physical place or website. Typically, a one-stop service brings together the  
81 majority of content and services used by the majority of people, leaving more specialist services to  
82 engage with their customers either through service-specific channels or through one-stop services  
83 focused on specific clusters or sectors of customer need

#### 84 *e-Enabling the frontline*

85 Traditional e-Government has focused on e-enabling transactional services and providing online  
86 content. The great majority of public sector staff and expenditure is not however involved in such  
87 services, but rather in "front line" delivery: teachers, healthcare workers, police, court officials,  
88 emergency response teams, etc. Leading governments are beginning to understand how the work of  
89 such front line staff can be transformed through the use of real-time knowledge management and  
90 mobile workflow applications.

#### 91 *Empowering Stakeholders*

92 People's experience of new technologies is shaped by the best that the private sector has to offer  
93 globally and - increasingly - through the ability to co-create content and services as individuals or in  
94 peer-to-peer networks. They will demand ever greater interactivity and ownership in their  
95 relationship with public services. Transformational Government programs embrace this. Where  
96 traditional e-Government programs focused on the user as "the customer", Transformational  
97 Government enhances the relationship between government, citizen, and business on a richer, more  
98 reciprocated, and more empowering basis.

#### 99 *Cross-government efficiency*

100 The silo-based approach to ICT investment typical of much e-Government has not only resulted in  
101 "un-customer-centric" services (as discussed above), but also in duplication and inefficiency.  
102 Governments have "reinvented the wheel" in ICT terms - over and over again - with different  
103 agencies each:

- 104 • maintaining their own databases, even for universal data sets such as customer identity,  
105 addresses and so forth;
- 106 • building bespoke applications for e-service functions common to all or many agencies (such as  
107 payments in and out, eligibility, notification, and authentication), as well as for common business  
108 processes such as HR and Financial Management; and
- 109 • doing so in ways which not only duplicate expenditure, but which also will not inter-operate with  
110 other agencies - making it more difficult and expensive to move towards inter-agency  
111 collaboration in future.

112 A key focus of Transformational Government is therefore to move towards a service-oriented and  
113 building-block approach to ICT and back-office service architecture across all parts of government -  
114 reaping efficiency gains while at the same time enabling better, more customer-focused service

115 delivery. As “cloud computing” gains traction and momentum, this approach opens up even greater  
116 scope to achieve large-scale efficiency savings while simultaneously improving organizational agility.

## 117 Purpose of the Transformational Government Framework

118 Delivering this degree of change is not straight-forward for government. Indeed, government faces  
119 unique challenges in delivering transformational change, notably:

- 120 • the unparalleled breadth and depth of its service offering;
- 121 • the fact that it provides a universal service, engaging with the whole population rather than  
122 picking and choosing its customers;
- 123 • structures, governance, funding & culture which are all organized around specific business  
124 functions, not around meeting customer needs in a holistic way.

125 The time is now right to set out a clear standardized framework within which governments can  
126 overcome these challenges to deliver genuinely transformational ICT-enabled change in the public  
127 sector. Against the background, the purpose of the Transformational Government Framework is

### 128 **Transformational Government Framework: purpose**

129 *In the increasingly common situation of governments being expected to deliver*  
130 *better and more services for less cost whilst maintaining high-level oversight and*  
131 *governance, the Transformational Government Framework provides a framework*  
132 *for designing and delivering an effective program of technology-enabled change at*  
133 *all levels of government.*

## 134 Target audience for the Transformational Government Framework

135 The Transformational Government Framework (TGF) is intended primarily to meet the needs of:

- 136 • Political and administrative leaders responsible for shaping public sector reform and  
137 e-Government strategies and policies (at national, state/regional and city/local levels);
- 138 • Senior executives in industry who wish to partner with and assist governments in the  
139 transformation of public services and to ensure that the technologies and services which the  
140 private sector provides can have optimum impact in terms of meeting public policy objectives
- 141 • Service and technology solution providers to the public sector.

142 Secondary audiences for the Transformational Government Framework include:

- 143 • Leaders of international organisations working to improve public sector delivery, whether at a  
144 global level (e.g. World Bank, United Nations) or a regional one (e.g. European Commission,  
145 ASEAN<sup>4</sup>, IADB<sup>5</sup>)
- 146 • Professional bodies that support industry sectors by the development and maintenance of  
147 common practices, protocols, processes and standards to facilitate the production and operation  
148 of services and systems within the sector, where the sector needs to interact with government  
149 processes and systems.
- 150 • Academic and other researchers working in the field of public sector reform.
- 151 • Civil society institutions engaged in debate on how technology can better enable service  
152 transformation.

<sup>5</sup> The Inter-American Development Bank

## 153 Overview of the Transformational Government 154 Framework

155 There are four main components to the Framework:

- 156 • Guiding Principles
- 157 • Delivery Frameworks
- 158 • Critical Success Factors and
- 159 • A Benefits Realisation Framework

### 160 Component 1: Guiding Principles for Transformation

161 As discussed above, a “one-size-fits-all” approach to public sector reform does not work.  
162 Nevertheless, there are some guiding principles which 10-15 years of experience with e-enabled  
163 government around the world suggests are universal. They are based on the experience of many  
164 OASIS member organizations working with governments of all kinds, all around the world, and they  
165 form the heart of the Framework.

166 In the Transformational Government Framework, we use the term “principle” to mean an enduring  
167 statement of values which can used on a consistent basis to steer business decision making over the  
168 long term.

169 The principles used in the TGF are detailed in Part II below.

### 170 Component 2: Service Delivery Processes

171 The TGF includes four major delivery processes within government, all of which need refocusing in a  
172 customer-centric way in order to deliver genuinely transformational impact:

- 173 • business management,
- 174 • customer management,
- 175 • channel management, and
- 176 • technology management based on the principles of service-oriented architecture.

177 Part II of the Primer below describes frameworks for each of these areas, and Part III gives further  
178 guidance on how to implement them.

### 179 Component 3: Critical Success Factors

180 Programs and projects which seek to deliver Transformational Government face significant risks to  
181 successful delivery. Typically, these risks are not related to the technology itself – which is largely  
182 mature and proven – but rather to business and cultural changes. Such changes are needed within  
183 government to deliver the business management, customer management and channel management  
184 transformations described in Component 3 of the TGF.

185 However, there is now an increasing body of research which seeks to understand why some  
186 ICT-enabled transformation programs succeed and why others fail. The TGF therefore includes nine  
187 Critical Success Factors that reflect and respond to the findings of such research, validated with  
188 OASIS members around the world. These Critical Success Factors need to be taken on board by any  
189 government seeking to develop and deliver an effective Transformational Government program.

## 190 Component 4: Benefits Realisation Framework

191 The Benefits Realisation Framework is needed to ensure that the Transformation Government  
192 program ultimately delivers all of its intended benefits and impacts in practice. Logically, the design  
193 and delivery of a Benefits Realisation Strategy is a part of the Business Management task, and is a  
194 core responsibility for the Transformational Government Leadership and the collaborative  
195 stakeholder governance model described in the TGF Business Management Framework. It is of such  
196 vital importance however that it is highlighted as a distinct component of the overall Framework.

197 ICT projects in government (and indeed in the private sector) do not automatically deliver benefits.  
198 Governments historically have fallen into two pitfalls which have hindered full benefits realisation:

- 199 • **Failure to pro-actively manage the downstream benefits after an individual ICT project has**  
200 **been completed.** Often, ICT projects are seen as “completed” once the technical  
201 implementation is initially operational. In order to reap the full projected benefits (efficiency  
202 savings, customer service improvements etc.), on-going management is essential, often involving  
203 significant organizational and cultural changes. A study for the European Commission<sup>6</sup> calculated  
204 that, as a rule of thumb, organizational change accounts for 55% of the full costs of  
205 e-Government projects in Europe, while ICT only accounts for 45%. Yet these organisational  
206 change costs are often not fully factored in or delivered, resulting in a failure to maximize the  
207 potential benefits of the ICT investments.
- 208 • **Failure at a whole-of-Government level to undertake the restructuring of the public labour**  
209 **market to take advantage of new efficiencies.** Effective delivery of e-Government services –  
210 both externally in service delivery to citizens and businesses and internally in modernising the  
211 operations of government – opens up the potential to reduce significantly the cost of  
212 government. As the cost of delivering government services falls, so governments need to plan  
213 and implement the necessary restructuring of the public sector labour market to realize  
214 efficiency benefits in the traditional paper-based channels. These efficiency savings can then  
215 either be returned to the tax payer in the form of lower taxes, or recycled into priority front-line  
216 public services such as health and education. A study by the OECD in 2006<sup>7</sup> showed that this  
217 “whole-of-government” approach to efficiency savings had until that point been a feature of  
218 only a few countries, notably Canada, the UK and Finland. Increasingly though, financial  
219 pressures are forcing governments to focus on this issue.

220 The Transformational Government Framework does not seek to specify in detail what benefits and  
221 impacts a Transformational Government program should seek to achieve – that is a matter for each  
222 individual government. However, the TGF does set out a best practice approach to benefits  
223 realisation.

<sup>7</sup> IT Outlook 2006, OECD

## 224 Part II: The Transformational Government Framework

225 In the increasingly common situation of governments being expected to deliver better and more  
226 services for less cost whilst maintaining high-level oversight and governance, the Transformational  
227 Government Framework provides a framework for designing and delivering an effective program of  
228 technology-enabled change at all levels of government.

229 The Transformational Government Framework can be seen schematically below, made up of four  
230 high-level components:

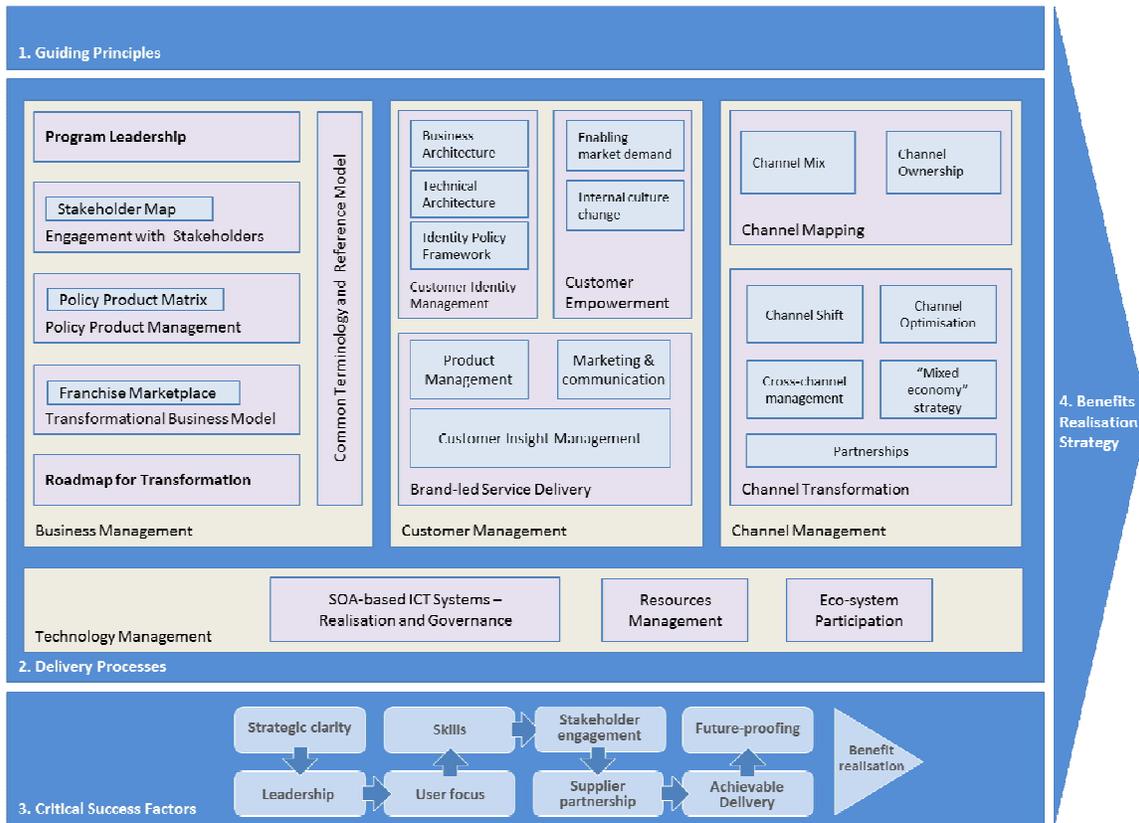

Figure 1: The overall framework

233 Each of these components is described in more detail below. These components, together with the  
234 main concepts that they encompass, are expressed in a more formal structure as a set of “patterns”  
235 in the related “Core Patterns” of the TGF Pattern Language [TGF-PL-Core].

## 236 Component 1: Guiding Principles

237 The TGF Guiding Principles are set out below, and must be used by any Transformational  
238 Government program conforming to the Framework. These principles together represent an  
239 enduring statement of values which the **Leadership** for a Transformational Government program  
240 should adopt and use consistently as a basis to steer business decision-making throughout the  
241 conception, development, implementation and follow-up of that program. These are explicitly  
242 *declaratory* statements of principle (“We believe...”) that reflect the desired commitment of the  
243 program Leadership as well as indicating the expectations from all **Stakeholders**.

### 244 We believe in detailed and segmented understanding of our citizen and 245 business customers

- 246 • These customers should be owned at the whole-of-government level
- 247 • Decisions should be based upon the results of research rather than assumptions being made  
248 about what customers think
- 249 • Real-time, event-level understanding of citizen and business interactions with government  
250 should be developed

### 251 We believe in services built around customer needs, not organisational 252 structure

- 253 • Customers should be provided with a “one-stop service” experience in their dealings with  
254 government, built around their needs (such as accessibility)
- 255 • Government should not be continually restructured in order to achieve this - instead "customer  
256 franchises" should be created that sit within the existing structure of government and act as  
257 change agents
- 258 • Services should be delivered across multiple channels using Service-Oriented Architecture (SOA)  
259 principles to join it all up, reduce infrastructure duplication, and encouraging customers into  
260 lower cost channels where appropriate
- 261 • Organisational and business change must be addressed before money is spent on technology
- 262 • A cross-government strategy should be built for common citizen and business data sets (e.g.  
263 name, address) and common customer applications (e.g. authentication, payments,  
264 notifications)

### 265 We believe that transformation is done with citizens and businesses, not 266 to them

- 267 • All stakeholders should be engaged directly in service design and delivery
- 268 • Customers should be given the technology tools that enable them to create public value  
269 themselves
- 270 • People should be given ownership and control of their personal data - and all non-personally  
271 identifiable data held by government should be freely open for reuse and innovation by third  
272 parties

## 273 We believe in growing the market for transformed services

- 274 • Service transformation plans should be integrated with an effective digital inclusion strategy to  
275 build access to and demand for e-services across society
- 276 • Partnerships should be built with other market players (in the private, voluntary and community  
277 sectors) in recognition of their significant influence on customer attitudes and behaviour and  
278 enable the market and others to work with government to deliver jointly-owned objectives.

## 279 We believe in managing and measuring key critical success factors:

280  
281 **Figure 2:** *The nine Critical Success Factors*

282 These nine factors are covered in Component 2 of the TGF.

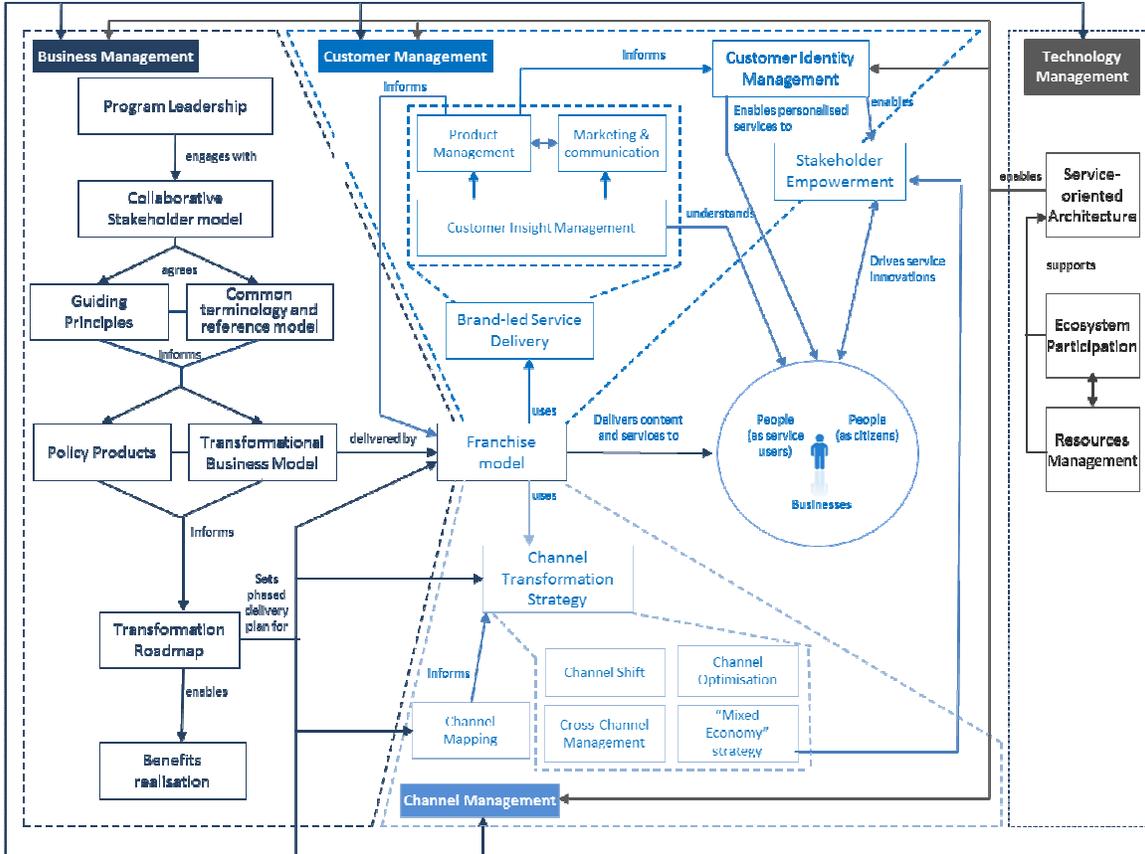

## 283 Component 2: Delivery Processes

284 Delivering the principles outlined in Component 1, in line with the Critical Success Factors detailed in  
285 Component 2, involves re-inventing every stage of the service delivery process. The Transformational  
286 Government Framework identifies four main **delivery processes**, each of which must be managed in  
287 a government-wide and customer-centric way in order to deliver effective transformation:

- 288 • Business Management
- 289 • Customer Management
- 290 • Channel Management
- 291 • Technology Management

292 A high-level map of these delivery processes and how their constituent elements interact is  
293 illustrated in summary below. The following sections then look in more detail at each of the four  
294 delivery processes, setting out the best practices which should be followed in order to ensure  
295 conformance with the Transformational Government Framework.

This is a Non-Standards Track Work Product.  
 The patent provisions of the OASIS IPR Policy do not apply.

296

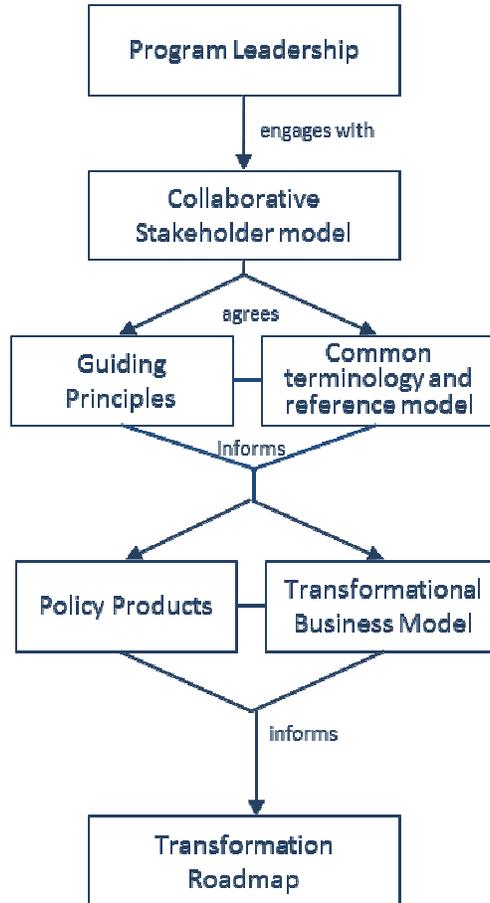

297

Figure 3: Relationships between the four Delivery Processes for Transformational Government

298

## 299 Business Management Framework

300 The Transformational Government Framework identifies six key aspects of business management  
301 which must be tackled at the whole-of-government level:

302  
303 **Figure 4: Overview of the Business Management Framework**

- 304 • **Transformational Government leadership:** the key people and governance structures needed to  
305 develop and implement a Transformational Government program;
- 306 • **A collaborative Stakeholder Governance Model:** the process by which all key stakeholders are  
307 identified, engaged and buy-in to the transformation program;
- 308 • **A common terminology and Reference Model:** ensuring that all stakeholders have a clear,  
309 consistent and common understanding of the key concepts involved in Transformational  
310 Government; how these concepts relate to each other; how they can be formally modelled; and  
311 how such models can be leveraged and integrated into new and existing information  
312 architectures;
- 313 • **A Transformational Business Model:** a new virtual business layer within government, focused  
314 round the needs of citizens and businesses (the “Franchise Marketplace”), which enables the  
315 existing silo-based structure of government to collaborate effectively in understanding and  
316 meeting user needs;

- 317 • The **development and management of Policy Products:** these documents formally define  
318 government-wide goals for achieving government transformation and thus constitute the  
319 documented commitment of any conformant agency to the transformational process;  
320 • A **Roadmap for Transformation:** giving a four to five year view of how the program will be  
321 delivered, with explicit recognition of priorities and trade-offs between different elements of the  
322 program.

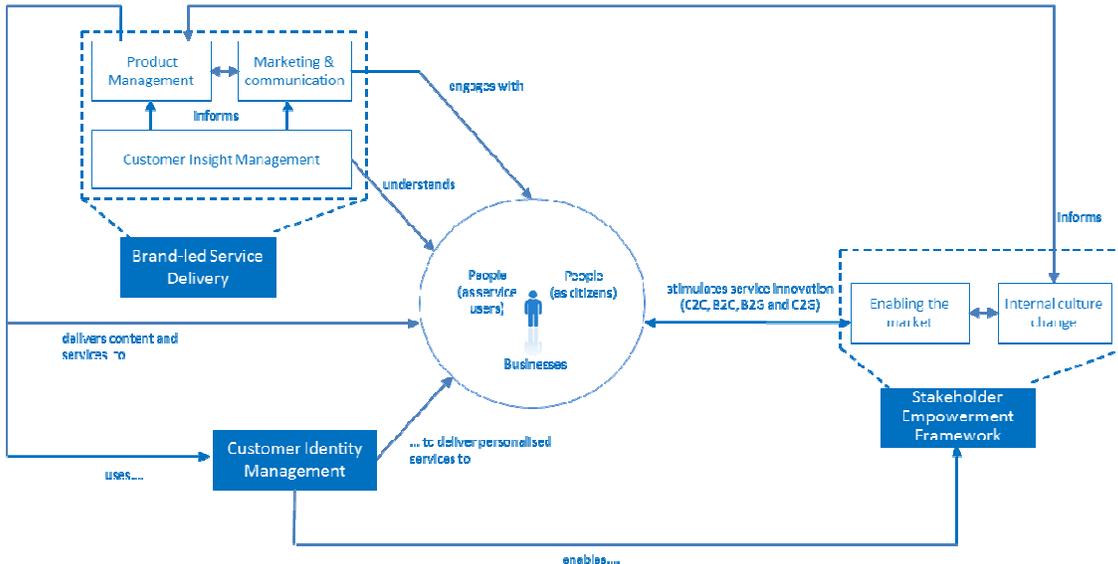

<b>In line with [TGF-PL-Core], any conformant implementation of the TGF Business Management Framework:</b>
<b>MUST</b> have <b>Leadership</b> which involves:
– Clear accountability at both the political and administrative levels
– Deployment of formal program management disciplines
– A clearly identified mix of leadership skills
– Engagement of a broad-based leadership team across the wider government.
<b>MUST</b> demonstrate <b>engagement with stakeholders</b>
<b>MUST</b> agree and use a <b>common terminology</b>
<b>MUST</b> create a <b>Policy Product Map</b> using the matrix as a tool to identify the Policy Products required
<b>MUST</b> have a <b>Transformational Business Model</b>
<b>SHOULD</b> consider the <b>Franchise Marketplace</b> as part of that model
<b>MUST</b> address <b>skills</b> issues
<b>MUST</b> establish a <b>supplier partnership</b>
<b>MUST</b> have a phased <b>Roadmap for Transformation</b>

- 323 Further guidance on how to implement this process is given in Part III (a) of the Primer.  
324

## 325 Customer Management Framework

326 There are three key parts to the TGF Customer Management Framework:

- 327 • **Brand-led Service Delivery:** a user-focused framework for ensuring that:
  - 328 – Detailed *insight* is gathered into citizen and business needs
  - 329 – This insight informs a **brand-led product management process** covering all stages of
  - 330 government service design and delivery
  - 331 – The brand values for Transformational Government then drive all aspects of **marketing and**
  - 332 **communications** for government services;
- 333 • **Identity Management**<sup>8</sup>: the business architecture, technical architecture, and customer-centric
- 334 identity model needed to enable secure and joined-up services which citizens and businesses will
- 335 trust and engage with; and
- 336 • **Stakeholder Empowerment:** the internal cultural changes and external market-enabling actions
- 337 which enable governments to engage with citizens and businesses as active co-creators of public
- 338 services, rather than their passive recipients.

339  
340 **Figure 5: Overview of the Customer Management Framework**

**In line with [TGF-PL-Core], any conformant implementation of the TGF Customer Management Framework:**

**MUST** have a Brand-led **Service Delivery Strategy**, which is agreed and managed at a whole-of-government level and which addresses:

- Customer Insight;
- Product Management;
- Marketing and communication;

**MUST** have a **Customer Identity Management Framework**, which:

- uses a federated business model;

<sup>8</sup> 'Identity Management' is correctly termed 'Identity Information Management' as identity itself is not technically managed but intrinsic to us as humans. It is often shortened to Identity Management, which will be used throughout.

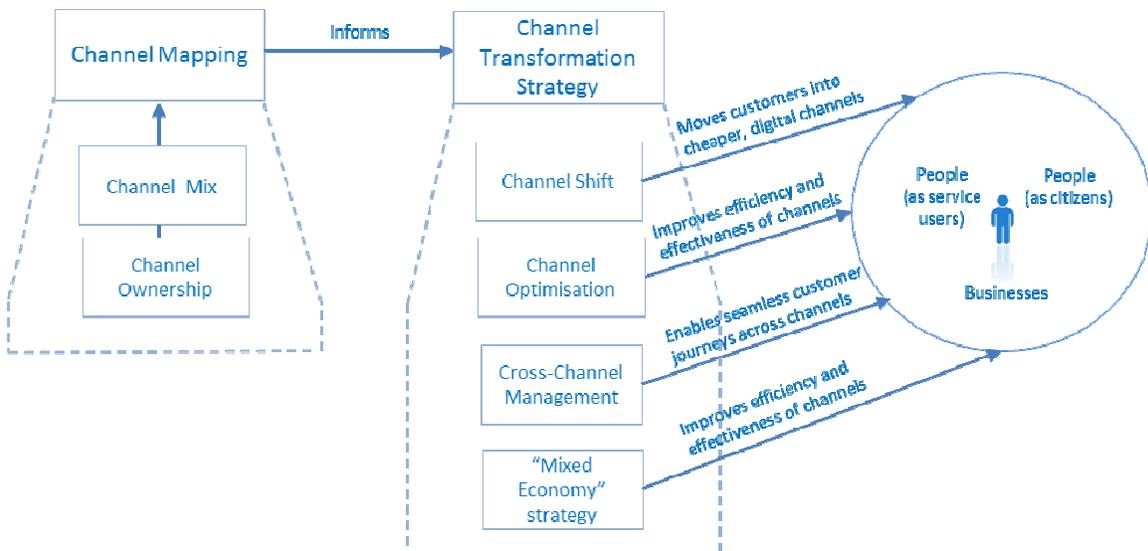

- uses a service-oriented IT architecture;
  - is customer-centric, giving customers control, choice and transparency over personal data;
- MUST** have a **Stakeholder Empowerment Framework**, which encourages and enables service innovation in the Citizen-to-Citizen, Business-to-Citizen, and Citizen-to-Government sectors.

341 Further guidance on how to implement this process is given in Part III (b) of this TGF Primer.

## 342 Channel Management Framework

343 The two key parts of the Channel Management Framework are:

- 344 • **Channel Mapping:** a clear audit of what channels are currently used to deliver government  
345 services. The TGF Channel Mapping approach includes an analysis of these channels across two  
346 key dimensions: which delivery channels are being used ('channel mix') and who owns them  
347 ('channel ownership').
- 348 • **Channel Transformation Strategy:** building a new channel management approach centred  
349 around the needs and behaviour of citizens and businesses. The key concerns of such an  
350 approach include:
  - 351 – Channel Optimization;
  - 352 – Channel Shift;
  - 353 – Cross-Channel Management; and
  - 354 – development of a "Mixed Economy" in service provision through private and voluntary  
355 sector intermediaries.

356  
357

Figure 6: Overview of the Channel Management Framework

<b>In line with [TGF-PL-Core], any conformant implementation of the Channel Management Framework:</b>
<b>MUST</b> have a clear <b>mapping of existing channels</b> , and their cost structures
<b>MUST</b> have a <b>Channel Transformation Strategy</b> which addresses the following elements:
– Shifting service users into lower cost, digital channels;
– Optimising the cost and performance of each channel, including through use of benchmarking;
– Improving cross-channel management, with the aim of providing a seamless user experience across different channels;
– Developing a thriving mixed economy in the delivery of government services by private and voluntary sector intermediaries.

358 Further guidance on how to implement this process is given in Part III (c) of this TGF Primer.

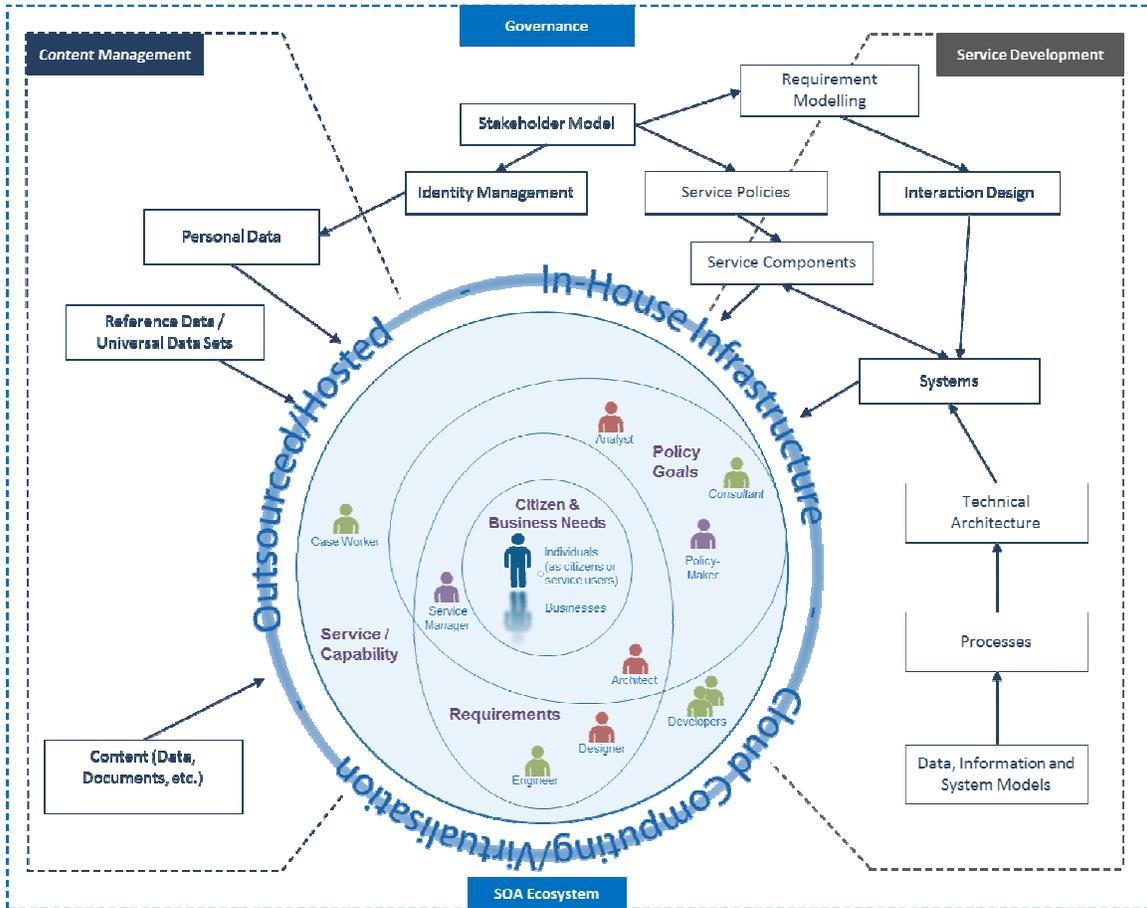

### 359 Technology Management Framework

360 The elements of the TGF Technology Management Framework are as follows:

- 361 • Resources Management: the explicit identification and management of all information and
- 362 technology resources;
- 363 • Ecosystem Participation: a clear model and understanding of the stakeholders, actors and
- 364 systems that comprise the overall service ecosystem and their relationships to each other;
- 365 • Realisation and governance of ICT systems based on SOA principles

366

This is a Non-Standards Track Work Product.  
 The patent provisions of the OASIS IPR Policy do not apply.

367  
 368

Figure 7: Overview of the Technology Management Framework

<b>In line with [TGF-PL-Core], any conformant implementation of the Technology Management Framework:</b>
<b>MUST</b> manage information and ICT system resources as distinct, valued assets including issues related to the Identification, ownership, stewardship and usage policies for each asset type;
<b>MUST</b> explicitly model the stakeholders, actors and systems that comprise the overall service ecosystem and their relationships to each other
<b>SHOULD</b> maintain and update the stakeholder model on a regular basis
<b>MUST</b> use the OASIS 'Reference Model for SOA' as the primary source for core concepts and definitions of the SOA paradigm, including
– A clear understanding of the goals, motivations and requirements that any SOA-based system is intended to address;
– Identifiable boundaries of ownership of all components (and identity of the components themselves) in any SOA ecosystem;
– Discrete service realisation and re-use that provides a capability to perform some work on behalf of another party;
– The specification of any capability that is offered for use by another party with clear service descriptions and contracts
<b>SHOULD</b> consider the OASIS 'SOA Reference Architecture Framework' when designing specific SOA-based systems

369 Further guidance on how to implement this process is given in Part III (d) of this TGF Primer.

## 370 Component 3: Critical Success Factors

371 Conformant Transformational Government programs manage and measure these Critical Success  
372 Factors throughout the life of the program.

### 373 Strategic Clarity

- 374 • **All-of-Government view:** Transformational government cannot be pursued on a project-by-  
375 project or agency-specific basis but requires a whole-of-government view, connecting up  
376 relevant activities in different agencies at different levels of government within and between  
377 countries.
- 378 • **Clear vision:** all program stakeholders have a common, agreed and comprehensive view of what  
379 the program is seeking to achieve. In particular, we do not spend money on technology before  
380 identifying the key organizational and business changes needed to deliver our vision.
- 381 • **Strong business case:** we know what outcomes we want to achieve, have base-lined where we  
382 are now, and know how we will measure success.
- 383 • **Focus on results:** although we have a vision of where we want to go, and a set of principles by  
384 which we will move forwards, we do not over-plan. Instead, our strategy focuses on taking  
385 concrete, practical steps in the short to medium term, rather than continually describing the  
386 long-term vision.

## 387 Leadership

- 388 • **Sustained support:** political leaders and senior management are committed to the program for  
389 the long term. This is particularly relevant given the realities of changing political leadership and  
390 underlines the need for continuity across those changes.
- 391 • **Leadership skills:** our program leaders have the skills needed to drive ICT-enabled business  
392 transformation, and have access to external support
- 393 • **Collaborative governance:** leaders from all parts of our and other organizations involved in the  
394 program are motivated for it to succeed, and are engaged in clear and collaborative governance  
395 mechanisms to manage any risks and issues.

## 396 User focus

- 397 • **A holistic view of the customer:** we understand who the customers for our services are - not just  
398 for individual services - but across the Government as a whole. We know our customers, both  
399 internal and external, are different - and understand their needs on a segmented basis.
- 400 • **Customer-centric delivery:** customers can access all our services through a "one-stop service".  
401 This is available over multiple channels and that respond to different needs, but we use web-  
402 based services to join it all up and reduce infrastructure duplication, and we encourage  
403 customers into lower cost channels where possible and compatible with individual needs (such  
404 as accessibility).
- 405 • **Stakeholder empowerment:** we engage customers directly in service design and delivery, and  
406 provide them with technology tools that enable them to create public value themselves.

## 407 Stakeholder engagement

- 408 • **Stakeholder communication:** all our stakeholders - users, suppliers, delivery partners elsewhere  
409 in the public, private and voluntary sector, politicians, the media, etc. - have a clear  
410 understanding of our program and how they can engage with it.
- 411 • **Cross-sectoral partnership:** other market players (in the private, voluntary and community  
412 sectors) often have much greater influence on customer attitudes and behaviour than  
413 government - so our strategy aims to build partnerships which enable the market to deliver our  
414 objectives.

## 415 Skills

- 416 • **Skills mapping:** we know that the mix of business change, product and marketing management,  
417 program management, and technology skills needed to deliver transformational change does  
418 not already exist in our organisation. We have mapped out the skills we need, and have a clear  
419 strategy for acquiring and maintaining them.
- 420 • **Skills integration:** we have effective mechanisms in place to maximize value from the skills  
421 available in all parts of our delivery team, bringing together internal and external skills into an  
422 integrated team.

## 423 Supplier Partnership

- 424 • **Smart supplier selection:** we select suppliers based on long-term value for money rather than  
425 price, and in particular based on our degree of confidence that the chosen suppliers will secure  
426 delivery of the expected business benefits.
- 427 • **Supplier integration:** we will manage the relationship with strategic suppliers at top  
428 management level, and ensure effective client/supplier integration into an effective program  
429 delivery team with shared management information systems.

## 430 Future-proofing

- 431 • **Interoperability:** Wherever possible we will use interoperable, open standards which are well  
432 supported in the market-place.
- 433 • **Web-centric delivery:** we will use SOA principles in order to support all of our customer  
434 interactions, from face-to-face interactions by frontline staff to online self-service interactions
- 435 • **Agility:** we will deploy technology using common building blocks which can be re-used to enable  
436 flexible and adaptive use of technology to react quickly to changing customer needs and  
437 demands.
- 438 • **Shared services:** key building blocks will be managed as government-wide resources - in  
439 particular common customer data sets (e.g. name, address); applications and application  
440 interfaces (e.g. authentication, payments, notifications); and core ICT infrastructure.

## 441 Achievable Delivery

- 442 • **Phased implementation:** we will avoid a "big bang" approach to implementation, reliant on  
443 significant levels of simultaneous technological and organizational change. Instead, we will  
444 develop a phased delivery roadmap which:
  - 445 – works with citizens and businesses to identify a set of services which will bring quick user  
446 value, in order to start building a user base
  - 447 – prioritise those services which can be delivered quickly, at low cost, and low risk using  
448 standard (rather than bespoke) solutions
  - 449 – works first with early adopters within the Government organisation to create exemplars and  
450 internal champions for change
  - 451 – learns from experience, and then drives forward longer term transformations.
- 452 • **Continuous improvement:** we expect not to get everything right first time, but have systems  
453 which enable us to understand the current position, plan, move quickly, and learn from  
454 experience
- 455 • **Risk management:** we need clarity and insight into the consequences of transformation and  
456 mechanisms to assess risk and handle monitoring, recovery and roll-back

## 457 Benefits Realization

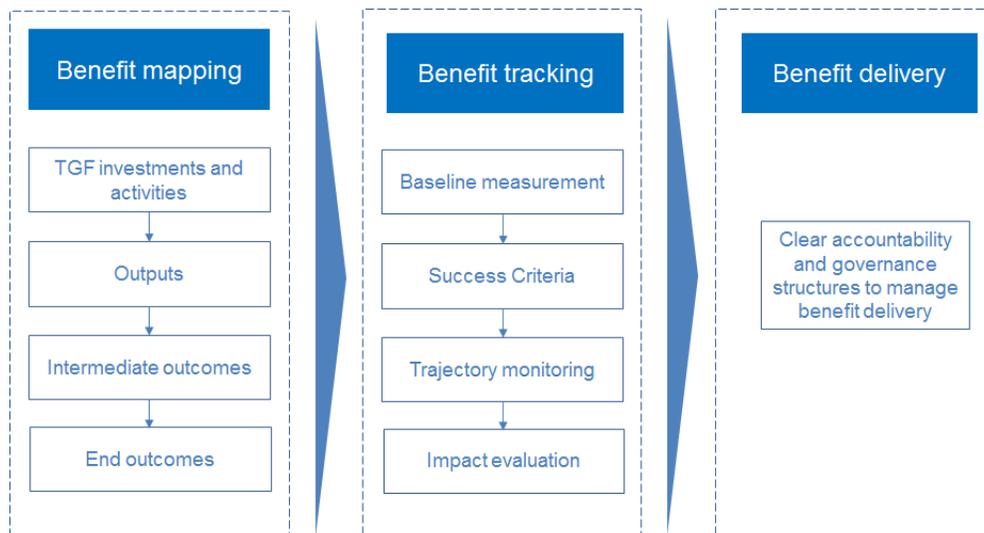

- 458 • **Benefits realisation strategy:** we have a clear strategy to ensure that all the intended benefits  
459 from our Transformation Program are delivered in practice, built around the three pillars of  
460 benefit mapping, benefit tracking and benefit delivery.

## 461 Component 4: Benefits Realisation Strategy

462 The three parts of the TGF Benefits Realisation Strategy are:

- 463 • **Benefit Mapping:** which sets out all the intended outcomes from the transformation program  
464 and gives visibility of how the outputs from specific activities and investments in the program  
465 flow through to deliver those outcomes;
- 466 • **Benefit Tracking:** which takes this a step further by baselining current performance against the  
467 target output and outcomes, defining “smart” success criteria for future performance, and  
468 tracking progress against planned delivery trajectories aimed at achieving these success criteria;  
469 and
- 470 • **Benefit Delivery:** which ensures that governance arrangements are in place to ensure continued  
471 benefits after the initial transformation program is implemented.

472 The relationship between these parts and conformance criteria for this element of the TGF are  
473 shown below.

474

475 **Figure 8: Overview of the Benefits Realisation Strategy**

<b>In line with [TGF-PL-Core], any conformant implementation of the Benefit Realisation Strategy:</b>
<b>MUST clearly identify and quantify the impacts and outcomes that implementation of the TGF aims to achieve</b>
<b>SHOULD ensure clear line-of-sight between every investment and activity in the programme, the immediate outputs these produce, and the final targeted outcomes</b>
<b>MUST establish clear and quantified baselines for the current performance of target outputs and outcomes</b>
<b>MUST set measurable success criteria</b>
<b>SHOULD track progress against planned delivery trajectories for each of the targeted outputs and outcomes</b>
<b>MUST establish clear accountability and governance structures to manage benefit delivery</b>

476

## 477 Terminology and Reference Model

478 The Business Management Framework of the TGF includes formal terminology and a reference  
479 model in order to ensure that all stakeholders have a clear, consistent and shared understanding of  
480 the key concepts involved in Transformational Government; how these concepts relate to each  
481 other; how they can be formally modelled; and how such models can be leveraged and integrated  
482 into new and existing information architectures.

483 This enables any conformant agency to use a common terminology without ambiguity and be sure  
484 that these terms are used consistently throughout all work.

485 Some key concepts are already introduced below. Further guidance on how the terminology is  
486 composed and how a reference model may be used is given in Part III (a) of this Primer.

## 487 Core Terminology

### 488 **Accessibility**

489 *A policy prescription that aims at ensuring that people with disabilities and the*  
490 *elderly can use public services with the same service levels as all other individuals.*

### 491 **Channel**

492 *A particular means and/or path of delivery of a service to a customer*

### 493 **Customer**

494 *Any natural or legal person (a citizen or a business) who uses a public service.*  
495 *Standard SOA terminology refers to “consumer” but “customer” is to be preferred in*  
496 *order to highlight a more active role than is implied by (the more passive term)*  
497 *consumer.*

### 498 **Customer Franchise**

499 *A collaborative organisation created by the government with the purpose of:*  
500 *understanding the needs of a specific customer segment for government services*  
501 *(such as, for example, parents, motorists, disabled people, land and property);*  
502 *championing the needs of that segment within government; aggregating content*  
503 *and transactions for that segment from across government and beyond; and*  
504 *delivering that content and services as part of the wider Franchise Marketplace.*

### 505 **Delegate**

506 *Some person or agent acting with authority on behalf of another person.*

### 507 **Delivery Roadmap**

508 *A detailed multi-year plan for the delivery of an overall cross-government vision for*  
509 *service transformation*

### 510 **Ecosystem**

511 *A set of ICT systems and stakeholders together with the environment and context*  
512 *within which they all operate*

### 513 **Franchise Marketplace**

514 *The virtual business infrastructure within which Customer Franchises collaborate*  
515 *with each other and other stakeholders to deliver user-centric, trusted and*

516 *interoperable content and transactions to citizens and businesses. The Franchise*  
517 *Marketplace is the business model recommended by the TGF for best delivering the*  
518 *TGF Guiding Principle of “Build services around customer needs, not organisational*  
519 *structure”.*

520 **Goal**

521 *A broadly stated, unmeasured but desired outcome. Not to be confused with an*  
522 **Objective**

523 **Inclusion**

524 *A policy prescription that aims at allowing everyone to take full advantage of the*  
525 *opportunities offered by new technologies to overcome social and economic*  
526 *disadvantages and exclusion.*

527 **Interoperability**

528 *The ability of disparate and diverse organisations to interact towards mutually*  
529 *beneficial and agreed common goals, involving the sharing of information and*  
530 *knowledge between the organisations, through the business processes they support,*  
531 *by means of the exchange of data between their respective ICT systems.*

532 **Leadership**

533 *Key people and governance structures needed to develop and implement a*  
534 *Transformational Government program*

535 **Need**

536 *A general statement expressed by a stakeholder of something that is required. Not*  
537 *to be confused with a **Requirement***

538 **Objective**

539 *A specific, measurable and achievable outcome that a participant seeks to achieve*

540 **One-stop Service**

541 *A service designed around the needs of citizens and businesses. Such a service brings*  
542 *content and transactions from a wide number of different government agencies,*  
543 *and from different layers of government, enabling them to be integrated as a “one*  
544 *stop” point of service delivery, according to common service standards and with*  
545 *common marketing and communication.*

546 **Policy Product**

547 *A document that has been formally adopted on a government-wide basis and aimed*  
548 *at helping achieve one or other goal of transformational government*

549 **Requirement**

550 *A formal statement of a desired result that, if achieved, will satisfy a need*

551 **Security**

552 *The set of mechanisms for ensuring and enhancing trust and confidence in a system.*

553 **Service-Oriented, Service-Oriented**

554 *A paradigm for organizing and utilizing distributed capabilities that may be under*  
555 *the control of different ownership domains.*

556 **Stakeholder**

557 *Any claimant inside or outside an organisation who have a vested interest in any*  
558 *problem and/or its solution*

559 **Stakeholder Governance Model**

560 *Model and process in which key stakeholders are identified, engaged and buy-in to*  
561 *the transformation program*

562 **System**

563 *A collection of components organized to accomplish a specific function or set of*  
564 *functions*

565 **Transformational Government**

566 *A managed, customer-centred, process of ICT-enabled change in the public sector*

## 567 Part III: Guidance Notes

568 This part of the TGF Primer sets out some initial guidance to help TGF users understand and  
569 implement the TGF, focusing in particular on:

- 570 • The TGF Business Management Framework
- 571 • The TGF Customer Management Framework
- 572 • The TGF Channel Management Framework
- 573 • The TGF Technology Management Framework
- 574 • TGF Terminology.

575 We envisage issuing further guidance over time, but this initial set of guidance notes is intended to  
576 give a deeper view of the context for these major elements of the TGF, and to highlight best practice  
577 approaches to its implementation.

## 578 Part III (a): Guidance on the TGF Business Management 579 Framework

### 580 Introduction

581 The TGF Business Management Framework is in four main sections:

- 582 • Context
- 583 • Overview of key components in the TGF Business Management Framework
- 584 • Detailed description of and guidance on the key components

### 585 Context

586 For largely historical reasons, governments are generally organised around individually accountable  
587 vertical silos (for example, tax, health, transport) with clear demarcations between central, regional,  
588 and local government. Even within a particular tier of government, several organisations can have  
589 responsibility for different aspects of the same person, same asset or same process. Yet citizen and  
590 business needs cut across these demarcations. In moving to a customer-centric approach, it is vital to  
591 redress this fragmented approach to business management, and to put in place business  
592 management processes which operate at the whole-of-government level.

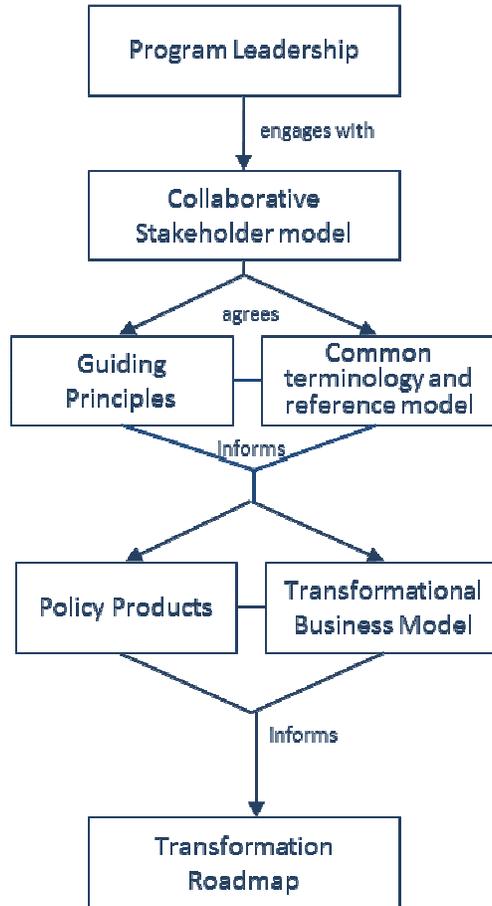

### 593 Overview of key components in the TGF Business Management 594 Framework

595 The Transformational Government Framework identifies six key aspects of business management  
596 which need to be tackled in this way:

- 597 • **Transformational Government leadership:** the key people and governance structures needed to  
598 develop and implement a Transformational Government program
- 599 • A **collaborative Stakeholder Governance Model:** the process by which all key stakeholders are  
600 identified, engaged and buy-in to the transformation program, including to the Guiding  
601 Principles described in Component 1 of the TGF
- 602 • A **common terminology and reference architecture:** ensuring that all stakeholders have a clear,  
603 consistent and common understanding of the key concepts involved in Transformational  
604 Government and how these inter-relate
- 605 • A **Transformational Business Model:** a new virtual business layer within government, focused  
606 round the needs of citizens and businesses, which enables the existing silo-based structure of  
607 government to collaborate effectively in understanding and meeting user needs
- 608 • The **development and management of Policy Products** that constitute the documented  
609 commitment to the transformational process of any conformant agency
- 610 • A **Roadmap for Transformation:** giving a four to five year view of how the program will be  
611 delivered, with explicit recognition of priorities and trade-offs between different elements of the  
612 program.

613 A high level view of the logical relationships between these components is illustrated below.

This is a Non-Standards Track Work Product.  
The patent provisions of the OASIS IPR Policy do not apply.

614  
615 **Figure 9:** Key components of the Business Management Framework

## 616 Transformational Government Leadership

617 Transformation programs require sustained leadership over a period of years.

618 There is no “ideal” leadership structure for a transformation program: the optimal positioning of the  
619 leadership team will depend on the context of each specific government. However, global  
620 experience suggests the following factors are vital to address in whichever way is most appropriate  
621 for the specific context:

- 622 • **A clear focus of accountability:** at both the political and administrative levels there should be an  
623 explicit functional responsibility for the Transformation Program. These functions should be  
624 occupied by individuals with sufficient authority to command the resources and mobilise the  
625 support necessary to fulfil this mission.
- 626 • Deployment of **formal program management disciplines:** to deliver effective-Government-wide  
627 transformation, it is vital to use a formalised program management approach, such as PRINCE 2<sup>9</sup>.

<sup>9</sup> PRINCE2 is a process-based approach for project management, providing an easily tailored and scalable project management methodology for the management of all types of projects. The method is the de-facto standard for project management in the UK and is practiced worldwide. It is in the public domain, offering non-proprietary best practice guidance on project management. PRINCE2 is a registered trademark of the UK government’s Office of Government Commerce.

- 628 • Ensuring the **right skills mix in the leadership team**. Effective leadership of a Transformation  
629 Program requires the senior accountable leaders to have access to a mix of key skills in the  
630 leadership team which they build around them, including: strategy development skills,  
631 stakeholder engagement skills, marketing skills, commercial skills and technology management  
632 skills. Deployment of a formal competency framework such as SFIA<sup>10</sup> can be helpful in identifying  
633 and building the right skill sets.
- 634 • Building a **broad-based leadership team across the wider government**. It is not essential that all  
635 Ministers and senior management are committed to the transformation program from the  
636 outset. Indeed, a key feature of an effective roadmap for transformation is that it nurtures and  
637 grows support for the strategy through the implementation process. However, it is important  
638 that the program is seen not simply as a centralised or top-down initiative. Sharing leadership  
639 roles with senior colleagues across the Government organisation is therefore important. Further  
640 detail on this is set out in the section below on a collaborative stakeholder model.

## 641 Collaborative Stakeholder Governance Model

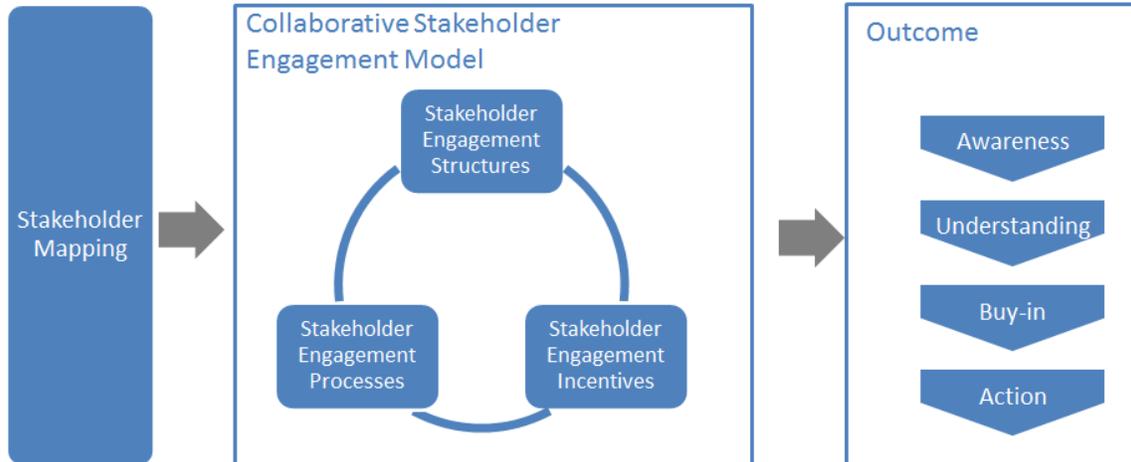

642 Development and delivery of an effective Transformational Government program requires  
643 engagement with a very wide range of stakeholders, not only across the whole of government but  
644 also with the private sector, voluntary and community sectors as well as with business and citizen  
645 users of public services. A significant effort is needed to include all stakeholders in the governance  
646 of the Transformational Government program at an appropriate and effective level.

647 Key elements are set out below that a conformant TGF program will need to address in developing  
648 its Collaborative Stakeholder Governance Model, if it is to engage successfully with stakeholders and  
649 align them effectively behind shared objectives. Each of these elements is then discussed in more  
650 detail.

---

<sup>10</sup> The Skills Framework for the Information Age (SFIA) provides a common reference model for the identification of the skills needed to develop effective Information Systems (IS) making use of ICT, enabling employers of ICT professionals to carry out a range of HR activities against a common framework of reference - including skill audit, planning future skill requirements, development programmes, standardisation of job titles and functions, and resource allocation. The Skills Framework for the Information Age is owned by The SFIA Foundation: [www.SFIA.org.uk](http://www.SFIA.org.uk).

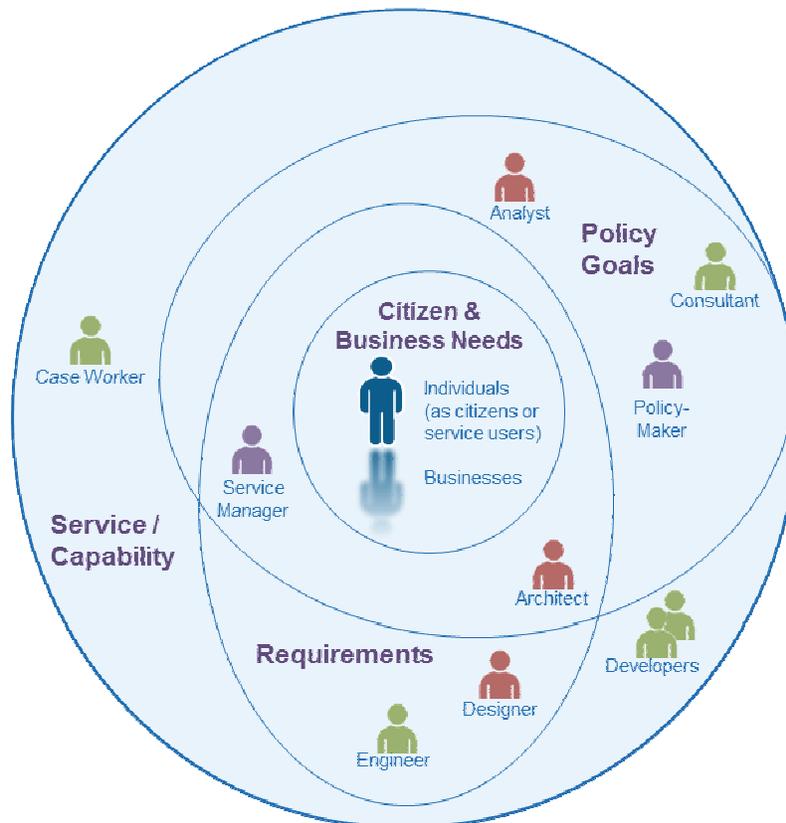

This is a Non-Standards Track Work Product.  
The patent provisions of the OASIS IPR Policy do not apply.

651  
652 **Figure 10:** *Overview of Collaborative Stakeholder Governance*

### 653 *Stakeholder Mapping*

654 It is vital to describe and map the complete landscape of relevant stakeholders. The  
655 Transformational Government Framework puts the individual – whether acting on their own behalf  
656 as a citizen or on behalf of another citizen or of a business– at the centre:

657  
658 **Figure 11:** *Landscape of some key stakeholders*

659 This view deliberately and completely avoids the rather generic concept of ‘User’ that is dominant in  
660 traditional IT stakeholder engagement models, preferring rather to identify the different interests

661 and concerns that are at stake (the mauve labels) and the key groups of stakeholders (the different  
662 people icons) in the development of any service.

663 The figure is by no means complete nor the only 'valid' view. It seeks instead to illustrate that the  
664 process of transformation requires reappraisal of the current set-up and assessment of what needs  
665 to change.

666 By clearly separating out key stakeholder groups and starting to understand and articulate their  
667 specific concerns *as stakeholders* (any individual's *role* may vary according to context: in one  
668 situation, a person is a parent; in another, a policy-maker; or another, a service provider), we can  
669 start to understand how stakeholders relate (in different roles): to each other; to various  
670 administrations and services involved; to policy drivers and constraints; and how these all come  
671 together in a coherent ecosystem supported by a Transformational Government Framework. In this  
672 view,

- 673 • A **service** (or ICT capability made available as a service) is understood as responding to a set of  
674 requirements and policy goals (some of which overlap) – stakeholders concerned at this level  
675 include, for example, case workers in a public administration or developers who have worked  
676 with them in delivering a specific service;
- 677 • **Requirements** encapsulate and formalise vaguely stated goals and needs of citizens and  
678 businesses and take on board the policy goals of the political sponsor or champion –  
679 stakeholders at this level include, for example, managers of public service who can articulate the  
680 needs of their respective services, the information and systems architects who capture those  
681 needs as formal requirements that engineers can work with to develop services;
- 682 • **Policy Goals** capture the high-level concerns and priorities of the political authorities and  
683 continually assess how these goals reflect key citizen and business concerns – stakeholders  
684 include policy makers and senior management as well as consultants and analysts involved in  
685 helping identify technology and administrative trends that can be used to leverage those goals;  
686 and finally;
- 687 • **Citizen and Business Needs** that, ultimately, can only be fully understood by the people  
688 concerned themselves – nonetheless stakeholders at this level can also include citizen or  
689 business associations, consumer and other interest groups who engage with policy makers to  
690 advance the interests of certain groups with distinct needs and are able to articulate those needs  
691 in ways that can be used by analysts and consultants.

692 The various ellipses in the diagram above are deliberately not concentric circles. This is to underline  
693 that the process of establishing a service or capability is not a linear one going from needs, goals and  
694 requirements. In reality stages are often inter-related.

695 The mapping of stakeholders and their principal concerns at a generic level is used as a key input to  
696 the TGF reference model outlined in the next section and that needs to be validated within any TGF  
697 program. It is valuable as a tool for encouraging collaborative governance as it renders explicit many  
698 of the relationships and concerns that are often left implicit but nonetheless impact on an  
699 organisation's ability to reflect stakeholders' concerns.

## 700 *The Stakeholder Engagement Model*

701 However, it is not enough simply to map and understand stakeholder relationships and concerns. An  
702 effective TGF program will also address the three other dimensions of the model illustrated above:

- 703 • **Stakeholder Engagement Structures:** the organisational arrangements put in place to lead the  
704 transformation programme, e.g.:  
705 central unit(s)  
706 governance boards  
707 – industry partnership board
- 708 • **Stakeholder Engagement Processes:** the processes and work flows through which the TGF  
709 Leadership and the different TGF Stakeholders interact, e.g.:  
710 reporting and accountability processes  
711 risk management processes  
712 issue escalation processes  
713 consultation processes  
714 – collaborative product development processes.
- 715 • **Stakeholder Incentives:** the set of levers available to drive change through these governance  
716 structures and processes. These will vary by government, but typical levers being deployed  
717 include:  
718 central mandates  
719 political leadership  
720 administrative championship  
721 personal performance incentives for government officials  
722 – alignment between public policy objectives and the commercial objectives of private sector  
723 partners.

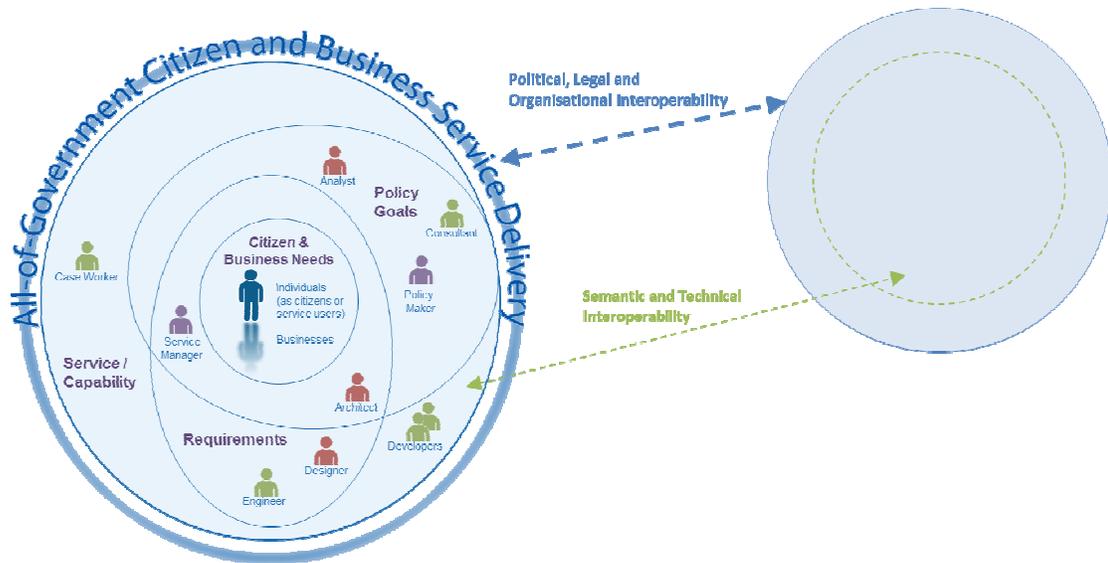

724 There is no one right model for doing this successfully, but any conformant TGF program needs to  
725 make sure that it has used the framework above to define its own Collaborative Stakeholder  
726 Engagement Model which explicitly articulates all of these elements: a comprehensive stakeholder  
727 map, coupled with the structures, processes and incentives needed to deliver full understanding and  
728 buy-in to the program, plus effective stakeholder action in support of it.

### 729 *Collaboration between TGF Programs*

730 The model clearly focuses attention *within* any specific TGF program. However (and increasingly)  
731 collaboration is required also *between* governments and, by implication, between TGF programs.

732 In the figure below, we see that collaboration between TGF programs is favoured at the political,  
733 legal and organisational levels and only later, if and when necessary, at the more ‘tightly-coupled’  
734 semantic and technical levels.

This is a Non-Standards Track Work Product.  
The patent provisions of the OASIS IPR Policy do not apply.

735  
736 **Figure 12:** Collaboration between TGF programs through different levels of Interoperability

737 This approach is also consistent with the SOA paradigm for service development – not only are  
738 requirements defined and services offered independently of any underlying technology or  
739 infrastructure but also one TGF program can be seen (and may need to be seen) as a ‘service  
740 provider’ to another TGF program’s ‘service request’. For example, a business wishing to establish  
741 itself in a second country may need to provide authenticated information and credentials managed  
742 by government or business in the first country.

743 A further advantage of this approach is that it becomes easier to identify and manage high level  
744 government requirements for services: whether in the choice of ICT standards that may need to be  
745 used to address a particular technology issue or determining the criteria for awarding public  
746 procurement contracts, this approach allows a ‘loose-coupling’ at the level of clearly defined high-  
747 level policy needs rather than the more tightly-coupled and often brittle approach of specifying  
748 particular technologies, software or systems.

## 749 Common Terminology and Reference Model

750 In any change program of this breadth and complexity, it is vital that all stakeholders have a common  
751 understanding of the key concepts involved and how they interrelate, and have a common language  
752 to describe these in.

753 We therefore recommend that a TGF-conformant transformation program should seek to agree with  
754 stakeholders a common Terminology and Transformation Reference Model.

### 755 *Why have a terminology and reference model?*

756 In everyday life, we use **terms** – ‘citizen’, ‘need’, ‘service’ – as common, often implicitly accepted  
757 labels for **concepts**. The concept is the abstract mental idea (which should be universal and language  
758 independent) to which the term gives a material expression in a specific language. Particularly in an

759 international environment such as global standardization initiatives, the distinction is important as it  
760 is common concepts that we wish to work with, not common terms<sup>11</sup>.

761 This distinction also helps avoid common modelling pitfalls. Terms that may seem similar or the same  
762 across two or more languages may actually refer to different concepts; or a single term in one  
763 language could be understood to refer to more than one concept which another language expresses  
764 with discrete terms: For example, the English *term* ‘service’ can refer to different *concepts* - an  
765 organisational unit (such as ‘Passport Service’) or something that is performed by one for another  
766 (such as ‘a dry cleaning service’), whereas discrete terms are used for the discrete concepts in  
767 German (‘Dienst’ or ‘Dienstleistung’). As the TGF is intended for use anywhere in the world, it is  
768 important to ensure that (ideally) global concepts can be transposed and translated and thus  
769 understood in other languages: we therefore need to associate an explicit definition with each  
770 concept as we do in a dictionary. The TGF uses the structure and methodology of an existing  
771 international standard to create its terminology<sup>12</sup>

772 Concepts do not exist in isolation, however. It is the broader understanding of the relationships  
773 between concepts that give those concepts fuller meaning and allow us to model our world, our  
774 business activities, our stakeholders, etc. in a way that increases the chance that our digital systems  
775 are an accurate reflection of our work. In information science, an ontology is a formal representation  
776 of knowledge as a set of concepts within a domain, and the relationships between those concepts. It  
777 can be used to describe the domain (the coverage should be sufficiently comprehensive to include all  
778 concepts relevant to the domain) and to reason about the domain.

779 The TGF does not include a formal ontology but is sufficiently clear in its concepts, definitions and  
780 relationships between concepts that the Framework will use consistently as an internally coherent  
781 set. It does include however a “reference model” that is clear enough that subsequent ontology  
782 development is possible if so desired.

783 The TGF Primer already includes formal definitions of key concepts used throughout the Framework  
784 and a complete terminology and reference model – that formalizes the concepts and the  
785 relationships between them – is prepared as a separate deliverable.

## 786 Transformational Business Model

### 787 *Weaknesses of current models*

788 A central task of the TGF leadership and collaborative stakeholder model is to develop a new and  
789 effective business model which enables the machinery of government to deliver customer-centric  
790 “one stop services” in practice.

791 It is failure to address this requirement for a new business model which, arguably, has been the  
792 greatest weakness of most traditional e-Government programmes. For the most part, the transition  
793 to e-Government has involved overlaying technology onto the existing business model of  
794 government: a business model based around unconnected silos - in which policy-making, budgets,  
795 accountability, decision-making and service delivery are all embedded within a vertically-integrated

---

<sup>11</sup> This is central to all multi-lingual thesauri, for example, where the core item of organisation is the concept, not the term.

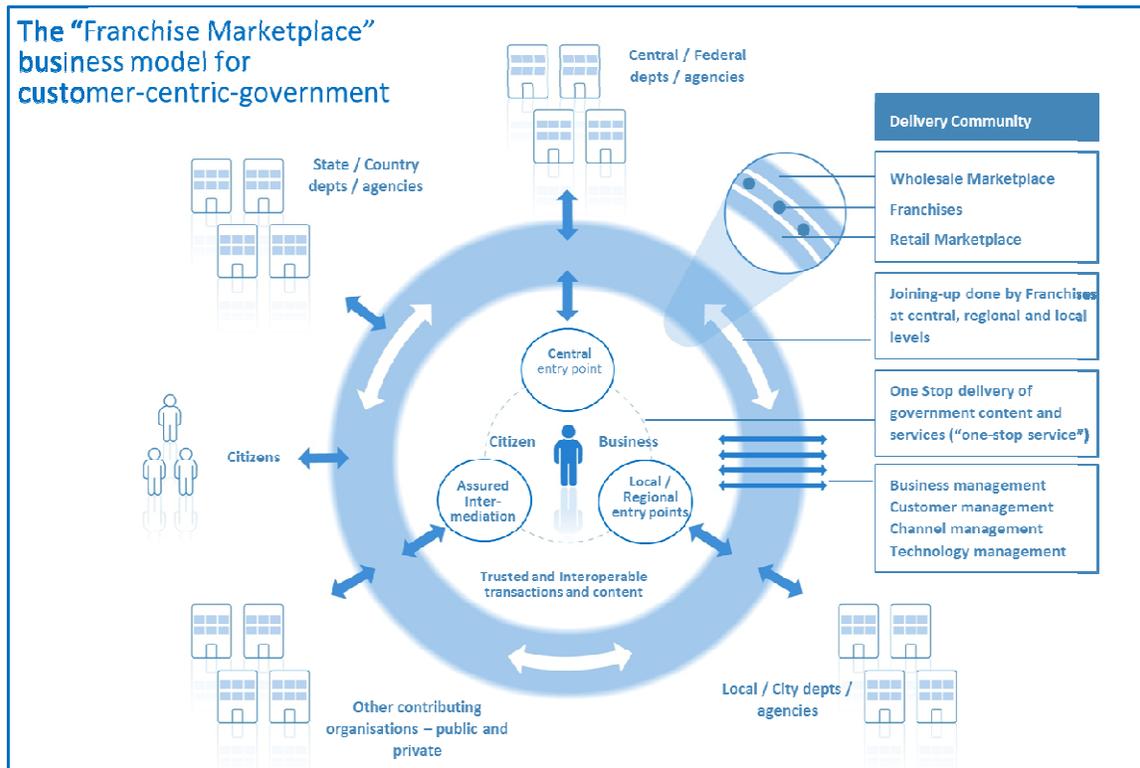

<sup>12</sup> “Terminology work – Vocabulary – Part 1: Theory and application” [ISO 1087-1:2000]

796 delivery chain based around specific government functions. The experience of governments around  
797 the world over the last two decades is that this simply does not work.

798 So what is the new business model which is required to deliver transformational government? Many  
799 attempts have been made by governments to introduce greater cross-government coordination, but  
800 largely these have been "bolted on" to the underlying business model, and hence experience only  
801 limited success.

### 802 *The Franchise Marketplace Model*

803 This Framework recommends implementation of a business model which permits the joining-up of  
804 services from all parts of government and external stakeholders in a way that makes sense to citizens  
805 and businesses, yet without attempting to restructure the participating parts of government.  
806 Conceptually, this leads to a model where the existing structure of government continues to act as a  
807 supplier of services, but intermediated by a "virtual" business infrastructure based around customer  
808 needs. A top-level view of such a virtual, market-based approach to transformational government is  
809 set out in the figure below:

810  
811 **Figure 13:** Overview of the Franchise Marketplace

812 Key features of this business model are:

- 813 • The model puts into place a number of agile cross-government virtual "franchise businesses"  
814 based around customer segments (such as, for example, parents, motorists, disabled people).  
815 These franchises are responsible for gaining full understanding of their customers' needs so that  
816 they can deliver quickly and adapt to changing requirements over time in order to deliver more

- 817 customer centric services - which in turn, is proven to drive higher service take-up and greater  
818 customer satisfaction.
- 819 • Franchises provide a risk-averse operational structure that enables functionally-organised  
820 government agencies at national, regional and local to work together in a customer-focused  
821 "Delivery Community". They do this by :
    - 822 – Enabling government to create a "virtual" delivery structure focused on customer needs
    - 823 – Operating across the existing structure of Government (because they are led by one of the  
824 existing "silos") and resourced by organisations that have close links with the relevant  
825 customer segment including, possibly, some outside of government
    - 826 – Dividing the task into manageable chunks
    - 827 – Removing a single point of failure
    - 828 – Working to a new and precisely-defined operating model so as to ensure consistency
    - 829 – Working across and beyond government to manage the key risks to customer-centric service  
830 delivery
    - 831 – Acting as change agents inside-Government departments / agencies.
  - 832 • The model enables a "mixed economy" of service provision:
    - 833 – firstly, by providing a clear market framework within which private and voluntary sector  
834 service providers can repackage public sector content and services; and
    - 835 – secondly by deploying 'Web 2.0' type approaches across government that promote re-use  
836 and 'mash-ups' of existing content and services, to make this simpler and cheaper at a  
837 technical level.
  - 838 • The whole model is capable of being delivered using Cloud Computing

839 This Franchise model represents an important break-through in the shift from a traditional  
840 e-Government approach towards transformational government. Certainly, the model as a whole or  
841 key elements of it has been adopted successfully in governments as diverse as the UK, Hong Kong,  
842 Croatia, Abu Dhabi and Australia (where it has been adopted by both the South Australia and  
843 Queensland governments).

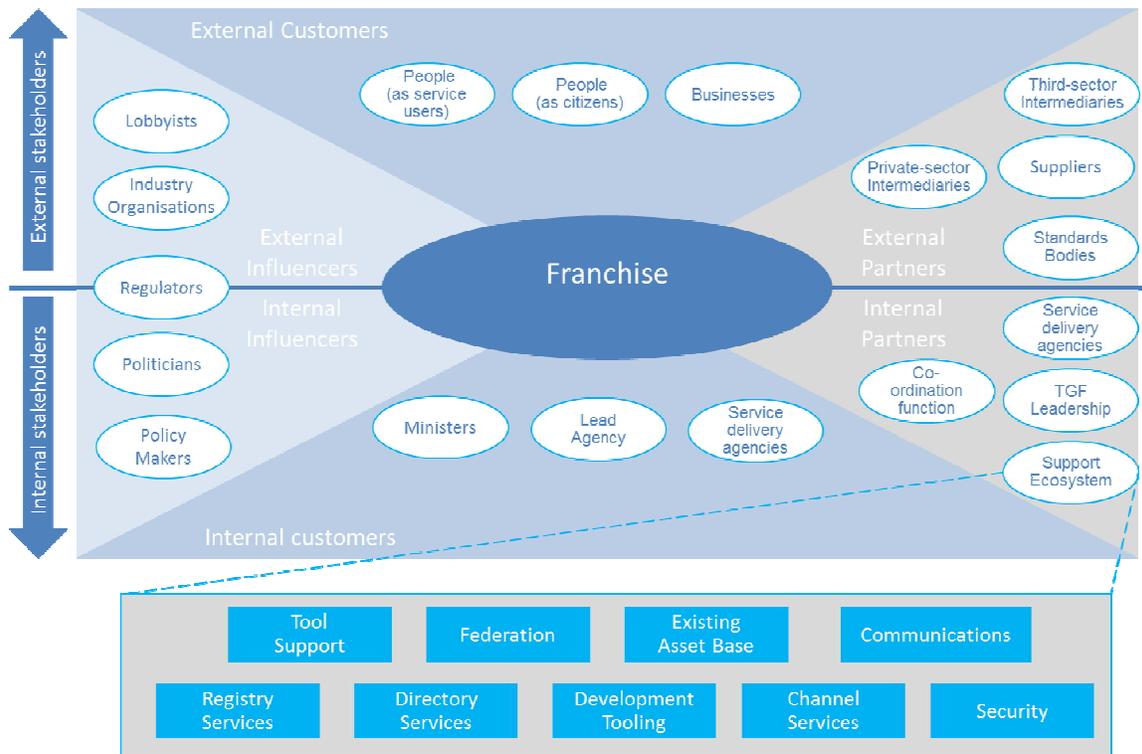

844 It is clearly possible that alternate models may develop in future. But however the Transformational  
845 Government agenda develops, every government will need to find some sort of new business model  
846 along these lines, rather than continue simply to overlay technology onto an old silo-based business  
847 model built for an un-networked world.

#### 848 *Enabling the Franchise Marketplace Model*

849 A number of relationships need to be managed by a franchise to enable it to develop, maintain and  
850 deliver transformational customer-centric one-stop services. These represent different viewpoints  
851 that can be broadly classified as:

- 852 • **Customers:** Those citizens and businesses to whom the franchise delivers content and services,  
853 plus those internal stakeholders to whom the franchise provides a service within the  
854 government.
- 855 • **Partners:** Those who are actors in the normal operation and delivery of the service, both  
856 internally and externally to the government.

- 857 • **Influencers:** those who have a political, business or altruistic interest in the service and the part  
858 that it plays in broader government, business and social scenarios.  
859 • **Internal Customers:** Those who work with the franchise to develop and maintain the service.

860

861 **Figure 14:** Relationships in the Franchise Marketplace

### 862 *The Franchise*

863 The franchise is based around a customer segment. It may contain bodies drawn from central,  
864 regional, and state government and others that contribute to serving that segment.

865 It MUST have a lead organisation that ensures its interests are represented to other franchises and  
866 bodies. It MUST also have sponsoring organisations that with a responsibility for the full range of  
867 service perspectives across the segment.

868 The franchise is responsible for ensuring that all relationships with external bodies are managed and  
869 for the provision of supporting assets necessary to allow organisations within the franchise and  
870 working with it to discharge their responsibilities in an open, consultative and transparent manner.

871 Despite the importance of the franchise concept, it is not intended to add unnecessary bureaucracy  
872 – rather, it is intended to provide a lightweight framework within which participants can work  
873 naturally and cooperatively.

### 874 *Customers*

875 Customers are the most important actors in operational services as the services MUST address their  
876 needs and those of the people that they represent.

877 Thus, as well as being users, it is essential that they are consulted during the proposal stage for all  
878 services. Once operational, this group SHOULD to be involved in customer satisfaction exercises and  
879 the development of any service enhancements to ensure that their needs continue to be met.

880 It is vital that Franchises identify their internal government customers and apply similar customer  
881 research and customer satisfaction measurement to these internal customer relationships as well as  
882 to external ones.

### 883 *Partners*

884 Many partners will be involved in helping the Franchise effectively to deliver the requirements of its  
885 customer segment. The partnership may involve:

- 886 • working with the franchise to develop and maintain the service
- 887 • providing the supporting assets which give a technical underpinning for this and other services.

888 The supporting assets provide the technical underpinning for project delivery. Where they are  
889 publically owned, it is intended that they will provide light-touch governance and facilities (primarily  
890 technical) to support franchises and inter-working between them and with standards bodies.

891 It is essential that they ensure the provision and availability of assets that are universal (i.e.  
892 fundamental items that are required by all public sector organisations) or common (i.e. assets used  
893 across multiple franchises).

894 Tooling SHOULD to be provided with the aim of supporting all stakeholders and facilitating their  
895 collaboration.

### 896 *Influencers*

897 The influencers are those who identify, and possibly mandate, the need for a service. Accordingly, it  
898 is vital that they are able to steer developments within and across franchises. They also have a  
899 responsibility to ensure that all stakeholders are aligned and are organisationally capable of  
900 discharging their responsibilities.

## 901 *Policy Product Management*

902 We define a "Policy Product" as: any document which has been formally adopted on a government-  
903 wide basis in order to help achieve the goals of transformational government. These documents vary  
904 in nature (from statutory documents with legal force, through mandated policies, to informal  
905 guidance and best practice) and in length (some may be very lengthy documents; others just a few  
906 paragraphs of text). Policy Products are important drivers of change within government: first  
907 because the process of producing them, if managed effectively, can help ensure strategic clarity and  
908 stakeholder buy-in; and second because they then become vital communication and management  
909 tools.

910 Over recent years, several governments have published a wide range of Policy Products as part of  
911 their work on Interoperability Frameworks and Enterprise Architectures, and other governments are  
912 therefore able to draw on these as reference models when developing their own Policy Products.  
913 However, we believe that the set of Policy Products required to ensure that a holistic, government -  
914 wide vision for transformation can be delivered is much broader than is currently being addressed in  
915 most Interoperability Frameworks and Enterprise Architectures.

916 A TGF-conformant transformation program will use the matrix shown below to create a map of the  
 917 Policy Products that are needed to deliver the program effectively. This matrix maps the four  
 918 delivery processes described in Component 2 of the TGF (Business Management, Customer  
 919 Management, Channel Management and service-oriented Technology Management) against the five  
 920 interoperability domains identified in what is currently the broadest of Interoperability Frameworks -  
 921 the European Interoperability Framework (EIF): technical, semantic, organisational, legal and policy  
 922 interoperability. While the EIF framework is conceptually complete, by mapping it against these core  
 923 delivery processes, a much clearer sense can be gained of the actions which are needed.

The TGF Policy Product Map	Political Interoperability	Legal Interoperability	Organisational Interoperability	Semantic Interoperability	Technical Interoperability
Business Management	Strategic Business Case for overall Programme	Legal vires for inter-agency collaboration	Benefits Realisation Plan	Business Process Model	Technology roadmap
Customer Management	Identity Management Strategy	Privacy, data protection and data security legislation	Federated trust model for cross-agency identity management	Common data standards	Single sign-on architecture
Channel Management	Intermediaries Policy	Pro-competitive regulatory framework for the telecoms sector	Channel Management guidelines	Web accessibility guidelines	Presentation architecture
Technology Management	Information Security policy	Procurement legislation	Service level agreements	Physical data model	Interoperability Framework

924 **Figure 15:** A Policy Product Map completed with examples of individual policy products. Each cell in the  
 925 matrix may contain one or more policy products depending on the outcome of relevant analysis

926 A full analysis of the Policy Products which we recommend are typically needed to deliver an  
 927 effective and holistic transformation program will be included in a separate Committee Note “Tools  
 928 and Models for the Business Management Framework”. Although the detailed Policy Products in that  
 929 note are advisory and not all of them may be needed, any conformant transformation program  
 930 MUST use the overall framework and matrix of the Policy Product Map in order to conduct at  
 931 minimum a gap analysis aimed at identifying the key Policy Products needed for that government,  
 932 taking the Committee Note into account as guidance.

### 933 Roadmap for Transformation

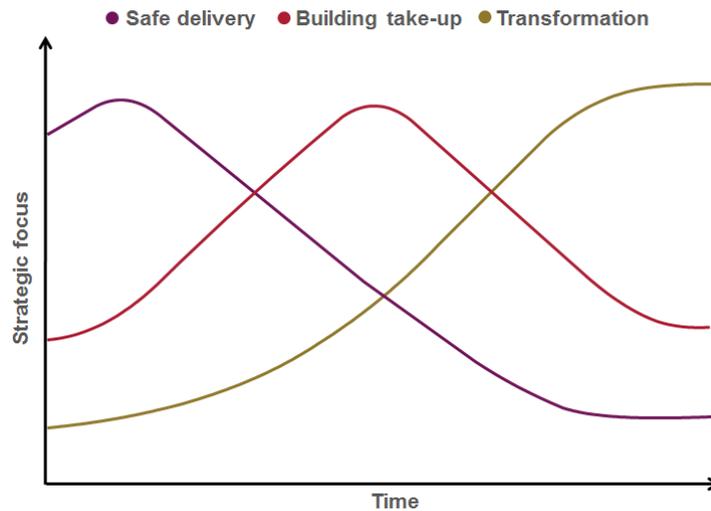

934 Finally, it is essential that the vision, strategy, business model and policies for transformational  
 935 government are translated into an effective Roadmap for Transformation.

936 Since everything can clearly not be done at once, it is vital to map out which elements of the  
 937 transformation programme need to be started immediately, which can be done later, and in what  
 938 order. There is no one-size-fits all strategy which governments can use, since strategy needs to be  
 939 tailored to the unique circumstances of each government's situation.

940 However, all governments face the same strategic trade-offs: needing to ensure clear line-of-sight  
 941 between all aspects of programme activity and the end outcomes which the Government is seeking  
 942 to achieve, and to balance quick wins with the key steps needed to drive longer term transformation.

943 In the early days of the Transformational Government program, we recommend that the major  
944 strategic focus should be on **safe delivery** - that is, prioritising high benefit actions which help to  
945 accelerate belief and confidence across the Government and the wider stakeholder community that  
946 ICT-enabled change is possible and beneficial - but which can be delivered with very low levels of  
947 risk. As the programme develops, and an increasing number of services become available, the  
948 strategic focus can move towards **building take-up**: that is, building demand for online services and  
949 creating a critical mass of users. Once that critical mass starts to appear, the strategic focus can start  
950 to shift towards fuller **transformation**: in other words, to start driving out some of the more  
951 significant transformational benefits that high levels of service take-up enables, for example in terms  
952 of reducing the cost of government service delivery.

953 As the diagram below makes clear, these strategic foci are not mutually exclusive, but overlap.  
954 Crucially, in the Safe Delivery phase there will also be some vital steps needed in order to pave the  
955 way for longer term transformation, particularly in respect of establishing the business case for  
956 transformation, and embedding the strategy in effective governance processes. But the diagram  
957 shows how the strategic weight between each consideration should shift over time.

958 Figure 16: *Roadmap priorities over time*

959 Guided by the strategic trade-off framework described above, experience shows that a phased  
960 approach is the most successful. Typically, an effective Delivery Roadmap will cover five main phases.

### 961 *Plan*

962 The preparation and planning needed to develop a tailored Delivery Roadmap for the Government,  
963 to ensure that the business case for transformation is fully articulated, and that all key stakeholders  
964 are on-board. Key outputs from this phase should include:

- 965 • Transformation vision: a high level document setting out the agreed future model for  
966 transformation of our client organisation and its re-engineered business processes
- 967 • Strategic business case: the key costs and benefits associated with the transformation  
968 programme
- 969 • Delivery roadmap: a multi-year transformation plan, covering, among other things:  
970 – A change management plan (including communication and training plans)

- 971 – Central capability building and governance processes
- 972 – A sourcing strategy
- 973 – A strategy for moving towards a service oriented ICT architecture
- 974 – A risk management strategy
- 975 – A high level benefits realisation plan, setting out the actions needed to ensure full
- 976 downstream delivery of the intended benefits from the transformation programme.

### 977 *Initiate*

- 978 In this first phase of delivery, the focus is on building the maximum of momentum behind the  
979 Roadmap for the minimum of delivery risk. This means focusing in particular on three things:
- 980 • some early quick wins to demonstrate progress and early benefits, for a minimum of delivery risk
  - 981 and using little or no technology expenditure
  - 982 • embedding the Roadmap in governance structures and processes which will be needed to inform
  - 983 all future investments, notably the frameworks of enterprise architecture, customer service
  - 984 standards and issue/risk management that will be required
  - 985 • selecting effective delivery partners.

### 986 *Deliver*

- 987 In this phase, some of the more significant investments start coming on stream - for example, the  
988 first version of the major "one-stop" customer-facing delivery platforms, and the first wave of  
989 transformation projects from "champion" or "early adopter" agencies within the Government

### 990 *Consolidate*

- 991 In this phase, the focus shifts towards driving take-up of the initial services, expanding the initial one-  
992 stop service over more channels, learning from user feedback, and using that feedback to specify  
993 changes to the business and technology architectures being developed as longer term, strategic  
994 solutions

### 995 *Transform*

- 996 Finally, the program looks to build out the broader range of e-transformation projects, drive forward  
997 the migration of all major customer-facing services towards the new one-stop channels, and  
998 complete the transition to the full strategic IT platform needed to guarantee future agility as  
999 business and customer priorities change.

## 1000 Part III (b): Guidance on the TGF Customer Management 1001 Framework

### 1002 Introduction

1003 The TGF Customer Management Framework is in three main sections:

- 1004 • Context
- 1005 • Overview of key components in the TGF Customer Management Framework
- 1006 • Detailed description of and guidance on the key components

### 1007 Context

1008 The first of the Guiding Principles identified in Component 1 of the TGF is:

1009 *“We believe in detailed and segmented understanding of our citizen and business*  
1010 *customers:*

- 1011 • *These customers should be owned at the whole-of-government level;*
- 1012 • *Decisions should be based upon the results of research rather than*  
1013 *assumptions being made about what customers think;*
- 1014 • *Real-time, event-level understanding of citizen and business interactions with*  
1015 *government should be developed”*

1016 Putting these principles into practice involves taking a holistic, market-driven approach to every step  
1017 of the service design and delivery process. This in turn often requires new skills and management  
1018 practices to be brought into government. The TGF Customer Management Framework draws  
1019 together best practice on how to do this.

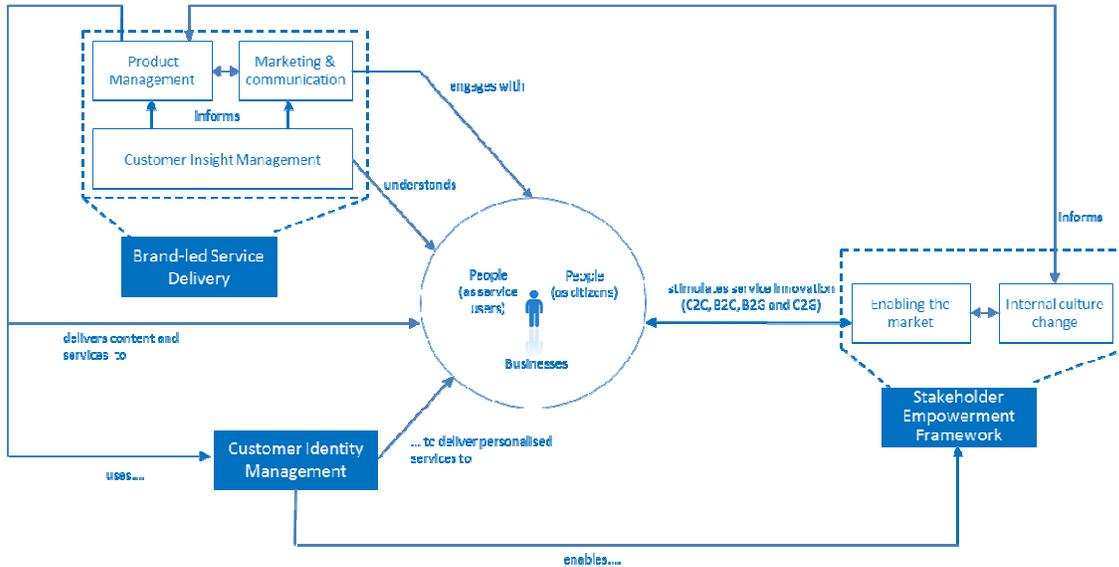

### 1020 Overview of key components in the TGF Customer Management 1021 Framework

1022 There are three key components of the TGF Customer Management Framework:

- 1023 • Brand-led Service Delivery
- 1024 • Identity Management
- 1025 • Stakeholder Empowerment

1026 A high level view of the logical relationships between these components is illustrated below.

This is a Non-Standards Track Work Product.  
The patent provisions of the OASIS IPR Policy do not apply.

1027  
1028 Figure 17: *Overview of the Customer Management Framework*

## 1029 Brand and Marketing Strategy

1030 Marketing is critical to effective transformational government, yet is something at which government  
1031 traditionally does not excel. Often, marketing is fundamentally misunderstood within government -  
1032 as being equivalent to advertising or perhaps, more broadly, as being equivalent to communication.

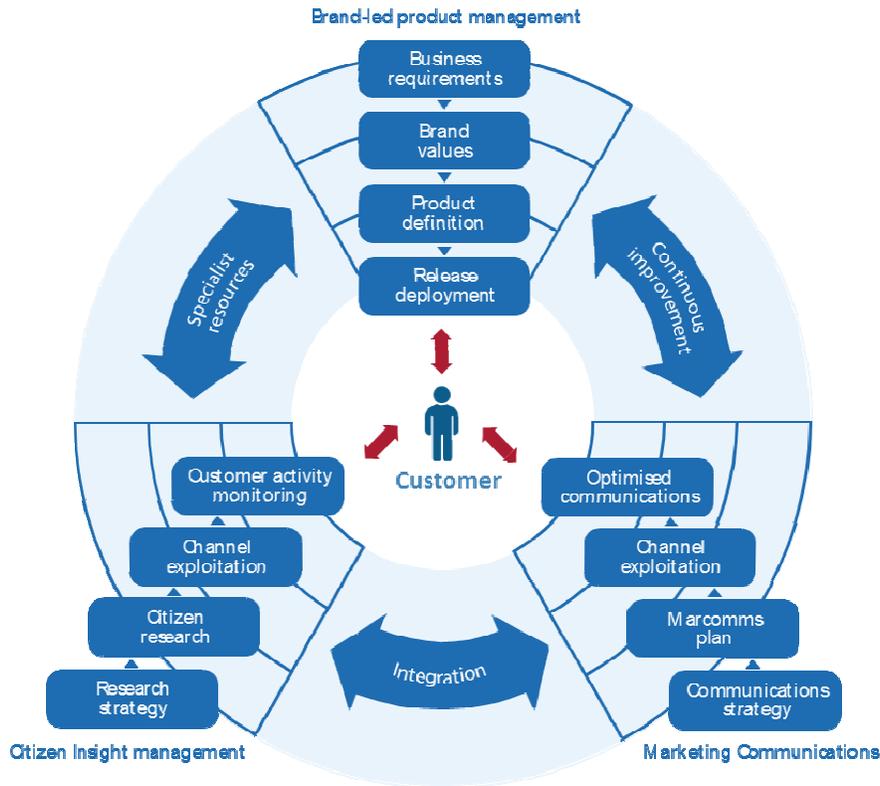

1033 Properly understood, however, marketing is the process of:

- 1034 • Understanding the target market for government services in all its breadth and complexity
- 1035 • Learning what is needed in order to meet customer needs
- 1036 • Developing an offer for citizens and businesses that they will engage with
- 1037 • Establishing a clear set of brand values for that offer - a set of underpinning statements that
- 1038 adequately describe what the product or service will deliver and how
- 1039 • Delivering that offer through appropriate channels, in a way which fully delivers on the brand
- 1040 values
- 1041 • Generating awareness about the offer
- 1042 • Creating desire/demand for the offer
- 1043 • Reminding people
- 1044 • Changing the offer in the light of experience

1045 This is the process that a brand-led consumer product company such as Proctor and Gamble or Virgin  
1046 would go through when developing a new product. However, it is not typically how governments  
1047 manage their own service development, and governments generally lack the skills to do it.  
1048 Moreover, the challenge faced by governments is significantly more complex than any private sector  
1049 company, given the greater range and complexity of services and governments need to provide a  
1050 universal service rather than pick and choose its customers. Yet if governments are to succeed in the  
1051 ambition of shifting service delivery decisively away from traditional channels to lower-cost digital  
1052 channels, then these marketing challenges have to be met.

1053 And given the fact that a) customer needs cut across organisational boundaries in government and b)  
1054 the skills for delivering an effective brand-led marketing approach to service transformation will  
1055 inevitably be in short supply, it is important that these challenges are addressed at a government-  
1056 wide level.

1057 A TGF-conformant Transformation Program will establish government-wide processes for managing  
1058 the three core elements of the TGF Brand-led Service Delivery Framework illustrated below:

1059  
1060 Figure 18: *Brand-led Service Delivery Framework*

- 1061 • Customer insight
- 1062 • Brand-led product management
- 1063 • Marketing communications

1064 Customer insight must inform all aspects of the process, and involves a comprehensive programme  
1065 of qualitative and quantitative research to understand and segment the customer base for  
1066 government services. The learnings from this need to be fed into a brand-led product management  
1067 process - not as a one-off input of initial research, but through a continuous process of iterative  
1068 design and customer testing. A key output from this will be a set of brand values for the service,  
1069 which then need to drive all aspects of service delivery, and marketing communications for the  
1070 service.

1071 This is an iterative process of continuous improvement, not a linear one. Continuous customer  
1072 insight research is needed to ensure that both the service delivery experience and the marcoms  
1073 activity remain aligned with the brand values, through successive phases of release deployment. As

1074 the service is implemented, across a range of channels, best practice management information  
1075 systems can be deployed to ensure that the Government now has real-time, event-level  
1076 management information about the experience of all customers - which in turn provides a powerful  
1077 feedback loop into further innovation in the service design.

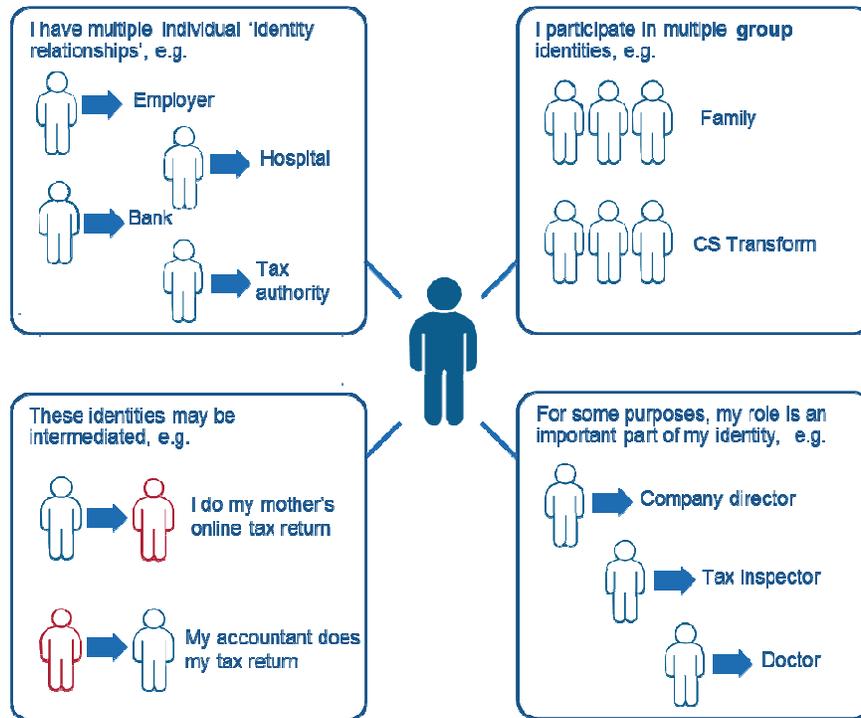

1078 Often, this will require the Government to bring in specialist resources, because typically it may face  
1079 significant gaps in terms of the people and skills needed to manage brand-led product development  
1080 and marketing cycles of this nature.

## 1081 Identity Management

1082 Identity management is a key enabler, yet something with which most governments struggle. At the  
1083 heart of that struggle is often a failure to put the customer at the centre of government's thinking  
1084 about identity.

1085 A wide range of agencies, standards bodies and advocacy groups are deeply involved in many  
1086 aspects of this work, from technical models for privacy management (such as the OASIS PMRM  
1087 technical committee<sup>13</sup>) through to the business, legal and social issues around online identity  
1088 assurance (such as promoted by Open Identity Exchange, OIX<sup>14</sup>). It is not the purpose of the  
1089 Transformational Government Framework to address the details of identity management or  
1090 recommend specific policies or approaches but rather to give high-level guidance on the main issues  
1091 that a conformant program should seek to address.

1092 Identity is a complex, and by definition deeply personal, concept. As the following figure illustrates, a  
1093 single person in fact has multiple, overlapping "identities".

1094

<sup>13</sup> See [http://www.oasis-open.org/committees/tc\\_home.php?wg\\_abbrev=pmrm](http://www.oasis-open.org/committees/tc_home.php?wg_abbrev=pmrm)

<sup>14</sup> See <http://openidentityexchange.org/>

1095 Figure 19: *Complexity of identities*

1096 Each identity may be associated with different rights and permissions, even different addresses.  
1097 These identities overlap, but in some cases the individual concerned may want to keep them  
1098 separate in order to protect his or her privacy. At other times, he or she may want them to be joined  
1099 up, and be frustrated at constantly having to furnish government with the same information over  
1100 and over again.

1101 Governments have often struggled to manage this complexity. Typically, identity is defined  
1102 separately in relation to each silo-based government service. Even countries which have traditionally  
1103 had the simplicity of a single citizen identifier (such as Finland, where there has been a single  
1104 population register since 1634), have tended to build up separate and inconsistent business  
1105 processes for identity verification. Although the advent of e-Government held out the promise of  
1106 significant simplification of identity management - bringing service improvement gains for the  
1107 customer and efficiency savings for the Government - significant barriers remain. These include legal  
1108 barriers that have grown up over centuries of piecemeal approaches taken by public administrations  
1109 (as well as, more recently, also by the private sector) and put in place often to protect individuals  
1110 from the effects of equally piecemeal processes. As such the impact of any changes must be  
1111 considered very carefully.

1112 Many of the tools which governments have put in place to guarantee security in the online world  
1113 (passwords, PINs, digital signatures etc), have in practice acted as barriers to take-up of online  
1114 services. And attempts to join up databases to enable cross-government efficiencies and service  
1115 improvements have often been met with mistrust and suspicion by users.

1116 Increasingly, however, a set of best practices is emerging around the world which we believe  
1117 represents a way forward for transformational government, which is broadly applicable across a very  
1118 wide range of governments.

1119 Key aspects of this are:

1120 *Business Architecture*

1121 Firstly, a business architecture for identity management which is based on federation between a  
1122 wide range of trusted organisations (the Government, banks, employers etc), and a clear model for  
1123 cross-trust between these organisations.

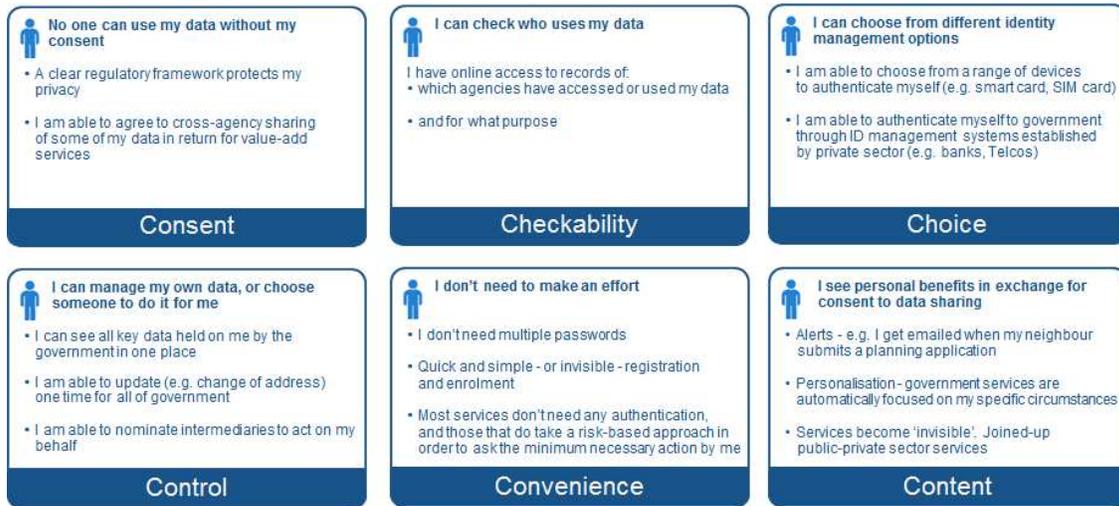

1124 *Technical Architecture*

1125 Secondly, a technology architecture to support this which does not rely on monolithic and potentially  
1126 vulnerable large databases, but which, in line with the SOA paradigm, uses Internet-based gateway  
1127 services to act as a broker between the different databases and IT systems of participants in the  
1128 federated trust model.

1129 *Customer-centric Identity Model*

1130 Thirdly - and perhaps most importantly - a customer service model for identity management which  
1131 places individuals themselves directly in control of their own data, able to manage their own  
1132 relationship with government – whether on their own behalf as citizens or in another identity

1133 relationship or intermediated role – and with clearly visible controls to reassure them that this is the  
1134 case. This customer-centric approach to identity management is illustrated in the figure below.

1135  
1136 Figure 20: Overview of Customer-Centric Identity Model

1137 No one-Government has implemented all features of this approach, but all are being successfully  
1138 deployed around the world, and together they represent our view of the approach to identity  
1139 management which will best help deliver Transformational Government.

## 1140 Stakeholder Empowerment Framework

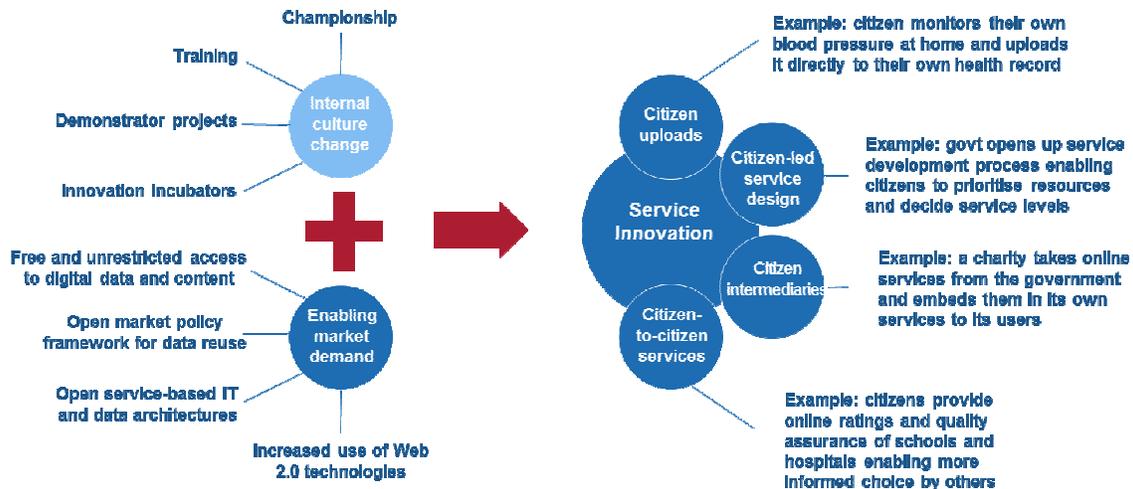

1141 We argued in Part I of the TGF that a defining feature of Transformational Government programs is  
1142 that they focus on the active stakeholder not the passive "consumer" - that is, they seek to engage  
1143 with citizens and businesses as owners of and participants in the creation of public services, not as  
1144 passive recipients of services.

1145 What does this mean in practice?

1146 Stakeholder empowerment involves a set of changes which are much more fundamental than the  
1147 online consultations and "e-participation" initiatives which characterised the first wave of  
1148 e-Government programmes. It is also more fundamental than the application of the latest  
1149 generation of technologies to government - although such technologies do have a role to play.

1150 The key shift is to think of service delivery not as something which is done by government to citizens  
1151 and businesses but as something in which they are active co-creators of services - or even where  
1152 public services are delivered directly citizen-to-citizen with no or minimal government involvement.  
1153 Innovators in government who are making that shift are starting to develop a wide range of new  
1154 ways to create public value and enhance services, as illustrated:

This is a Non-Standards Track Work Product.  
 The patent provisions of the OASIS IPR Policy do not apply.

1155  
 1156

Figure 21: Overview of Stakeholder Empowerment Framework

1157 This figure also highlights two important enablers of this innovation, which we believe are important  
 1158 to address as part of a Transformational Government program:

- 1159 • Action on the supply side within government, to help create a culture of open innovation within  
 1160 the public sector. Such a culture change - which reflects an increasing trend in the private sector  
 1161 to see external ideas and collaborations as being the key to successful innovation - is particularly  
 1162 challenging in the public sector given the strong tradition of internal control over decision-  
 1163 making and policy development. So pro-active change management is essential.
- 1164 • Action to enable demand-side pull by customers and third party organisations  
 1165 outside-Government. Particularly important here is the principle that all non-personal data held  
 1166 by government should be open, public, easily reusable, and available at marginal cost - which for  
 1167 digital information means free. By opening up government data, content and services for reuse  
 1168 and repurposing by others, government can enable a level of service innovation and market  
 1169 reach that it could not hope to achieve on its own. Most governments also find that simply  
 1170 making data and content available in theory is not sufficient: in practice they also need to  
 1171 facilitate market-based public service delivery by:
  - 1172 – building a business model of rules and processes which enable a level-playing field for new  
 1173 market entrants (see the “Wholesale Intermediary Market” component of Part III (b))
  - 1174 – establishing a service-oriented technology architecture based around open standards and  
 1175 technologies which makes it easier in practical terms for third parties to re-purpose and  
 1176 repackage-Government content (see Part III (d)).

---

## 1177 Part III (c): Guidance on the TGF Channel Management 1178 Framework

### 1179 Introduction

1180 The TGF Channel Management Framework is in two main sections:

- 1181 • Context
- 1182 • Overview of key components in the TGF Channel Management Framework
- 1183 Detailed description of and guidance on the key components

### 1184 Context

1185 Channel management is often a weak spot in government service delivery, with widespread  
1186 duplication, inefficiency and lack of user-focus. Experience has shown the common pitfalls to include:

- 1187 • Managing new, digital channels as "bolt-ons", with business and technical architectures which  
1188 are entirely separate from traditional face-to-face or paper-based channels
- 1189 • No common view of customer service across multiple channels
- 1190 • Operational practices, unit costs and service standards for many channels which fall well below  
1191 standards set for those channels in the private sector
- 1192 • A reliance on government-owned channels, with insufficient understanding of how to partner  
1193 with private and voluntary sector organisations who have existing trusted channels to  
1194 government customers
- 1195 • Unproductive and costly competition among service delivery channels

1196 Transformational Government programs seek to avoid these pitfalls, by building a channel  
1197 management approach centred around the needs and behaviour of citizens and businesses.

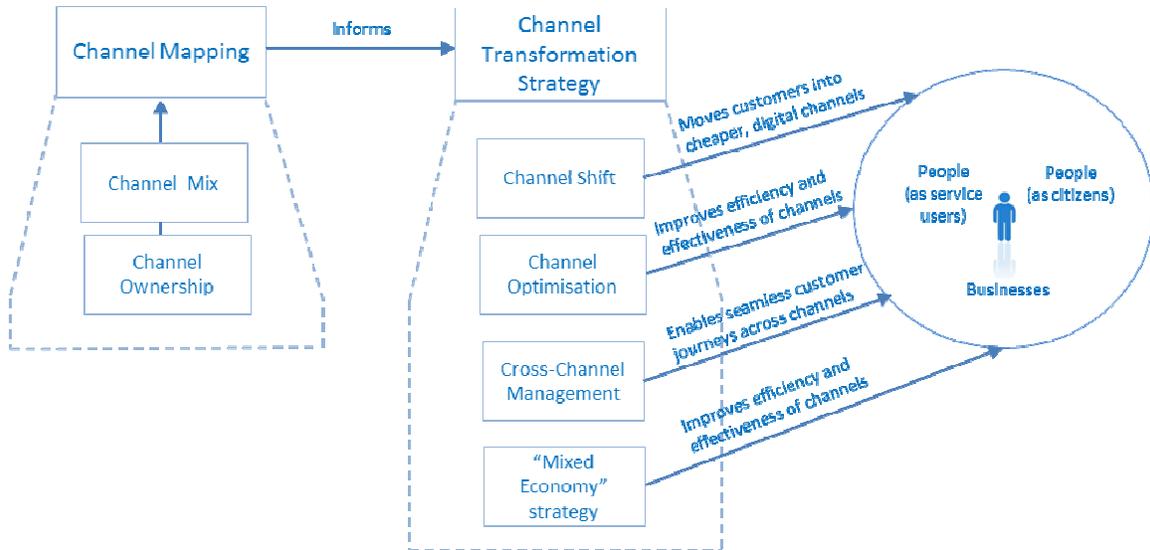

### 1198 Overview of key components in the TGF Channel Management 1199 Framework

1200 The two key elements of the approach recommended in the Transformational Government  
1201 Framework are:

- 1202 • **Channel Mapping:** a clear audit of what existing channels are currently used to deliver  
1203 government services. The TGF Channel Mapping approach includes an analysis of these channels  
1204 across two key dimensions: which delivery channels are being used ('channel mix') and who  
1205 owns them ('channel ownership').
- 1206 • **Channel Transformation Strategy:** the TGF helps build a new channel management approach  
1207 centred around the needs and behaviour of citizens and businesses. The key components of such  
1208 an approach include:
  - 1209 – Channel Optimization
  - 1210 – Channel Shift
  - 1211 – Cross-Channel Management

- 1212 – Development of a “mixed economy” in service provision through private and voluntary  
1213 sector intermediaries.

1214 A high level view of the logical relationships between these components is illustrated below.

1215  
1216 Figure 22: Overview of the Channel Management Framework

## 1217 Channel Mapping

1218 A vital first step in developing a customer-centric channel management strategy is to carry out a  
1219 mapping of existing delivery channels across government, and to put a cost to each transaction  
1220 delivered through these channels based on standard industry assumptions. This will highlight  
1221 duplication across government (for example, having multiple high-street locations in the same town  
1222 serving different government departments or agencies), and the savings that can be achieved by  
1223 joining government services together and using the most efficient delivery channel in each case.

1224 A common finding in channel audits of this type is that much contact between governments and  
1225 customer is unnecessary, hidden and uncosted. For example, many governments have literally  
1226 thousands of public service telephone contact numbers.

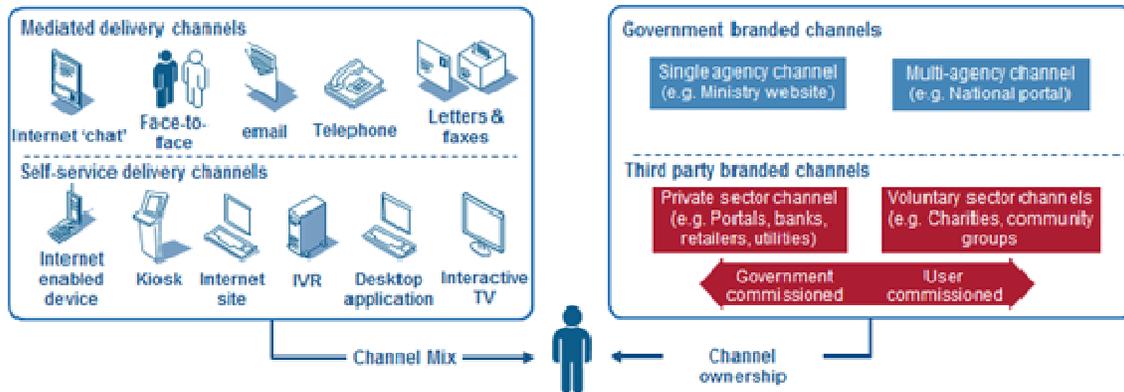

1227 Much of the contact that results between citizen or business users and the Government is therefore:

- 1228 • unnecessary - because the user is struggling to find the right place to get the service they need,  
1229 resulting in multiple contacts before their need is finally resolved  
1230 • hidden and uncosted - because only some of these customer contacts are caught by existing  
1231 management information systems. The rest are just lost within the broader operational  
1232 structure and budget of government.

1233 A clear map of customer interactions by channel, and the true costs of these, therefore provides  
1234 essential data in building the business case for service transformation.

1235 In undertaking this mapping, we recommend that a holistic approach is taken to understanding the  
1236 range of channels through which government services are and could be delivered. Government  
1237 services can be delivered through a wide range of different channels. It can be helpful to think of that  
1238 range as varying across two key dimensions, as illustrated below:

- 1239 • **Channel mix:** that is, the physical type of channel being used. Traditionally, channels for  
1240 government service delivery have included the face-to-face channel (through high-street and  
1241 other locations), traditional mail and the traditional telephone. More recently, interactive voice  
1242 recognition (IVR) and the Internet have become important channels. A key distinction is the  
1243 extent to which the channel is based around self-service by the customer, or requires some form  
1244 of intermediation - either in person (e.g. the customer visiting a government office or an official  
1245 visiting the citizens in the community) or remotely (e.g. by telephone or email).
- 1246 • **Channel ownership:** it is important to understand, too, the variety of "channel ownership"  
1247 options which are available. Traditionally, channels for government services have been branded  
1248 as belonging to a specific government agency. Increasingly, governments looking to develop a  
1249 customer-centric approach have also started to badge these on a government-wide basis: either  
1250 covering a single channel (such as a national government portal), or multiple channels (such as  
1251 Service Canada, which spans walk-in offices, contact centres, and the web).

1252 Figure 23: Overview of Channel Mapping  
1253

## 1254 Channel Transformation Strategy

1255 Once a full Channel Mapping has captured the current channel mix and cost base, it is important to  
1256 map out a strategy for the future desired channel mix, and the future customer experience over  
1257 different channels.

1258 The key elements of this Channel Transformation Strategy are discussed below.

### 1259 Channel Shift

1260 Successful private-sector businesses are more effective at this than government. They understand  
1261 that each channel opens up different ways to create value for customers, so they differentiate  
1262 services across channels. They also take a hard-nosed approach to channel management, with  
1263 customers being incentivised to use the channels that are most efficient from a business point of  
1264 view. And they realise that channel shift is a complicated process, which needs planning over a multi-  
1265 year period.

1266 Transformational Government programs adopt a similar approach, setting out clear strategies for  
1267 channel shift<sup>7</sup>. Typically though they recognise two distinct differences between the public and  
1268 private sector:

- 1269 • First, government has an obligation to provide services on a universal basis, so is not able to pick  
1270 and choose which customers it will engage with through different channels. "Directed choice"  
1271 towards cheaper channels is therefore the strategy selected for most customer-facing services  
1272 (although a number of governments are increasingly looking to make Internet-only services the  
1273 norm for businesses).
- 1274 • Second, in terms of the online channel, government is in a unique position compared with any  
1275 other online service provider. Whereas an online bank or retailer is limited by the size of the  
1276 online population in the market, a government can take action significantly to increase that  
1277 online population. "Digital inclusion" policies, aimed at increasing the proportion of individuals  
1278 who have access to and confidence in using online channels, are therefore an important part of  
1279 government channel strategies which would not normally be seen in their private-sector  
1280 counterparts.

### 1281 *Channel optimisation*

1282 As well as seeking to shift future service delivery to an optimal channel mix, Transformational  
1283 Government programs seek to optimise the performance of each individual channel. In the UK for  
1284 example, a government-wide review<sup>15</sup> of customer contact found that contact centre performance  
1285 lagged significantly behind private sector benchmarks, and that on average operational savings of  
1286 25% could be achieved in public centre contact centres over a 3 year period by adopting best  
1287 practices.

### 1288 *Cross-Channel Service Management*

1289 However, it is vital not to think about channel optimisation solely on a channel-by-channel basis.  
1290 There are two imperatives for taking a cross-channel approach to service delivery:

- 1291 • First, to improve service to customers. Customers do not simply want services to be  
1292 available through a choice of channels. Rather they want services to be delivered in an  
1293 integrated way across channels. Transformational Government programs therefore focus on  
1294 achieving an integrated view of customer interactions across all channels.
- 1295 • Second, to reduce costs. A shared service approach to channel management can deliver  
1296 significant efficiency savings. By building channel support services around a common, web-based  
1297 infrastructure, governments can both reduce costs while also facilitating joined-up services.

### 1298 *Development of a Mixed Economy in Service Provision*

1299 Finally, it is essential to recognise that a customer-centric approach involves delivering services  
1300 where customers want to receive them - and this may often mean that it is important to deliver  
1301 services through private or voluntary sector intermediaries.

1302 This is particularly important as services become digitised, potentially reducing the marginal costs of  
1303 delivery to near zero and hence making it easier for third party organisations to bundle public sector  
1304 services with their own service offerings. This can be challenging for governments, however, since  
1305 for the first time it means that they are "competing" for customers with other organisations.

---

<sup>15</sup> *Service Transformation: A better service for citizens and businesses, a better deal for taxpayers*, see  
[http://webarchive.nationalarchives.gov.uk/+http://www.hm-treasury.gov.uk/media/4/F/pbr06\\_varney\\_review.pdf](http://webarchive.nationalarchives.gov.uk/+http://www.hm-treasury.gov.uk/media/4/F/pbr06_varney_review.pdf)

This is a Non-Standards Track Work Product.  
The patent provisions of the OASIS IPR Policy do not apply.

1306 Establishing clear ground rules for how this sort of mixed economy of service provision should work,  
1307 on a basis that will encourage private and voluntary sector organisations to become actively  
1308 involved, is therefore an important task for government in creating the policy framework for  
1309 Transformational Government and SHOULD be addressed using the Franchise Marketplace Model  
1310 outlined above.

---

## 1311 Part III (d): Guidance on the TGF Technology 1312 Management Framework

1313 The TGF Technology Management Framework is in three main sections:

- 1314 • Context
- 1315 • Overview of key components in the TGF Technology Management Framework
- 1316 • Detailed description of and guidance on the key components

### 1317 Context

1318 The transformations to business, customer and channel management described above require a new  
1319 approach to technology and in particular a commitment to the paradigm and principles of Service  
1320 Oriented Architecture (SOA) and SOA-based infrastructure, as defined in the OASIS 'Reference Model  
1321 for Service-Oriented Architecture [SOA-RM].

1322 Transformational Government demands a single view of the citizen or business, delivered inside an  
1323 integrated business and channels architecture. In terms of ICT, all of this requires governments to  
1324 learn from private-sector best practice. Industry is moving towards a model of company-wide,  
1325 service-orientated enterprise architecture, where common building blocks using open standards can  
1326 be re-used to enable flexible and adaptive use of technology to react quickly to changing customer  
1327 needs and demands. Increasingly, companies are gaining even greater efficiency benefits by  
1328 managing these building blocks as a service, provided not only from within their own ICT architecture  
1329 but also from within "the Cloud" - the dynamically-scalable set of private and public computing  
1330 resources now being offered as a service over the Internet.

1331 Governments are increasingly taking this 'building block' approach to technology development. Key  
1332 building blocks such as ICT infrastructure, common data sets, and identity verification need to be co-  
1333 ordinated effectively. While much can be learned from the private sector, simply importing industry  
1334 practices will not solve this coordination problem within government.

1335 Governments are taking different approaches to the co-ordination function: some build central  
1336 infrastructure for use by all departments and agencies; others identify lead departments to build and  
1337 implement common solutions; others have a more decentralised approach, allowing departments to  
1338 develop their own solutions according to a common architecture and standard set. However, finding  
1339 an effective approach which works within a specific government is vital, since without this sort of  
1340 technology flexibility, then Transformational Government becomes impossible - or possible only at  
1341 great expense and with significant wasteful and duplicated ICT expenditure.

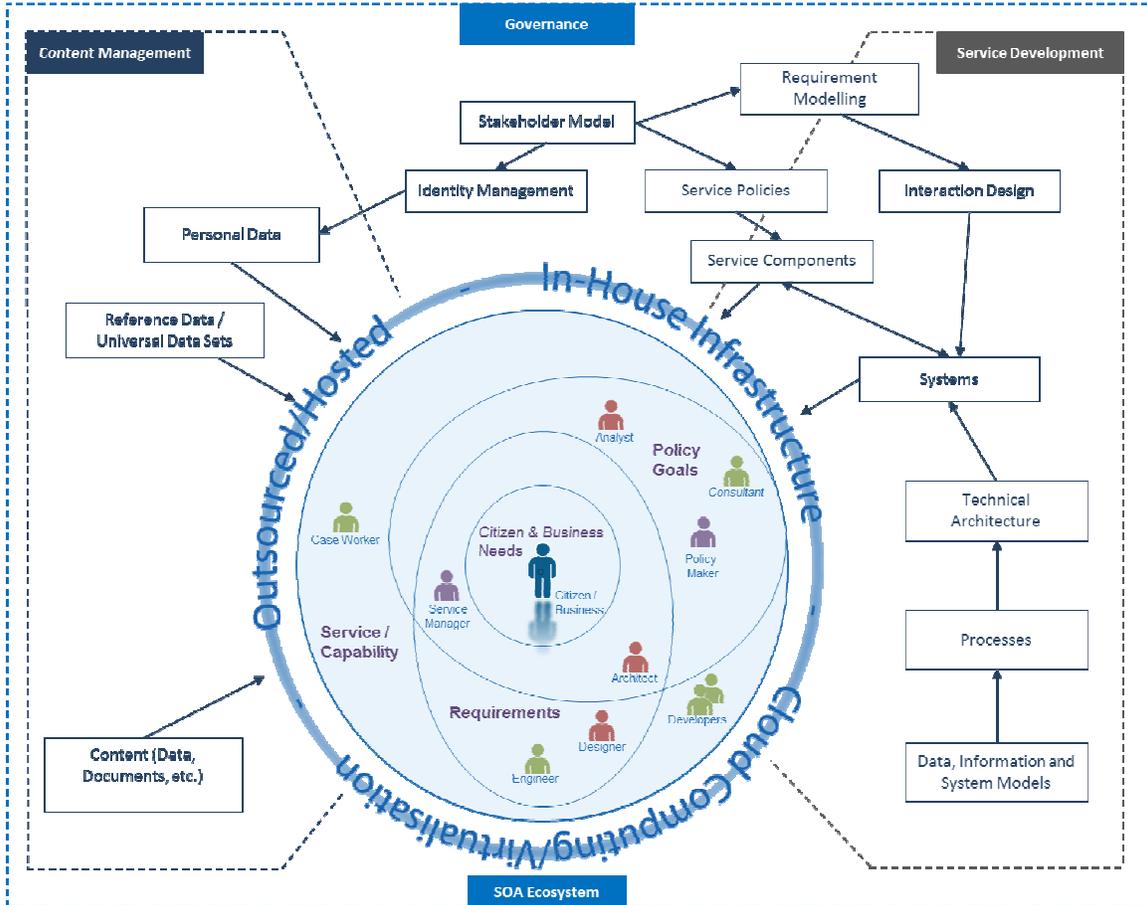

### 1342 Overview of key components in the TGF Technology Management 1343 Framework

1344 The Technology Management Framework is modelled as one of the four TGF delivery processes, but  
1345 it is concerned with more than "just" the delivery of services using ICT. Its focus on the SOA  
1346 paradigm is key to an approach that puts citizens and businesses as customers at the centre of a  
1347 service ecosystem with many stakeholders, roles and systems involved.

1348 The three key elements of the approach recommended in the Transformational Government  
1349 Framework are:

- 1350 • Resources Management which underpins ecosystem governance
- 1351 • Ecosystem Participation
- 1352 • Realisation and governance of SOA-based ICT systems

1353 A high level view of the logical relationships between these components is illustrated below.

1354  
1355 Figure 24: Overview of Technology Management Framework

## 1356 Resources Management

1357 This entails the explicit identification and management of resources as valued assets, whether  
1358 information resources (data sets, documents, models, processes, etc.) and technology 'soft products'  
1359 (systems, applications and services).

## 1360 Eco-system Participation

1361 Best practice technology management requires a clear model and understanding of the stakeholders,  
1362 actors and systems that comprise the overall service ecosystem and their relationships to each other.  
1363 The model must be maintained and updated as stakeholders change over time and over the course  
1364 of any development effort thus ensuring that requirements are continually evaluated and revised.  
1365

1366 Citizens and businesses, as potential customers, must be understood as stakeholders in the  
1367 ecosystem with ‘needs’ (often imprecisely formulated) that they seek to satisfy through use of a  
1368 service; but citizens and businesspeople are also human actors interacting with pieces of technology  
1369 in precisely-defined interactions. These system-focussed interactions are a result of accurately  
1370 modelling the processes required of both system and user in order to deliver a particular service  
1371 capability conforming to explicit ‘requirements’. Requirements in turn are revised and updated to  
1372 reflect changes in stakeholder composition and concerns.

1373 Stakeholders are clearly distinguished and modelled – including the fact that they play different roles  
1374 in different contexts (and which therefore has implications for role-based authentication).  
1375 Stakeholder composition is also a good predictor of project risk – understand and modelling  
1376 stakeholder types helps identify and mitigate risk. Stakeholder modelling underlines that every  
1377 participant in an ICT development project is implicitly an intermediary representing diverse  
1378 stakeholder interests in the deployed service.

### 1379 SOA-based system realisation and governance

1380 Service-Oriented Architecture (SOA) must be understood in its broadest sense – as a paradigm for  
1381 organising and using capabilities distributed and managed across different ownership domains. In  
1382 this sense, SOA is technology and platform agnostic and thus provides an appropriate foundation for  
1383 the technology management framework.

1384 Disparate systems are weaved together as part of a coherent ecosystem while specific ‘services’,  
1385 broken down into functional components, are identifiable as distinct from the underlying  
1386 technologies that deliver them. This encourages ecosystem agility, allowing services to be mixed and  
1387 matched, composed and re-used – it remains agile and flexible without being brittle, as with many  
1388 systems where service functionality is tailored and tightly-coupled to addressing a specific problem.  
1389 Ownership and governance – of information resources as well as ICT products – is federated across  
1390 ownership boundaries and explicit service descriptions and contracts ensure that everyone knows  
1391 the ‘rules of engagement and use’ when using any service.

1392 Key concerns of such an approach include:

- 1393 – SOA technical architecture and component service (“building block”) realisation and re-use;
- 1394 – Service policies;
- 1395 – Identity Management;
- 1396 – Cloud Computing (Service and Infrastructure Virtualisation);
- 1397 – Interaction Design, based on end-user needs

1398

## 1399 Acknowledgements

1400 The following individuals have participated in the creation of this specification and are gratefully  
1401 acknowledged:

1402 Participants:

1403 Hans Aanesen, Individual Member  
1404 Oliver Bell, Microsoft Corporation  
1405 John Borrás, Individual Member  
1406 Peter F Brown, Individual Member  
1407 Bill Edwards, CS Transform Ltd  
1408 Chet Ensign, Individual Member  
1409 Nig Greenaway, Fujitsu Ltd  
1410 Ted Haas, GS1  
1411 Andy Hopkirk, Individual Member  
1412 Gershon Janssen, Individual Member  
1413 Arnaud Martens, Belgian SPF Finances  
1414 Steve Mutkoski, Microsoft Corporation  
1415 Monica Palmirani, University of Bologna  
1416 Chris Parker, CS Transform Ltd  
1417 John Ross, Individual Member  
1418 Pothiraj Selvaraj, GCE  
1419 Trond Arne Undheim, Oracle Corporation  
1420 Colin Wallis, New Zealand Government  
1421 David Webber, Oracle Corporation  
1422 Joe Wheeler, MTG Management Consultants, LLC  
1423 Takao Yamasaki, Nomura Research Institute

## 1424 Revision History

- 1425 17-03-2011: (compared to Working Draft 02) Finalised remaining edits agreed by TC at adoption;  
1426 Update of ToC; Numbering of Figures
- 1427 13-11-2011: Incorporation of edits proposed in line with comments to Committee Note Draft Public  
1428 Review and alignment with “TGF Pattern Language – Core Patterns” WD05
