#### Abstract:

This specification (WS-MakeConnection) describes a protocol that allows messages to be transferred between nodes implementing this protocol by using a transport-specific back-channel. The protocol is described in this specification in a transport-independent manner allowing it to be implemented using different network technologies. To support interoperable Web services, a SOAP binding is defined within this specification.

The protocol defined in this specification depends upon other Web services specifications for the identification of service endpoint addresses and policies. How these are identified and retrieved are detailed within those specifications and are out of scope for this document.

By using the XML [XML], SOAP [SOAP 1.1], [SOAP 1.2] and WSDL [WSDL 1.1] extensibility model, SOAP-based and WSDL-based specifications are designed to be composed with each other to define a rich Web services environment. As such, WS-MakeConnection by itself does not define all the

44 features required for a complete messaging solution. WS-MakeConnection is a building block that is  
45 used in conjunction with other specifications and application-specific protocols to accommodate a  
46 wide variety of requirements and scenarios related to the operation of distributed Web services.

47 **Status:**

48 This document was last revised or approved by the WS-RX Technical Committee on the above date.  
49 The level of approval is also listed above. Check the "Latest Version" or "Latest Approved Version"  
50 location noted above for possible later revisions of this document.

51 Technical Committee members should send comments on this specification to the Technical  
52 Committee's email list. Others should send comments to the Technical Committee by using the "Send  
53 A Comment" button on the Technical Committee's web page at [http://www.oasis-  
54 open.org/committees/ws-rx/](http://www.oasis-open.org/committees/ws-rx/).

55 For information on whether any patents have been disclosed that may be essential to implementing  
56 this specification, and any offers of patent licensing terms, please refer to the Intellectual Property  
57 Rights section of the Technical Committee web page ([http://www.oasis-open.org/committees/ws-  
58 rx/ipr.php](http://www.oasis-open.org/committees/ws-rx/ipr.php)).

59 The non-normative errata page for this specification is located at [http://www.oasis-  
60 open.org/committees/ws-rx/](http://www.oasis-open.org/committees/ws-rx/).

## 61 Notices

62 Copyright © OASIS® 1993–2007. All Rights Reserved. OASIS trademark, IPR and other policies apply.

63 All capitalized terms in the following text have the meanings assigned to them in the OASIS Intellectual  
64 Property Rights Policy (the "OASIS IPR Policy"). The full Policy may be found at the OASIS website.

65 This document and translations of it may be copied and furnished to others, and derivative works that  
66 comment on or otherwise explain it or assist in its implementation may be prepared, copied, published, and  
67 distributed, in whole or in part, without restriction of any kind, provided that the above copyright notice and  
68 this section are included on all such copies and derivative works. However, this document itself may not be  
69 modified in any way, including by removing the copyright notice or references to OASIS, except as needed  
70 for the purpose of developing any document or deliverable produced by an OASIS Technical Committee  
71 (in which case the rules applicable to copyrights, as set forth in the OASIS IPR Policy, must be followed) or  
72 as required to translate it into languages other than English.

73 The limited permissions granted above are perpetual and will not be revoked by OASIS or its successors  
74 or assigns.

75 This document and the information contained herein is provided on an "AS IS" basis and OASIS  
76 DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY  
77 WARRANTY THAT THE USE OF THE INFORMATION HEREIN WILL NOT INFRINGE ANY  
78 OWNERSHIP RIGHTS OR ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A  
79 PARTICULAR PURPOSE.

80 OASIS requests that any OASIS Party or any other party that believes it has patent claims that would  
81 necessarily be infringed by implementations of this OASIS Committee Specification or OASIS Standard, to  
82 notify OASIS TC Administrator and provide an indication of its willingness to grant patent licenses to such  
83 patent claims in a manner consistent with the IPR Mode of the OASIS Technical Committee that produced  
84 this specification.

85 OASIS invites any party to contact the OASIS TC Administrator if it is aware of a claim of ownership of any  
86 patent claims that would necessarily be infringed by implementations of this specification by a patent  
87 holder that is not willing to provide a license to such patent claims in a manner consistent with the IPR  
88 Mode of the OASIS Technical Committee that produced this specification. OASIS may include such claims  
89 on its website, but disclaims any obligation to do so.

90 OASIS takes no position regarding the validity or scope of any intellectual property or other rights that  
91 might be claimed to pertain to the implementation or use of the technology described in this document or  
92 the extent to which any license under such rights might or might not be available; neither does it represent  
93 that it has made any effort to identify any such rights. Information on OASIS' procedures with respect to  
94 rights in any document or deliverable produced by an OASIS Technical Committee can be found on the  
95 OASIS website. Copies of claims of rights made available for publication and any assurances of licenses  
96 to be made available, or the result of an attempt made to obtain a general license or permission for the use  
97 of such proprietary rights by implementers or users of this OASIS Committee Specification or OASIS  
98 Standard, can be obtained from the OASIS TC Administrator. OASIS makes no representation that any  
99 information or list of intellectual property rights will at any time be complete, or that any claims in such list  
100 are, in fact, Essential Claims.

101 The name "OASIS", WS-MakeConnection, WSMC, WSRM, WS-RX are trademarks of [OASIS](#), the owner  
102 and developer of this specification, and should be used only to refer to the organization and its official  
103 outputs. OASIS welcomes reference to, and implementation and use of, specifications, while reserving the  
104 right to enforce its marks against misleading uses. Please see [http://www.oasis-  
open.org/who/trademark.php](http://www.oasis-<br/>105 open.org/who/trademark.php) for above guidance.

# 132 1 Introduction

133 The primary goal of this specification is to create a mechanism for the transfer of messages between two  
134 endpoints when the sending endpoint is unable to initiate a new connection to the receiving endpoint. It  
135 defines a mechanism to uniquely identify non-addressable endpoints, and a mechanism by which  
136 messages destined for those endpoints can be delivered. It also defines a SOAP binding that is required  
137 for interoperability. Additional bindings can be defined.

138 This mechanism is extensible allowing additional functionality, such as security, to be tightly integrated.  
139 This specification integrates with and complements the WS-ReliableMessaging[[WS-RM](#)], WS-Security  
140 [[WS-Security](#)], WS-Policy [[WS-Policy](#)], and other Web services specifications. Combined, these allow for a  
141 broad range of reliable, secure messaging options.

## 142 1.1 Terminology

143 The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD  
144 NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described  
145 in RFC 2119 [[KEYWORDS](#)].

146 This specification uses the following syntax to define normative outlines for messages:

- 147 • The syntax appears as an XML instance, but values in italics indicate data types instead of values.
- 148 • Characters are appended to elements and attributes to indicate cardinality:
  - 149 ○ "?" (0 or 1)
  - 150 ○ "\*" (0 or more)
  - 151 ○ "+" (1 or more)
- 152 • The character "|" is used to indicate a choice between alternatives.
- 153 • The characters "[" and "]" are used to indicate that contained items are to be treated as a group  
154 with respect to cardinality or choice.
- 155 • An ellipsis (i.e. "...") indicates a point of extensibility that allows other child or attribute content  
156 specified in this document. Additional children elements and/or attributes MAY be added at the  
157 indicated extension points but they MUST NOT contradict the semantics of the parent and/or  
158 owner, respectively. If an extension is not recognized it SHOULD be ignored.
- 159 • XML namespace prefixes (see section 1.4) are used to indicate the namespace of the element  
160 being defined.

161 Elements and Attributes defined by this specification are referred to in the text of this document using  
162 XPath 1.0 [[XPATH 1.0](#)] expressions. Extensibility points are referred to using an extended version of this  
163 syntax:

- 164 • An element extensibility point is referred to using {any} in place of the element name. This  
165 indicates that any element name can be used, from any namespace other than the `wsmc:`  
166 namespace.
- 167 • An attribute extensibility point is referred to using @{any} in place of the attribute name. This  
168 indicates that any attribute name can be used, from any namespace other than the `wsmc:`  
169 namespace.

 249 <http://docs.oasis-open.org/wss/v1.1/wss-v1.1-spec-os-SOAPMessageSecurity.pdf>

## 250 1.4 Namespace

251 The XML namespace [XML-ns] URI that MUST be used by implementations of this specification is:

252 <http://docs.oasis-open.org/ws-rx/wsmc/200702>

253 Dereferencing the above URI will produce the Resource Directory Description Language [RDDL 2.0]  
 254 document that describes this namespace.

255 Table 1 lists the XML namespaces that are used in this specification. The choice of any namespace prefix  
 256 is arbitrary and not semantically significant. The assertions defined within this specification have been  
 257 designed to work independently of a specific version of WS-Policy and WS-Policy Attachment. Within this  
 258 specification the use of the namespace prefix "wsp" refers generically to the WS-Policy namespace, not a  
 259 specific version.

260 Table 1

Prefix	Namespace
S	(Either SOAP 1.1 or 1.2)
S11	<a href="http://schemas.xmlsoap.org/soap/envelope/">http://schemas.xmlsoap.org/soap/envelope/</a>

S12	<a href="http://www.w3.org/2003/05/soap-envelope">http://www.w3.org/2003/05/soap-envelope</a>
wsmc	<a href="http://docs.oasis-open.org/ws-rx/wsmc/200702">http://docs.oasis-open.org/ws-rx/wsmc/200702</a>
wstrm	<a href="http://docs.oasis-open.org/ws-rx/wstrm/200702">http://docs.oasis-open.org/ws-rx/wstrm/200702</a>
wsa	<a href="http://www.w3.org/2005/08/addressing">http://www.w3.org/2005/08/addressing</a>
wsam	<a href="http://www.w3.org/2007/02/addressing/metadata">http://www.w3.org/2007/02/addressing/metadata</a>
xs	<a href="http://www.w3.org/2001/XMLSchema">http://www.w3.org/2001/XMLSchema</a>

261 The normative schema for WS-MakeConnection can be found linked from the namespace document that  
 262 is located at the namespace URI specified above.

263 All sections explicitly noted as examples are informational and are not to be considered normative.

## 264 **1.5 Conformance**

265 An implementation is not conformant with this specification if it fails to satisfy one or more of the MUST or  
 266 REQUIRED level requirements defined herein. A SOAP Node MUST NOT use the XML namespace  
 267 identifier for this specification (listed in section 1.4) within SOAP Envelopes unless it is conformant with this  
 268 specification.

269 Normative text within this specification takes precedence over normative outlines, which in turn take  
 270 precedence over the XML Schema [[XML Schema Part 1](#), [Part 2](#)] descriptions.

## 271 2 MakeConnection Model

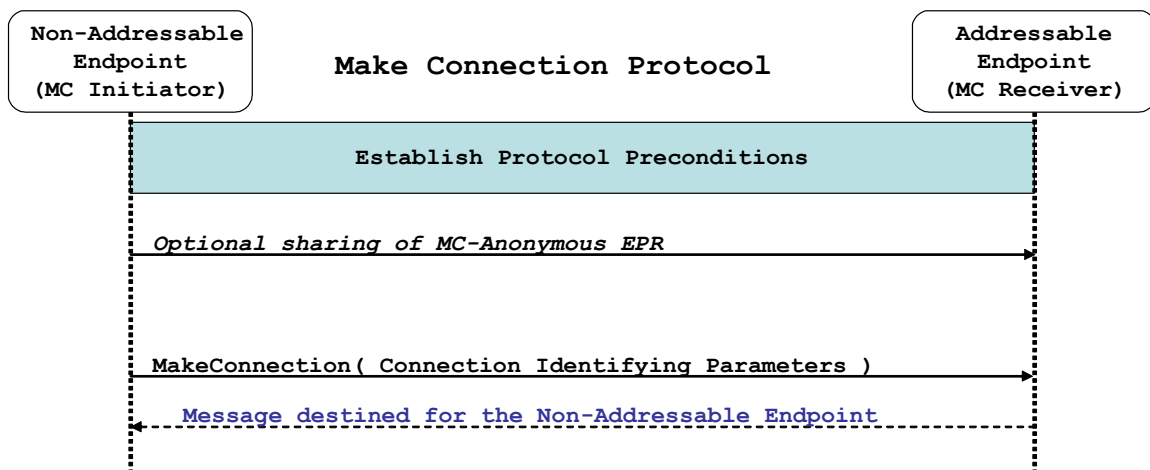

272 The WS-Addressing [WS-Addressing] specification defines the anonymous URI to identify non-  
273 addressable endpoints and to indicate a protocol-specific back-channel is to be used for any messages  
274 destined for that endpoint. For example, when used in the WS-Addressing ReplyTo EPR, the use of this  
275 anonymous URI is meant to indicate that any response message is to be transmitted on the transport-  
276 specific back-channel. In the HTTP case this would mean that any response message is sent back on the  
277 HTTP response flow.

278 In cases where the connection is still available the WS-Addressing URI is sufficient. However, in cases  
279 where the original connection is no longer available, additional mechanisms are needed. Take the situation  
280 where the original connection that carried a request message is broken and therefore is no longer  
281 available to carry a response back to the original sender. Traditionally, non-anonymous (addressable)  
282 EPRs would be used in these cases to allow for the sender of the response message to initiate new  
283 connections as needed. However, if the sender of the request message is unable (or unwilling) to accept  
284 new connections then the only option available is for it to establish a new connection for the purposes of  
285 allowing the response message to be sent. This specification defines a mechanism by which a new  
286 connection can be established.

287 The MakeConnection model consists of two key aspects:

- 288 • An optional anonymous-like URI template is defined that has similar semantics to WS-  
289 Addressing's anonymous, but also allows for each non-addressable endpoint to be uniquely  
290 identified
- 291 • A new message is defined that establishes a connection that can then be used to transmit  
292 messages to these non-addressable endpoints

293 Figure 1 below illustrates the overall flow involved in the use of MakeConnection:

294 Figure 1 – Make Connection Model

295 The MakeConnection message is used to establish a new connection between the two endpoints. Within  
296 the message is identifying information that is used to uniquely identify a message that is eligible for  
297 transmission.

## 298 2.1 Glossary

299 The following definitions are used throughout this specification:

300 **Back-channel:** When the underlying transport provides a mechanism to return a transport-protocol  
301 specific response, capable of carrying a SOAP message, without initiating a new connection, this  
302 specification refers to this mechanism as a back-channel.

303 **Endpoint:** As defined in the WS-Addressing specification; a Web service Endpoint is a (referenceable)  
304 entity, processor, or resource to which Web service messages can be addressed. Endpoint references  
305 (EPRs) convey the information needed to address a Web service Endpoint.

306 **MC Initiator** The endpoint that transmits the MakeConnection message – the destination endpoint for the  
307 messages being sent on the transport-specific back-channel.

308 **MC Receiver:** The endpoint that receives the MakeConnection message – the source endpoint for the  
309 messages being sent on the transport-specific back-channel.

310 **Receive:** The act of reading a message from a network connection.

311 **Transmit:** The act of writing a message to a network connection.

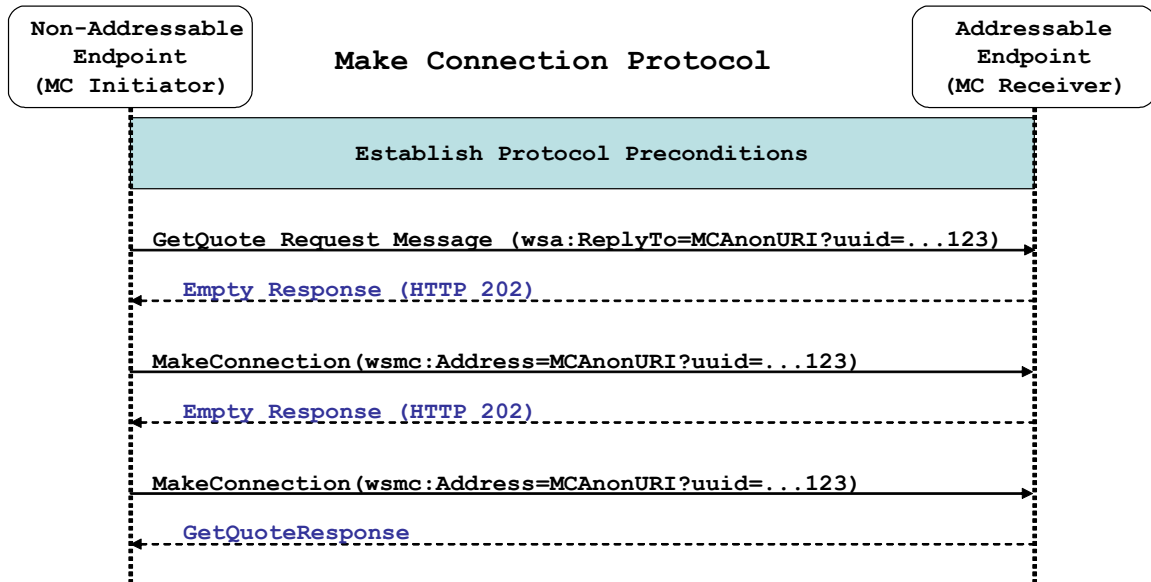

## 312 2.2 Protocol Preconditions

313 The correct operation of the protocol requires that a number of preconditions **MUST** be established prior to  
314 the processing of the initial sequenced message:

- 315 • The MC Receiver **MUST** be capable of accepting new incoming connections.
- 316 • The MC Initiator **MUST** be capable of creating new outgoing connections to the MC Receiver, and  
317 those connections **MUST** have a back-channel.
- 318 • If a secure exchange of messages is **REQUIRED**, then the MC Initiator and MC Receiver **MUST**  
319 have a security context.

## 320 2.3 Example Message Exchange

321 Figure 2 illustrates a message exchange in which the response message is delivered using  
322 MakeConnection.

323 Figure 2: Example WS-MakeConnection Message Exchange

324 1. The protocol preconditions are established. These include policy exchange, endpoint resolution,  
325 and establishing trust.

326 2. The client (MC Initiator) sends a GetQuote request message to the service (MC Receiver). The  
327 WS-Addressing `wsa:ReplyTo` EPR uses the MakeConnection Anonymous URI Template –  
328 indicating that if the GetQuoteResponse message is not sent back on this connection's back-  
329 channel, then the client will use MakeConnection to retrieve it.

330 3. The service receives the request message and decides to close the connection by sending back  
331 an empty response (in the HTTP case an HTTP 202 Accept is sent).

332 4. The client sends a MakeConnection message to the service. Within the MakeConnection element  
333 is the `wsmc:Address` element containing the same MakeConnection Anonymous URI in  
334 step 2.

335 5. The service has not completed executing the GetQuote operation and decides to close the  
336 connection by sending back an empty response (in the HTTP case an HTTP 202 Accept)  
337 indicating that no messages destined for this MC Initiator are available at this time.

338 6. The client sends a second MakeConnection message to the service. Within the MakeConnection  
339 element is the `wsmc:Address` element containing the same MakeConnection Anonymous URI  
340 used in step 2.

341 7. The service uses this new connection to transmit the GetQuoteResponse message.

342 The service can assume that because the MakeConnection Anonymous URI Template was used in the  
343 `wsa:ReplyTo` EPR the client will act as an MC Initiator for the purposes of retrieving messages destined  
344 to that EPR (i.e. responses to the GetQuote). This allows the service the option of immediately releasing  
345 resources used by the original connection – knowing that the client will, at some later point in time,  
346 establish a new connection on which the GetQuoteResponse can be transmitted. Likewise, when the first  
347 MakeConnection is received by the service, it again has the option of leaving the connection open until the  
348 GetQuoteResponse is ready to be transmitted, or it can close the connection immediately knowing that the  
349 MC Initiator will retransmit the MakeConnection message at some later point in time. Since the nature and  
350 dynamic characteristics of the underlying transport and potential intermediaries are unknown in the general  
351 case, the timing of re-transmissions cannot be specified. Additionally, over-aggressive re-transmissions  
352 have been demonstrated to cause transport or intermediary flooding which are counterproductive.  
353 Consequently, implementers are encouraged to utilize adaptive mechanisms that dynamically adjust re-

354 transmission time and the back-off intervals that are appropriate to the nature of the transports and  
355 intermediaries envisioned. For the case of TCP/IP transports, a mechanism similar to that described as  
356 RTTM in RFC 1323 [[RTTM](#)] SHOULD be considered.

357 Now that the basic model has been outlined, the details of this protocol are now provided in section 3.

---

## 358 3 MakeConnection

359 The following sub-sections define the various MakeConnection features, and prescribe their usage by a  
360 conformant implementations.

### 361 3.1 MakeConnection Anonymous URI

362 When an Endpoint is not directly addressable (e.g. behind a firewall or not able to allow incoming  
363 connections), an anonymous URI in the EPR address property can indicate such an Endpoint. The WS-  
364 Addressing anonymous URI is one such anonymous URI. This specification defines a URI template (the  
365 WS-MC anonymous URI) which may be used to uniquely identify anonymous Endpoints.

```
366 http://docs.oasis-open.org/ws-rx/wsmc/200702/anonymous?id={unique-String}
```

367 The appearance of an instance of this URI template in the `wsa:Address` value of an EPR indicates a  
368 protocol-specific back-channel will be established through a mechanism such as `MakeConnection`,  
369 defined below. When using this URI template, “{unique-String}” MUST be replaced by a globally unique  
370 string (e.g a UUID value as defined by RFC4122 [UUID]). This specification does not require the use of  
371 one particular string generation scheme. This string uniquely distinguishes the Endpoint. A sending  
372 Endpoint SHOULD Transmit messages at Endpoints identified with the URI template using a protocol-  
373 specific back-channel, including but not limited to those established with a `MakeConnection` message.  
374 Note, this URI template is semantically similar to the WS-Addressing anonymous URI if a protocol-specific  
375 back-channel is available.

### 376 3.2 MakeConnection Message

377 The `MakeConnection` element is sent in the body of a one-way message that establishes a  
378 contextualized back-channel for the transmission of messages according to matching criteria (defined  
379 below). In the non-faulting case, if no matching message is available then no SOAP envelope will be  
380 returned on the back-channel. A common usage will be a client sending `MakeConnection` to a server for  
381 the purpose of receiving asynchronous response messages.

382 The following exemplar defines the `MakeConnection` syntax:

```
383 <wsmc:MakeConnection ...>  
384   <wsmc:Address ...> xs:anyURI </wsmc:Address> ?  
385   <wsrm:Identifier ...> xs:anyURI </wsrm:Identifier> ?  
386   ...  
387 </wsmc:MakeConnection>
```

388 The following describes the content model of the `MakeConnection` element.

389 `/wsmc:MakeConnection`

390 This element allows the sender to create a transport-specific back-channel that can be used to  
391 return a message that matches the selection criteria. Endpoints MUST NOT send this element as  
392 a header block. At least one selection criteria sub-element MUST be specified – if not a  
393 `MissingSelection` fault MUST be generated.

394 `/wsmc:MakeConnection/wsmc:Address`

395 This element specifies the URI (`wsa:Address`) of the initiating Endpoint. Endpoints MUST NOT  
396 return messages on the transport-specific back-channel unless they have been addressed to this  
397 URI. This Address property and a message’s WS-Addressing destination property are considered  
398 identical when they are exactly the same character-for-character. Note that URIs which are not

399 identical in this sense may in fact be functionally equivalent. Examples include URI references  
400 which differ only in case, or which are in external entities which have different effective base URIs.

401 `/wsmc:MakeConnection/wsmc:Address/@{any}`

402 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to  
403 the element.

404 `/wsmc:MakeConnection/wsrn:Identifier`

405 This element specifies the WS-RM Sequence Identifier that establishes the context for the  
406 transport-specific back-channel. The Sequence Identifier should be compared with the Sequence  
407 Identifiers associated with the messages held by the sending Endpoint, and if there is a matching  
408 message it will be returned.

409 `/wsmc:MakeConnection/wsrn:Identifier/@{any}`

410 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to  
411 the element.

412 `/wsmc:MakeConnection/{any}`

413 This is an extensibility mechanism to allow different (extensible) types of information, based on a  
414 schema, to be passed. This allows fine-tuning of the messages to be returned, additional selection  
415 criteria included here are logically ANDed with the `Address` and/or `wsrn:Identifier`. If an  
416 extension is not supported by the Endpoint then it should generate an `UnsupportedSelection`  
417 fault.

418 `/wsmc:MakeConnection/@{any}`

419 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to  
420 the element.

421 If more than one selection criteria element is present, then the MC Receiver processing the  
422 `MakeConnection` message MUST insure that any SOAP Envelope flowing on the back-channel satisfies  
423 all of those selection criteria.

424 The management of messages that are awaiting the establishment of a back-channel to their receiving  
425 Endpoint is an implementation detail that is outside the scope of this specification. Note, however, that  
426 these messages form a class of asynchronous messages that is not dissimilar from "ordinary"  
427 asynchronous messages that are waiting for the establishment of a connection to their destination  
428 Endpoints.

429 This specification places no constraint on the types of messages that can be returned on the transport-  
430 specific back-channel. As in an asynchronous environment, it is up to the recipient of the  
431 `MakeConnection` message to decide which messages are appropriate for transmission to any particular  
432 Endpoint. However, the Endpoint processing the `MakeConnection` message MUST insure that the  
433 messages match the selection criteria as specified by the child elements of the `MakeConnection`  
434 element.

435 Since the message exchange pattern use by `MakeConnection` is untraditional, the following points need  
436 to be reiterated for clarification:

- 437 • The `MakeConnection` message is logically part of a one-way operation; there is no reply  
438 message to the `MakeConnection` itself, and any response flowing on the transport back-channel  
439 is a pending message.
- 440 • Since there is no reply message to `MakeConnection`, the WS-Addressing specific rules in  
441 section 3.4 "Formulating a Reply Message" are not used. Therefore, the value of any  
442 `wsa:ReplyTo` element in the `MakeConnection` message has no effective impact since the WS-

- 443 Addressing [reply endpoint] property that is set by the presence of `wsa:ReplyTo` is not  
444 used.
- 445 • In the absence of any pending message, there will be no message transmitted on the transport  
446 back-channel. E.g. in the HTTP case just an `HTTP 202 Accepted` will be returned without any  
447 SOAP envelope in the HTTP response message.
  - 448 • When there is a message pending, it is sent on the transport back-channel, using the connection  
449 that has been initiated by the `MakeConnection` request.

### 450 3.3 MessagePending

451 When `MakeConnection` is used, and a message is returned on the transport-specific back-channel, the  
452 `MessagePending` header SHOULD be included on the returned message as an indicator whether there  
453 are additional messages waiting to be retrieved using the same selection criteria that was specified in the  
454 `MakeConnection` element.

455 The following exemplar defines the `MessagePending` syntax:

```
456 <wsmc:MessagePending pending="xs:boolean" ...>  
457   ...  
458 </wsmc:MessagePending>
```

459 The following describes the content model of the `MessagePending` header block.

460 `/wsmc:MessagePending`

461 This element indicates whether additional messages are waiting to be retrieved.

462 `/wsmc:MessagePending/@pending`

463 This attribute, when set to "true", indicates that there is at least one message waiting to be  
464 retrieved. When this attribute is set to "false" it indicates there are currently no messages waiting  
465 to be retrieved.

466 `/wsmc:MessagePending/{any}`

467 This is an extensibility mechanism to allow different (extensible) types of information, based on a  
468 schema, to be passed.

469 `/wsmc:MessagePending/@{any}`

470 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to  
471 the element.

472 The absence of the `MessagePending` header has no implication as to whether there are additional  
473 messages waiting to be retrieved.

### 474 3.4 MakeConnection Policy Assertion

475 The `MakeConnection` policy assertion indicates that the `MakeConnection` protocol (operation and the use  
476 of the `MakeConnection` URI template in `EndpointReferences`) is required for messages sent from this  
477 endpoint. This assertion has `Endpoint Policy Subject` [[WS-PolicyAttachment](#)].

478 The normative outline for the `MakeConnection` assertion is:

```
479 <wsmc:MCSupported ...> ... </wsmc:MCSupported>
```

480 The following describes the content model of the `MCSupported` element.

481 `/wsmc:MCSupported`

482 A policy assertion that specifies that the MakeConnection protocol is required for messages sent  
483 from this endpoint.

484 /wsmc:MCSupported/{any}

485 This is an extensibility mechanism to allow different (extensible) types of information, based on a  
486 schema, to be passed.

487 /wsmc:MCSupported/@{any}

488 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to  
489 the element.

---

## 490 4 Faults

491 Entities that generate WS-MakeConnection faults MUST include as the [action] property the default fault  
492 action IRI defined below. The value from the W3C Recommendation is below for informational purposes:

493 <http://docs.oasis-open.org/ws-rx/wsmc/200702/fault>

494 The faults defined in this section are generated if the condition stated in the preamble is met. Fault  
495 handling rules are defined in section 6 of WS-Addressing SOAP Binding.

496 The definitions of faults use the following properties:

497 [Code] The fault code.

498 [Subcode] The fault subcode.

499 [Reason] The English language reason element.

500 [Detail] The detail element(s). If absent, no detail element is defined for the fault. If more than one detail  
501 element is defined for a fault, implementations MUST include the elements in the order that they are  
502 specified.

503 Entities that generate WS-MakeConnection faults MUST set the [Code] property to either "Sender" or  
504 "Receiver". These properties are serialized into text XML as follows:

SOAP Version	Sender	Receiver
SOAP 1.1	S11:Client	S11:Server
SOAP 1.2	S:Sender	S:Receiver

505 The properties above bind to a SOAP 1.2 fault as follows:

```
506 <S:Envelope>  
507 <S:Header>  
508 <wsa:Action>  
509 http://docs.oasis-open.org/ws-rx/wsmc/200702/fault  
510 </wsa:Action>  
511 <!-- Headers elided for brevity. -->  
512 </S:Header>  
513 <S:Body>  
514 <S:Fault>  
515 <S:Code>  
516 <S:Value> [Code] </S:Value>  
517 <S:Subcode>  
518 <S:Value> [Subcode] </S:Value>  
519 </S:Subcode>  
520 </S:Code>  
521 <S:Reason>  
522 <S:Text xml:lang="en"> [Reason] </S:Text>  
523 </S:Reason>  
524 <S:Detail>  
525 [Detail]  
526 ...  
527 </S:Detail>  
528 </S:Fault>  
529 </S:Body>  
530 </S:Envelope>
```

531 The properties bind to a SOAP 1.1 fault as follows when the fault is generated as a result of processing a  
532 MakeConnection message:

```

533 <S11:Envelope>
534 <S11:Body>
535 <S11:Fault>
536 <faultcode> [Subcode] </faultcode>
537 <faultstring> [Reason] </faultstring>
538 </S11:Fault>
539 </S11:Body>
540 </S11:Envelope>

```

## 541 4.1 Unsupported Selection

542 The QName of the unsupported element(s) are included in the detail.

543 Properties:

544 [Code] Receiver

545 [Subcode] wsmc:UnsupportedSelection

546 [Reason] The extension element used in the message selection is not supported by the MakeConnection  
547 receiver

548 [Detail]

```

549 <wsmc:UnsupportedSelection> xs:QName </wsmc:UnsupportedSelection>+

```

Generated by	Condition	Action Upon Generation	Action Upon Receipt
MakeConnection receiver	In response to a MakeConnection message containing a selection criteria in the extensibility section of the message that is not supported	Unspecified.	Unspecified.

## 550 4.2 Missing Selection

551 The MakeConnection element did not contain any selection criteria.

552 Properties:

553 [Code] Receiver

554 [Subcode] wsmc:MissingSelection

555 [Reason] The MakeConnection element did not contain any selection criteria.

556 [Detail]

Generated by	Condition	Action Upon Generation	Action Upon Receipt
--------------	-----------	------------------------	---------------------

Generated by	Condition	Action Upon Generation	Action Upon Receipt
MakeConnection receiver	In response to a MakeConnection message that does not contain any selection criteria	Unspecified.	Unspecified.

---

## 557 5 Security Considerations

558 It is strongly RECOMMENDED that the communication between Web services be secured using the  
559 mechanisms described in WS-Security. In order to properly secure messages, the body and all relevant  
560 headers need to be included in the signature. Specifically, any standard messaging headers, such as  
561 those from WS-Addressing, need to be signed with the body in order to "bind" the two together.

562 Different security mechanisms may be desired depending on the frequency of messages. For example, for  
563 infrequent messages, public key technologies may be adequate for integrity and confidentiality. However,  
564 for high-frequency events, it may be more performant to establish a security context for the events using  
565 the mechanisms described in WS-Trust [[Trust](#)] and WS-SecureConversation [[SecureConversation](#)]. It  
566 should be noted that if a shared secret is used it is RECOMMENDED that derived keys be used to  
567 strengthen the secret as described in WS-SecureConversation.

568 Requests for messages which are not available to anonymous parties are strongly RECOMMENDED to  
569 require usage of WS-Security so that the requestor can be authenticated and authorized to access the  
570 indicated messages. Similarly, integrity and confidentiality SHOULD be used whenever messages have  
571 restricted access.

572 Recipients of messages are RECOMMENDED to validate the signature to authenticate and verify the  
573 integrity of the data. Specifically, recipients SHOULD verify that the sender has the right to "speak" for the  
574 message.

575 The following list summarizes common classes of attacks that apply to this protocol and identifies the  
576 mechanism to prevent/mitigate the attacks:

- 577 • Message alteration - Alteration is prevented by including signatures of the message information  
578 using WS-Security.
- 579 • Message disclosure - Confidentiality is preserved by encrypting sensitive data using WS-Security.
- 580 • Key integrity - Key integrity is maintained by using the strongest algorithms possible (by comparing  
581 secured policies - see WS-Policy and WS-SecurityPolicy [[SecurityPolicy](#)]).
- 582 • Authentication - Authentication is established using the mechanisms described in WS-Security and  
583 WS-Trust. Each message is authenticated using the mechanisms described in WS-Security.
- 584 • Accountability - Accountability is a function of the type of and strength of the key and algorithms  
585 being used. In many cases, a strong symmetric key provides sufficient accountability. However, in  
586 some environments, strong PKI signatures are required.
- 587 • Availability - All reliable messaging services are subject to a variety of availability attacks. Replay  
588 detection is a common attack and it is RECOMMENDED that this be addressed by the  
589 mechanisms described in WS-Security. Other attacks, such as network-level denial of service  
590 attacks are harder to avoid and are outside the scope of this specification. That said, care should  
591 be taken to ensure that minimal state is saved prior to any authenticating sequences.
- 592 • Replay - Messages may be replayed for a variety of reasons. To detect and eliminate this attack,  
593 mechanisms should be used to identify replayed messages such as the timestamp/nonce outlined  
594 in WS-Security. Alternatively, and optionally, other technologies, such as sequencing, can also be  
595 used to prevent replay of application messages.

596 Service endpoints SHOULD scope its searching of messages to those that were processed under the  
597 same security context as the requesting MakeConnection message.

---

## 598 Appendix A. Schema

599 The normative schema that is defined for WS-MakeConnection using [XML-Schema Part1] and [XML-  
600 Schema Part2] is located at:

601 <http://docs.oasis-open.org/ws-rx/wsmc/200702/wsmc-1.0-schema-200702.xsd>

602 The following copy is provided for reference.

```
603 <?xml version="1.0" encoding="UTF-8"?>
604 <!-- Copyright (C) OASIS (R) 1993-2007. All Rights Reserved.
605 OASIS trademark, IPR and other policies apply. -->
606 <xs:schema xmlns:xs="http://www.w3.org/2001/XMLSchema"
607 xmlns:wsa="http://www.w3.org/2005/08/addressing" xmlns:wsmc="http://docs.oasis-
608 open.org/ws-rx/wsmc/200702" targetNamespace="http://docs.oasis-open.org/ws-
609 rx/wsmc/200702" elementFormDefault="qualified"
610 attributeFormDefault="unqualified">
611 <xs:import namespace="http://www.w3.org/2005/08/addressing"
612 schemaLocation="http://www.w3.org/2006/03/addressing/ws-addr.xsd"/>
613 <!-- Protocol Elements -->
614 <xs:complexType name="MessagePendingType">

643 <xs:restriction base="xs:QName"/>
644 </xs:simpleType>
645 </xs:element>
646 </xs:schema>
```

---

## 647 Appendix B. WSDL

648 This WSDL describes the WS-MC protocol from the point of view of the endpoint that receives the  
649 MakeConnection message.

650 Also note that this WSDL is intended to describe the internal structure of the WS-MC protocol, and will not  
651 generally appear in a description of a WS-MC-capable Web service. See section 3.4 Policy for a higher-  
652 level mechanism to indicate that WS-MC is supported.

653 The normative WSDL 1.1 definition for WS-MakeConnection is located at:

654 <http://docs.oasis-open.org/ws-rx/wsmc/200702/wsmc-1.0-wsdl-200702.wsdl>

655 The following non-normative copy is provided for reference.

```
656 <?xml version="1.0" encoding="utf-8"?>
657 <!-- Copyright (C) OASIS(R) 1993-2007. All Rights Reserved.
658 OASIS trademark, IPR and other policies apply. -->
659 <wSDL:definitions xmlns:wSDL="http://schemas.xmlsoap.org/wSDL/"
660 xmlns:xs="http://www.w3.org/2001/XMLSchema"
661 xmlns:wsa="http://www.w3.org/2005/08/addressing"
662 xmlns:wsam="http://www.w3.org/2007/02/addressing/metadata"
663 xmlns:wsmc="http://docs.oasis-open.org/ws-rx/wsmc/200702"
664 xmlns:tns="http://docs.oasis-open.org/ws-rx/wsmc/200702/wSDL"
665 targetNamespace="http://docs.oasis-open.org/ws-rx/wsmc/200702/wSDL">
666
667   <wSDL:types>
668     <xs:schema
669       <xs:import namespace="http://docs.oasis-open.org/ws-rx/wsmc/200702"
670       schemaLocation="http://docs.oasis-open.org/ws-rx/wsmc/200702/wsmc-1.0-schema-
671       200702.xsd"/>
672     </xs:schema>
673   </wSDL:types>
674
675   <wSDL:message name="MakeConnection">
676     <wSDL:part name="makeConnection" element="wsmc:MakeConnection"/>
677   </wSDL:message>
678
679   <wSDL:portType name="MCAbstractPortType">
680     <wSDL:operation name="MakeConnection">
681       <wSDL:input message="tns:MakeConnection" wsam:Action="http://docs.oasis-
682       open.org/ws-rx/wsmc/200702/MakeConnection"/>
683       <!-- As described in the WS-MakeConnection specification, the
684       MakeConnection operation establishes a connection. If a matching
685       message is available then the back-channel of the connection will
686       be used to carry the message. In SOAP terms the returned message
687       is not a response, so there is no WSDL output message. -->
688     </wSDL:operation>
689   </wSDL:portType>
690
691 </wSDL:definitions>
```

---

## 692 Appendix C. Message Examples

### 693 Appendix C.1 Example use of MakeConnection

694 To illustrate how a `MakeConnection` message exchange can be used to deliver messages to an  
695 Endpoint that is not addressable, consider the case of a pub/sub scenario in which the Endpoint to which  
696 notifications are to be delivered (the "event consumer") is not addressable by the notification sending  
697 Endpoint (the "event producer"). In this scenario the event consumer must initiate the connections in order  
698 for the notifications to be delivered. One possible set of message exchanges (using HTTP) that  
699 demonstrate how this can be achieved using `MakeConnection` is shown below.

700 **Step 1** – During a "subscribe" operation, the event consumer's EPR specifies the MC anonymous URI and  
701 the WS-RM Policy Assertion [[WS-RM Policy](#)] to indicate whether or not RM is required:

```
702 <S:Envelope xmlns:S="http://www.w3.org/2003/05/soap-envelope"  
703 xmlns:wsmc="http://docs.oasis-open.org/ws-rx/wsmc/200702"  
704 xmlns:wsrmp="http://docs.oasis-open.org/ws-rx/wsrmp/200702"  
705 xmlns:wsa="http://www.w3.org/2005/08/addressing">  
706   <S:Header>  
707     <wsa:To> http://example.org/subscriptionService </wsa:To>  
708     <wsa:MessageID> http://client456.org/id-a6d8-a7c2eb546813</wsa:MessageID>  
709     <wsa:ReplyTo>  
710       <wsa:To> http://client456.org/response </wsa:To>  
711     </wsa:ReplyTo>  
712   </S:Header>  
713   <S:Body>  
714     <sub:Subscribe xmlns:sub="http://example.org/subscriptionService">  
715       <!-- subscription service specific data -->  
716       <targetEPR>  
717         <wsa:Address>http://docs.oasis-open.org/ws-  
718 rx/wsrmp/200702/anonymous?id=550e8400-e29b-11d4-a716-446655440000</wsa:Address>  
719         <wsa:Metadata>  
720           <wsp:Policy wsu:Id="MyPolicy">  
721             <wsrmp:RMAssertion/>  
722           </wsp:Policy>  
723         </wsa:Metadata>  
724       </targetEPR>  
725     </sub:Subscribe>  
726   </S:Body>  
727 </S:Envelope>
```

728 In this example the `subscribe` and `targetEPR` elements are simply examples of what a subscription  
729 request message might contain. Note: the `wsa:Address` element contains the MC anonymous URI  
730 indicating that the notification producer needs to queue the messages until they are requested using the  
731 `MakeConnection` message exchange. The EPR also contains the WS-RM Policy Assertion indicating the  
732 RM must be used when notifications related to this subscription are sent.

733

734 **Step 2** – Once the subscription is established, the event consumer checks for a pending message:

```
735 <S:Envelope xmlns:S="http://www.w3.org/2003/05/soap-envelope"  
736 xmlns:wsmc="http://docs.oasis-open.org/ws-rx/wsmc/200702"  
737 xmlns:wsa="http://www.w3.org/2005/08/addressing">  
738   <S:Header>  
739     <wsa:Action>http://docs.oasis-open.org/ws-  
740 rx/wsmc/200702/MakeConnection</wsa:Action>  
741     <wsa:To> http://example.org/subscriptionService </wsa:To>
```

```

742     </S:Header>
743     <S:Body>
744         <wsmc:MakeConnection>
745             <wsmc:Address>http://docs.oasis-open.org/ws-
746 rx/wsmc/200702/anonymous?id=550e8400-e29b-11d4-a716-446655440000</wsmc:Address>
747         </wsmc:MakeConnection>
748     </S:Body>
749 </S:Envelope>

```

750 **Step 3** – If there are messages waiting to be delivered then a message will be returned back to the event  
751 consumer. However, because WS-RM is being used to deliver the messages, the first message returned  
752 is a CreateSequence:

```

753 <S:Envelope xmlns:S="http://www.w3.org/2003/05/soap-envelope"
754 xmlns:wsmc="http://docs.oasis-open.org/ws-rx/wsmc/200702"
755 xmlns:wsmr="http://docs.oasis-open.org/ws-rx/wsmr/200702"
756 xmlns:wsa="http://www.w3.org/2005/08/addressing">
757     <S:Header>
758         <wsa:Action>http://docs.oasis-open.org/ws-
759 rx/wsmr/200702/CreateSequence</wsa:Action>
760         <wsa:To>http://docs.oasis-open.org/ws-rx/wsmr/200702/anonymous?id=550e8400-
761 e29b-11d4-a716-446655440000</wsa:To>
762         <wsa:ReplyTo> http://example.org/subscriptionService </wsa:ReplyTo>
763         <wsa:MessageID> http://example.org/id-123-456 </wsa:MessageID>
764         <wsmc:MessagePending pending="true"/>
765     </S:Header>
766     <S:Body>
767         <wsmr:CreateSequence>
768             <wsmr:AcksTo>
769                 <wsa:Address> http://example.org/subscriptionService </wsa:Address>
770             </wsmr:AcksTo>
771         </wsmr:CreateSequence>
772     </S:Body>
773 </S:Envelope>

```

774 Notice from the perspective of how the RM Source on the event producer interacts with the RM Destination  
775 of those messages, nothing new is introduced by the use of the MakeConnection, the use of RM  
776 protocol is the same as the case where the event consumer is addressable. Note the message contains a  
777 wsmc:MessagePending header indicating that additional message are waiting to be delivered.

778

779 **Step 4** – The event consumer will respond with a CreateSequenceResponse message per normal WS-  
780 Addressing rules:

```

781 <S:Envelope xmlns:S="http://www.w3.org/2003/05/soap-envelope"
782 xmlns:wsmr="http://docs.oasis-open.org/ws-rx/wsmr/200702"
783 xmlns:wsa="http://www.w3.org/2005/08/addressing">
784     <S:Header>
785         <wsa:Action>http://docs.oasis-open.org/ws-
786 rx/wsmr/200702/CreateSequenceResponse</wsa:Action>
787         <wsa:To> http://example.org/subscriptionService </wsa:To>
788         <wsa:RelatesTo> http://example.org/id-123-456 </wsa:RelatesTo>
789     </S:Header>
790     <S:Body>
791         <wsmr:CreateSequenceResponse>
792             <wsmr:Identifier> http://example.org/rmid-456 </wsmr:Identifier>
793         </wsmr:CreateSequenceResponse>
794     </S:Body>
795 </S:Envelope>

```

796 Note, this message is carried on an HTTP request directed to the `wsa:ReplyTo` EPR, and the HTTP  
797 response will be an HTTP 202.

798

799 **Step 5** – The event consumer checks for another message pending:

```
800 <S:Envelope xmlns:S="http://www.w3.org/2003/05/soap-envelope"  
801 xmlns:wsmc="http://docs.oasis-open.org/ws-rx/wsmc/200702"  
802 xmlns:wsa="http://www.w3.org/2005/08/addressing">  
803   <S:Header>  
804     <wsa:Action>http://docs.oasis-open.org/ws-  
805 rx/wsmc/200702/MakeConnection</wsa:Action>  
806     <wsa:To> http://example.org/subscriptionService </wsa:To>  
807   </S:Header>  
808   <S:Body>  
809     <wsmc:MakeConnection>  
810       <wsmc:Address>http://docs.oasis-open.org/ws-  
811 rx/wsmc/200702/anonymous?id=550e8400-e29b-11d4-a716-446655440000</wsmc:Address>  
812     </wsmc:MakeConnection>  
813   </S:Body>  
814 </S:Envelope>
```

815 Notice this is the same message as the one sent in step 2.

816

817 **Step 6** – Since there is a message pending for this destination then it is returned on the HTTP response:

```
818 <S:Envelope xmlns:S="http://www.w3.org/2003/05/soap-envelope"  
819 xmlns:wsmc="http://docs.oasis-open.org/ws-rx/wsmc/200702"  
820 xmlns:wsmr="http://docs.oasis-open.org/ws-rx/wsmr/200702"  
821 xmlns:wsa="http://www.w3.org/2005/08/addressing">  
822   <S:Header>  
823     <wsa:Action> http://example.org/eventType1</wsa:Action>  
824     <wsa:To>http://docs.oasis-open.org/ws-rx/wsmr/200702/anonymous?id=550e8400-  
825 e29b-11d4-a716-446655440000</wsa:To>  
826     <wsmr:Sequence>  
827       <wsmr:Identifier> http://example.org/rmid-456 </wsmr:Identifier>  
828     </wsmr:Sequence>  
829     <wsmc:MessagePending pending="true"/>  
830   </S:Header>  
831   <S:Body>  
832     <!-- event specific data -->  
833   </S:Body>  
834 </S:Envelope>
```

835 As noted in step 3, the use of the RM protocol does not change when using `MakeConnection`. The  
836 format of the messages, the order of the messages sent and the timing of when to send it remains the  
837 same.

838

839 **Step 7** – At some later interval, or immediately due to the `MessagePending` header's "pending"  
840 attribute being set to "true", the event consumer will poll again:

```
841 <S:Envelope xmlns:S="http://www.w3.org/2003/05/soap-envelope"  
842 xmlns:wsmc="http://docs.oasis-open.org/ws-rx/wsmc/200702"  
843 xmlns:wsa="http://www.w3.org/2005/08/addressing">  
844   <S:Header>  
845     <wsa:Action> http://docs.oasis-open.org/ws-rx/wsmc/200702/MakeConnection  
846   </wsa:Action>  
847     <wsa:To> http://example.org/subscriptionService </wsa:To>  
848   </S:Header>
```

```
849 <S:Body>
850 <wsmc:MakeConnection>
851 <wsmc:Address>http://docs.oasis-open.org/ws-
852 rx/wsmc/200702/anonymous?id=550e8400-e29b-11d4-a716-446655440000</wsmc:Address>
853 </wsmc:MakeConnection>
854 </S:Body>
855 </S:Envelope>
```

856 Notice this is the same message as the one sent in steps 2 and 5. As in steps 3 and 6, the response to the  
857 `MakeConnection` can be any message destined to the specified Endpoint. This allows the event  
858 producer to send not only application messages (events) but RM protocol messages (e.g.  
859 `CloseSequence`, `TerminateSequence` or even additional `CreateSequence` messages) as needed.

860

861 **Step 8** – If at any point in time there are no messages pending, in response to a `MakeConnection` the  
862 event producer returns an HTTP 202 back to the event consumer. The process then repeats (back to step  
863 7) until the subscription ends.

---

## 864 Appendix D. Acknowledgments

865 The following individuals have provided invaluable input into the initial contribution:

866	Keith Ballinger, Microsoft	880	Efim Hudis, Microsoft
867	Stefan Batres, Microsoft	881	David Ingham, Microsoft
868	Rebecca Bergersen, Iona	882	Gopal Kakivaya, Microsoft
869	Allen Brown, Microsoft	883	Johannes Klein, Microsoft
870	Kyle Brown, IBM	884	Frank Leymann, IBM
871	Michael Conner, IBM	885	Martin Nally, IBM
872	George Copeland, Microsoft	886	Peter Niblett, IBM
873	Francisco Curbera, IBM	887	Jeffrey Schlimmer, Microsoft
874	Paul Fremantle, IBM	888	James Snell, IBM
875	Steve Graham, IBM	889	Keith Stobie, Microsoft
876	Pat Helland, Microsoft	890	Satish Thatte, Microsoft
877	Rick Hill, Microsoft	891	Stephen Todd, IBM
878	Scott Hinkelman, IBM	892	Sanjiva Weerawarana, IBM
879	Tim Holloway, IBM	893	Roger Wolter, Microsoft

894 The following individuals were members of the committee during the development of this specification:

895	Abbie Barbir, Nortel	925	Paul Knight, Nortel
896	Charlton Barreto, Adobe	926	Dan Leshchiner, Tibco
897	Stefan Batres, Microsoft	927	Mark Little, JBoss
898	Hamid Ben Malek, Fujitsu	928	Lily Liu, webMethods
899	Andreas Bjarlestam, Ericsson	929	Matt Lovett, IBM
900	Toufic Boubez, Layer 7	930	Ashok Malhotra, Oracle
901	Doug Bunting, Sun	931	Jonathan Marsh, Microsoft
902	Lloyd Burch, Novell	932	Daniel Millwood, IBM
903	Steve Carter, Novell	933	Jeff Mischkin, Oracle
904	Martin Chapman, Oracle	934	Nilo Mitra, Ericsson
905	Dave Chappell, Sonic	935	Peter Niblett, IBM
906	Paul Cotton, Microsoft	936	Duane Nickull, Adobe
907	Glen Daniels, Sonic	937	Eisaku Nishiyama, Hitachi
908	Doug Davis, IBM	938	Dave Orchard, BEA
909	Blake Dournaee, Intel	939	Chouthri Palanisamy, NEC
910	Jacques Durand, Fujitsu	940	Sanjay Patil, SAP
911	Colleen Evans, Microsoft	941	Gilbert Pilz, BEA
912	Christopher Ferris, IBM	942	Martin Raeppe, SAP
913	Paul Fremantle, WSO2	943	Eric Rajkovic, Oracle
914	Robert Freund, Hitachi	944	Stefan Rossmann, SAP
915	Peter Furniss, Erebor	945	Tom Rutt, Fujitsu
