**Comment provided / Issue raised**

Juan Carlos pointed out that some concepts introduced in DSS-X core 2.0 are not explained sufficiently.

Juan Carlos misses detailed definition of the handling of multiple cardinality in the core document sufficiently

### **TC decision on resolution**

Added several additional sections explaining the new concepts.

Added an explicit statement that cardinality of signature objects is limited to 0..1 for use cases handled by the core document. Profiles may define rules for the processing of extended cardinalities.

**Documented in Issue**
