[Pim van der Eijk](#), Sonnenglanz Consulting

### Related Work:

This specification is related to:

- [OASIS ebXML Messaging Services Version 3.0: Part 1, Core Specification](#)

### Declared XML Namespace:

<http://docs.oasis-open.org/ebxml-msg/ns/ebms/v3.0/profiles/200707>

**Abstract:**

While ebMS 3.0 represents a leap forward in reducing the complexity of Web Services B2B messaging, the specification still contains numerous options and comprehensive alternatives for addressing a variety of scenarios for exchanging data over a Web Services platform. The AS4 profile of the ebMS 3.0 specification has been developed in order to bring continuity to the principles and simplicity that made AS2 successful, while adding better compliance to Web services standards, and features such as message pulling capability and a built-in Receipt mechanism. Using ebMS 3.0 as a base, a subset of functionality is defined along with implementation guidelines adopted based on the “just-enough” design principles and AS2 functional requirements to trim down ebMS 3.0 into a more simplified and AS2-like specification for Web Services B2B messaging. This document defines the AS4 profile as a combination of a conformance profile that concerns an implementation capability, and of a usage profile that concerns how to use this implementation. A couple of variants are defined for the AS4 conformance profile - the AS4 ebHandler profile and the AS4 Light Client profile - that reflect different endpoint capabilities.

**Status:**

This document was last revised or approved by the OASIS ebXML Messaging Services TC on the above date. The level of approval is also listed above. Check the "Latest Version" location noted above for possible later revisions of this document.

Technical Committee members should send comments on this specification to the Technical Committee's email list. Others should send comments to the Technical Committee by using the "[Send A Comment](#)" button on the Technical Committee's web page at <http://www.oasis-open.org/committees/ebxml-msg/>.

For information on whether any patents have been disclosed that may be essential to implementing this specification, and any offers of patent licensing terms, please refer to the Intellectual Property Rights section of the Technical Committee web page at <http://www.oasis-open.org/committees/ebxml-msg/ipr.php>.

**Citation Format:**

When referencing this specification the following citation format should be used:

# 1 Introduction

Historically, the platform for mission-critical business-to-business (B2B) transactions has steadily moved from proprietary value-added networks (VANs) to Internet-based protocols free from the data transfer fees imposed by the VAN operators. This trend has been accelerated by lower costs and product ownership, a maturing of technology, internationalization, widespread interoperability, and marketplace momentum. The exchange of EDI business documents over the Internet has substantially increased along with a growing presence of XML and other document types such as binary and text files.

The Internet messaging services standards that have emerged provide a variety of options for end users to consider when deciding which standard to adopt. These include pre-Internet protocols, the EDIINT series of AS1 [RFC3335] AS2 [RFC4130] and AS3 [RFC4823], simple XML over HTTP, government specific frameworks, ebMS 2.0 [ebMS2], and Web Services variants. As Internet messaging services standards have matured, new standards are emerging that leverage prior B2B messaging services knowledge for applicability to Web Services messaging.

The emergence of the OASIS ebMS 3.0 Standard [ebMS3] represents a leap forward in Web Services B2B messaging services by meeting the challenge of composing many Web Services standards into a single comprehensive specification for defining the secure and reliable exchange of documents using Web Services. The ebMS 3.0 standard composes fundamental Web Services standards SOAP 1.1 [SOAP11], SOAP 1.2 [SOAP12], SOAP with Attachments [SOAPATTACH], WS-Security 1.0 [WSS10], WS-Security 1.1 [WSS11], WS-Reliability 1.1 [WSR11] and WS-ReliableMessaging (currently at version 1.2 [WSRM12]) together with guidance for the packaging of messages and receipts along with definitions of messaging choreographies for orchestrating document exchanges.

Like AS2, ebMS 3.0 brings together many existing standards that govern the packaging, security, and transport of electronic data under the umbrella of a single specification document. While ebMS 3.0 represents a leap forward in reducing the complexity of Web Services B2B messaging, the specification still contains numerous options and comprehensive alternatives for addressing a variety of scenarios for exchanging data over a Web Services platform.

In order to fully take advantage of the AS2 success story, this profile of the ebMS 3.0 specification has been developed. Using ebMS 3.0 as a base, a subset of functionality has been defined along with implementation guidelines adopted based on the “just-enough” design principles and AS2 functional requirements to trim down ebMS 3.0 into a more simplified and AS2-like specification for Web Services B2B messaging. The main benefits of AS4 compared to its previous version are:

- Compatibility with Web services standards.
- Message pulling capability.
- A built-in Receipt mechanism

Profiling ebMS V3 means:

- Defining a subset of ebMS V3 options to be supported by the AS4 handler.
- Deciding which types of message exchanges must be supported, and how these exchanges should be conducted (level of security, binding to HTTP, etc.).
- Deciding of AS4-specific message contents and practices (how to make use of the ebMS message header fields, in an AS4 context).
- Deciding of some operational best practices, for the end-user.

The overall goal of a profile for a standard is to ensure interoperability by:

- Establishing particular usage and practices of the standard within a community of users.

- 44 ● Defining the subset of features in this standard that needs to be supported by an implementation.

45 Two kinds of profiles are usually to be considered when profiling an existing standard:

- 46 1. **Conformance Profiles**. These define the different ways a product can conform to a standard,  
47 based on specific ways to use this standard. A conformance profile is usually associated with a  
48 specific conformance clause. Conformance profiles are of prime interest for product managers  
49 and developers: they define a precise subset of features to be supported.
- 50 2. **Usage Profiles** (also called Deployment Profiles). These define how a standard should be used  
51 by a community of users, in order to ensure best compatibility with business practices and  
52 interoperability. Usage profiles are of prime interest for IT end-users: they define how to  
53 configure the use of a standard (and related product) as well as how to bind this standard to  
54 business applications. A usage profile usually points at required or compatible conformance  
55 profile(s).

56 AS4 is defined as a combination of:

- 57 ● Two AS4 Conformance Profiles (see section 2) that define the subset of ebMS V3 features to be  
58 supported by an AS4 implementation.
- 59 ● An AS4 Usage Profile (section 4) that defines how to use an AS4-compliant implementation in  
60 order to achieve similar functions as specified in AS2.

61 The two AS4 conformance profiles (CP) are defined below:

62 (1) The **AS4 ebHandler CP**. This conformance profile supports both Sending and Receiving roles,  
63 and for each role both message pushing and message pulling.

64 (2) The **AS4 light Client CP**. This conformance profile supports both Sending and Receiving roles,  
65 but only message pushing for Sending and message pulling for Receiving. In other words, it does not  
66 support incoming HTTP requests, and may have no IP address.

67 Compatible existing conformance profiles for ebMS V3 are:

- 68 ● Gateway RM V3 or Gateway RX V3: an MSH product implementing any of these profiles will also  
69 be conforming to the AS4 ebHandler CP (the reverse is not true).

70 NOTE: Full compliance to AS4 actually requires and/or authorizes a message handler to implement a  
71 few additional features beyond the above CPs. These features are described in Section 3.

## 72 1.1 Terminology

73 The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD  
74 NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this specification are to be interpreted as  
75 described in IETF RFC 2119.

## 2 AS4 Conformance Profiles for ebMS V3

150

151 NOTE: AS4 is more than a Conformance Profile, in the sense given in [ebMS3-CP]. It is a combination  
152 of a Conformance Profile and of an Usage Profile, as explained in the introduction section.  
153 Consequently, only this section (section 2) is conforming to the format recommended in [ebMS3-CP] for  
154 describing conformance profiles. The usage profile part (section 4) is following a format based on tables  
155 similar to those found in [IIC-DP].

### 2.1 The AS4 ebHandler Conformance Profile

156

157 The AS4 ebHandler is identified by the URI:

158 <http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/ns/cprofiles/200809/as4ebhandler>

#### 2.1.1 Features Set

159

160 The AS4 CP is defined as follows, using the table template and terminology provided in Appendix F  
161 (“Conformance”) of the core ebXML Messaging Services V3.0 specification [ebMS3].

<b>Conformance Profile:</b> <b>AS4 ebHandler</b>	<b>Profile summary:</b> <“Sending+Receiving” / “AS4 eb Handler” / Level 1 / HTTP1.1 + SOAP 1.2 + WSS1.1 >
<b>Functional Aspects</b>	<b>Profile Feature Set</b>
ebMS MEP	<p>Both Sender and Receiver MUST support all ebMS simple MEPs:</p> <ul style="list-style-type: none"><li>● One-way / Push</li><li>● One-way / Pull</li></ul> <p>Regardless of which MEP is used, the sending of an eb:Receipt message MUST be supported:</p> <ul style="list-style-type: none"><li>● For the One-way / Push, both “response” and “callback” reply patterns MUST be supported.</li><li>● For the One-way / Pull, the “callback” pattern is the only viable option, and the User message sender MUST be ready to accept an eb:Receipt either piggybacked on (or bundled with) a PullRequest, or piggybacked on another User Message, or sent separately. In all MEPs, the User message receiver MUST be able to send an eb:Receipt as a separate message (i.e. not piggybacked on a PullRequest message or on another User message). An MSH conforming to this profile is therefore NOT required to bundle an eb:Receipt with any other ebMS header or message body.</li></ul> <p>Use of the ebbpsig:NonRepudiationInformation element (as defined in [ebBP-SIG]) MUST be supported as content for the eb:Receipt message, i.e. when conforming to this profile a Sending MSH must be able to create a Receipt with such a content, and a Receiving MSH must be able to process it.</p>
Reliability	Reception Awareness, defined as the ability for a Sending ebHandler to notify its

	<p>application (message Producer) of lack of reception of an eb:Receipt related to a sent message, MUST be supported. This implies support for:</p> <ul style="list-style-type: none"> <li>● Correlating eb:Receipts with previously sent User messages, based on the ebMS message ID</li> <li>● Detection of a missing eb:Receipt for a sent message</li> <li>● Ability to report an error to the message Producer in case no eb:Receipt has been received for a sent message.</li> </ul> <p>The semantics of sending back an eb:Receipt message is: a well-formed ebMS user message has been received and the MSH is taking responsibility for its processing, (no additional application-level delivery semantics, and no payload validation semantics).</p> <p>No support for a WS reliable messaging specification is required although that is an option.</p>
Security	<p>The following security features MUST be supported:</p> <ul style="list-style-type: none"> <li>● Support for username / password token, digital signatures and encryption.</li> <li>● Support for content-only transforms.</li> <li>● Support for security of attachments.</li> <li>● Support for message authorization at P-Mode level (see 7.10 in [ebMS3]) Authorization of the Pull signal - for a particular MPC - must be supported at minimum.</li> </ul> <p>Two authorization options MUST be supported by an MSH in the Receiving role, and at least one of them in the Sending role:</p> <ul style="list-style-type: none"> <li>● <b>Authorization Option 1:</b> Use of the WSS security header targeted to the “ebms” actor, as specified in section 7.10 of ebMS V3, with the wsse:UsernameToken profile. This header may either come in addition to the regular wsse security header (XMLDsig for authentication), or may be the sole wsse header, if a transport-level secure protocol such as SSL or TLS is used.</li> <li>● <b>Authorization Option 2:</b> Use of a regular wsse security header (XMLDsig for authentication, use of X509), and no additional wsse security header targeted to “ebms”. In that case, the MSH must be able to use the credential present in this security header for Pull authorization, i.e. to associate these with a specific MPC.</li> </ul> <p>NOTE on XMLDsig: XMLDsig allows arbitrary XSLT Transformations when constructing the plaintext over which a signature or reference is created. Conforming applications that allow use of XSLT transformations when verifying either signatures or references are encouraged to maintain lists of “safe” transformations for a given partner, service, action and role combination. Static analysis of XSLT expressions with a human user audit is encouraged for trusting a given expression as “safe” .</p>
Error generation and	The following error processing capabilities MUST be supported:

reporting	<ul style="list-style-type: none"> <li>● Capability of the Receiving MSH to report errors from message processing, either as ebMS error messages or as Faults to the Sending MSH. The following modes of reporting to Sending MSH are supported: <ul style="list-style-type: none"> <li>● Sending error as a separate request (ErrorHandling.Report.ReceiverErrorsTo=&lt;URL of Sending MSH&gt;)</li> <li>● Sending error on the back channel of underlying protocol (ErrorHandling.Report.AsResponse="true").</li> </ul> </li> <li>● Capability to report to a third-party address (ErrorHandling.Report.ReceiverErrorsTo=&lt;other address&gt;).</li> <li>● Capability of Sending MSH to report generated errors as notifications to the message producer (support for Report.ProcessErrorNotifyProducer="true")( e.g. delivery failure).</li> <li>● Generated errors: All specified errors in [ebMS3] are to be generated when applicable, except for EBMS:0010: On Receiving MSH, no requirement to generate error EBMS:0010 for discrepancies between message header and the following P-Mode features: P-Mode.reliability and P-Mode.security, but requirement to generate such error for other discrepancies</li> </ul>
Message Partition Channels	Message partition channels (MPC) MUST be supported in addition to the default channel, so that selective pulling by a partner MSH is possible. This means AS4 handlers MUST be able to use the @mpc attribute and to process it as expected.
Message packaging	<p>The following features MUST be supported both on sending and receiving sides:</p> <ul style="list-style-type: none"> <li>● Support for attachments.</li> <li>● Support for MessageProperties.</li> <li>● Support for processing messages that contain both a signal message unit (eb:SignalMessage) and a user message unit (eb:UserMessage).</li> </ul>
Interoperability Parameters	<p>The following interoperability parameters values MUST be supported for this conformance profile:</p> <ul style="list-style-type: none"> <li>● <b>Transport:</b> HTTP 1.1</li> <li>● <b>SOAP version:</b> 1.2</li> <li>● <b>Reliability Specification:</b> none.</li> <li>● <b>Security Specification:</b> WSS 1.1.</li> </ul>

## 162 2.1.2 WS-I Conformance Profiles

163 The Web-Services Interoperability consortium has defined guidelines for interoperability of SOAP  
164 messaging implementations. In order to ensure maximal interoperability across different SOAP stacks,

165 MIME and HTTP implementations, compliance with the following WS-I profiles is REQUIRED whenever  
166 related features are used:

- 167 ● Basic Security Profile (BSP) 1.1 [WSIBSP11].
- 168 ● Attachment Profile (AP) 1.0 [WSIAP10] with regard to the use of MIME and SOAP with  
169 Attachments.

170 Notes:

- 171 ● Compliance with AP1.0 would normally require compliance with BP1.1, which in turn requires the  
172 absence of a SOAP Envelope in the HTTP response of a One-Way (R2714). However, recent  
173 BP versions such as BP1.2 [WSIBP12] and BP2.0 [WSIBP20] override this requirement.  
174 Consequently, the AS4 ebHandler conformance profile does not require conformance to these  
175 deprecated requirements inherited from BP1.1 (R2714, R1143) regarding the use of HTTP.
- 176 ● The above WS-I profiles must be complied with within the scope of features exhibited by the  
177 AS4 ebHandler conformance profile. For example, since only SOAP 1.2 is required by AS4  
178 ebHandler, the requirements from BSP 1.1 that depend on SOAP 1.1 would not apply. Similarly,  
179 none of the requirements for DESCRIPTION (WSDL) or REGDATA (UDDI) apply here, as these  
180 are not used.

181 This conformance profile also requires conformance to the following WS-I profiles :

- 182 ● Basic Profile 2.0 (BP2.0) [WSIBP20].

## 183 2.1.3 Processing Mode Parameters

184 This section contains a summary of P-Mode parameters relevant to AS4 features for this conformance  
185 profile. An AS4 handler MUST support and understand those that are mentioned as "required". For each  
186 parameter, either:

- 187 ● Full support is required: an implementation is supposed to support the possible options for this  
188 parameter.
- 189 ● Support for a subset of values is required.
- 190 ● No support is required: an implementation is not required to support the features controlled by  
191 this parameter, and therefore not required to understand this parameter.

### 192 2.1.3.1 General PMode parameters

- 193 ● **(PMode.ID:** support not required)
- 194 ● **(PMode.Agreement:** support not required)
- 195 ● **PMode.MEP:** support required for: <http://www.oasis-open.org/committees/ebxml-msg/one-way>
- 196 ● **PMode.MEPbinding:** support required for: [http://www.oasis-open.org/committees/ebxml-](http://www.oasis-open.org/committees/ebxml-msg/push)  
197 [msg/push](http://www.oasis-open.org/committees/ebxml-msg/pull) and <http://www.oasis-open.org/committees/ebxml-msg/pull>.
- 198 ● **PMode.Initiator.Party:** support required.
- 199 ● **PMode.Initiator.Role:** support required.
- 200 ● **PMode.Initiator.Authorization.username** and **PMode.Initiator.Authorization.password:**  
201 support required for: wsse:UsernameToken.

- 202 ● **PMode.Responder.Party**: support required.
- 203 ● **PMode.Responder.Role**: support required.
- 204 ● **PMode.Responder.Authorization.username** and
- 205 **PMode.Responder.Authorization.password**: support required for: wsse:UsernameToken.

### 206 **2.1.3.2 PMode[1].Protocol**

- 207 ● **PMode[1].Protocol.Address**: support required for “http” scheme.
- 208 ● **PMode[1].Protocol.SOAPVersion**: support required for SOAP 1.2.

### 209 **2.1.3.3 PMode[1].BusinessInfo**

- 210 ● **PMode[1].BusinessInfo.Service**: support required.
- 211 ● **PMode[1].BusinessInfo.Action**: support required.
- 212 ● **PMode[1].BusinessInfo.Properties[]**: support required.
- 213 ● **(PMode[1].BusinessInfo.PayloadProfile[]**: support not required)
- 214 ● **(PMode[1].BusinessInfo.PayloadProfile.maxSize**: support not required)

### 215 **2.1.3.4 PMode[1].ErrorHandling**

- 216 ● **(PMode[1].ErrorHandling.Report.SenderErrorsTo**: support not required)
- 217 ● **PMode[1].ErrorHandling.Report.ReceiverErrorsTo**: support required (for address of the MSH
- 218 sending the message in error or for third-party).
- 219 ● **PMode[1].ErrorHandling.Report.AsResponse**: support required (true/false).
- 220 ● **(PMode[1].ErrorHandling.Report.ProcessErrorNotifyConsumer** support not required)
- 221 ● **PMode[1].ErrorHandling.Report.ProcessErrorNotifyProducer**: support required (true/false)
- 222 ● **PMode[1].ErrorHandling.Report.DeliveryFailuresNotifyProducer**: support required
- 223 (true/false)

### 224 **2.1.3.5 PMode[1].Reliability**

225 Support not required.

### 226 **2.1.3.6 PMode[1].Security**

- 227 ● **PMode[1].Security.WSSVersion**: support required for: 1.1
- 228 ● **PMode[1].Security.X509.Sign**: support required.
- 229 ● **PMode[1].Security.X509.Signature.Certificate**: support required.

- 230 ● **PMode[1].Security.X509.Signature.HashFunction:** support required.
- 231 ● **PMode[1].Security.X509.Signature.Algorithm:** support required.
- 232 ● **PMode[1].Security.X509.Encryption.Encrypt:** support required.
- 233 ● **PMode[1].Security.X509.Encryption.Certificate:** support required.
- 234 ● **PMode[1].Security.X509.Encryption.Algorithm:** support required.
- 235 ● **(PMode[1].Security.X509.Encryption.MinimumStrength:** support not required)
- 236 ● **PMode[1].Security.UsernameToken.username:** support required.
- 237 ● **PMode[1].Security.UsernameToken.password:** support required.
- 238 ● **PMode[1].Security.UsernameToken.Digest:** support required (true/false)
- 239 ● **(PMode[1].Security.UsernameToken.Nonce:** support not required)
- 240 ● **PMode[1].Security.UsernameToken.Created:** support required.
- 241 ● **PMode[1].Security.PModeAuthorize:** support required (true/false)
- 242 ● **PMode[1].Security.SendReceipt:** support required (true/false)
- 243 ● **Pmode[1].Security.SendReceipt.ReplyPattern:** support required (both “response” and
- 244 “callback”))

## 245 2.2 The AS4 Light Client Conformance Profile

246 The AS4 light Client is identified by the URI:

247 <http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/ns/cprofiles/200809/as4lightclient>

### 248 2.2.1 Feature Set

<b>Conformance Profile:</b>  <b>AS4-LightClient</b>	<b>Profile summary:</b> <“Sending+Receiving” / “lighthandler-rm” / Level 1 / HTTP1.1 + SOAP 1.1>
<b>Functional Aspects</b>	<b>Profile Feature Set</b>
ebMS MEP	The following MEPs <b>MUST</b> be supported: <ul style="list-style-type: none"> <li>● One-way / Push (as initiator).</li> <li>● One-way / Pull (as initiator).</li> </ul> Regardless of which MEP is used, the sending of an eb:Receipt message <b>MUST</b> be supported: <ul style="list-style-type: none"> <li>● For the One-way / Push, the “response” reply pattern <b>MUST</b> be supported.</li> <li>● For the One-way / Pull, the “callback” pattern is the only viable option, and the User message sender <b>MUST</b> be ready to accept an eb:Receipt either piggybacked on a PullRequest, or sent separately. The User message</li> </ul>

	<p>receiver MUST be able to send an eb:Receipt separately from the PullRequest.</p> <p>In all MEPs, the User message receiver MUST be able to send an eb:Receipt as a separate message (i.e. not piggybacked on a PullRequest message or on another User message). An MSH conforming to this profile is therefore NOT REQUIRED to bundle an eb:Receipt with any other ebMS header or message body. However, when receiving a Receipt, an MSH conforming to this profile MUST be able to process an eb:Receipt bundled with an other ebMS message header or body.</p> <p>Use of the ebbpsig:NonRepudiationInformation element (as defined in [ebBP-SIG]) MUST be supported as content for the eb:Receipt message, i.e. when conforming to this profile a Sending MSH must be able to create a Receipt with such a content, and a Receiving MSH must be able to process it.</p>
Reliability	<p>Reception Awareness, defined as the ability for a Sending light Client to notify its application (message Producer) of lack of reception of an eb:Receipt related to a sent message, MUST be supported. This implies support for:</p> <ul style="list-style-type: none"> <li>● Correlating eb:Receipts with previously sent User messages, based on the ebMS message ID.</li> <li>● Detection of a missing eb:Receipt for a sent message.</li> <li>● Ability to report an error to the message Producer in case no eb:Receipt has been received for a sent message.</li> </ul> <p>The semantics of sending back an eb:Receipt message is: a well-formed ebMS user message has been received and the MSH is taking responsibility for its processing, (no additional application-level delivery semantics, and no payload validation semantics).</p> <p>Support for a WS reliable messaging specification is NOT REQUIRED although that is an option.</p>
Security	<p>Both authorization options for message pulling (authorizing a PullRequest for a particular MPC) described in the ebHandler conformance profile MUST be supported:</p> <ol style="list-style-type: none"> <li>1. Support for username / password token: minimal support for wss:UsernameToken profile in the Pull signal - for authorizing a particular MPC. Support for adding a WSS security header targeted to the “ebms” actor, as specified in section 7.10 of ebMS V3, with the wsse:UsernameToken profile. The use of transport-level secure protocol such as SSL or TLS is recommended.</li> <li>2. Support for a regular wsse security header (XMLDsig for authentication, use of X509), and no additional wsse security header targeted to “ebms”.</li> </ol>
Error generation and reporting	<p>Error notification to the local message producer MUST be supported (e.g. reported failure to deliver pushed messages).</p> <p>The reporting of message processing errors for pulled messages to the remote party MUST be supported via Error messages (such an error may be bundled with another pushed message or a Pull signal.).</p>

Message Partition Channels	Sending on the default message partition channel is sufficient ( support for additional message partitions is NOT REQUIRED.)
Message packaging	Support for attachments is NOT REQUIRED – i.e. the message payload will use the SOAP body. Support for MessageProperties is NOT REQUIRED.
Interoperability Parameters	The following interoperability parameters values MUST be supported for this conformance profile: <ul style="list-style-type: none"> <li>● <b>Transport:</b> HTTP 1.1</li> <li>● <b>SOAP version:</b> 1.2</li> <li>● <b>Reliability Specification:</b> none.</li> <li>● <b>Security Specification:</b> WSS 1.1.</li> </ul>

## 249 2.2.2 WS-I Conformance Requirements

250 This conformance profile will require compliance with the following WS-I profile :

- 251 ● Basic Profile 2.0 (BP2.0) [WSIBP20].

252 Note: the above WS-I profile MUST be complied with within the scope of features exhibited by the AS4  
253 Light Client ebMS conformance profile.

## 254 2.2.3 Processing Mode Parameters

255 This section contains a summary of P-Mode parameters relevant to AS4 features for this conformance  
256 profile. An AS4 Light client MUST support and understand those that are mentioned as "required". For  
257 each parameter, either:

- 258 ● Full support is required: an implementation is supposed to support the possible options for this  
259 parameter.
- 260 ● Support for a subset of values is required.
- 261 ● No support is required: an implementation is not required to support the features controlled by  
262 this parameter, and therefore not required to understand this parameter.

### 263 2.2.3.1 General PMode parameters

- 264 ● **(PMode.ID:** support not required)
- 265 ● **(PMode.Agreement:** support not required)
- 266 ● **PMode.MEP:** support required for: <http://www.oasis-open.org/committees/ebxml-msg/one-way>
- 267 ● **PMode.MEPbinding:** support required for: [http://www.oasis-open.org/committees/ebxml-](http://www.oasis-open.org/committees/ebxml-msg/push)  
268 [msg/push](http://www.oasis-open.org/committees/ebxml-msg/pull) and <http://www.oasis-open.org/committees/ebxml-msg/pull>.

- 269 ● **PMode.Initiator.Party**: support required.
- 270 ● **PMode.Initiator.Role**: support required.
- 271 ● **PMode.Initiator.Authorization.username** and **PMode.Initiator.Authorization.password**:  
272 support required for: wsse:UsernameToken.
- 273 ● **PMode.Responder.Party**: support required.
- 274 ● **PMode.Responder.Role**: support required.
- 275 ● **PMode.Responder.Authorization.username** and  
276 **PMode.Responder.Authorization.password**: support not required.

### 277 2.2.3.2 PMode[1].Protocol

- 278 ● **PMode[1].Protocol.Address**: support required for “http” scheme.
- 279 ● **PMode[1].Protocol.SOAPVersion**: support required for SOAP 1.2.

### 280 2.2.3.3 PMode[1].BusinessInfo

- 281 ● **PMode[1].BusinessInfo.Service**: support required.
- 282 ● **PMode[1].BusinessInfo.Action**: support required.
- 283 ● **PMode[1].BusinessInfo.Properties[]**: support required.
- 284 ● (**PMode[1].BusinessInfo.PayloadProfile[]**: support not required)
- 285 ● (**PMode[1].BusinessInfo.PayloadProfile.maxSize**: support not required)

### 286 2.2.3.4 PMode[1].ErrorHandling

- 287 ● (**PMode[1].ErrorHandling.Report.SenderErrorsTo**: support not required)
- 288 ● **PMode[1].ErrorHandling.Report.AsResponse**: support required (true/false).
- 289 ● (**PMode[1].ErrorHandling.Report.ProcessErrorNotifyConsumer** support not required)
- 290 ● **PMode[1].ErrorHandling.Report.ProcessErrorNotifyProducer**: support required (true/false)
- 291 ● **PMode[1].ErrorHandling.Report.DeliveryFailuresNotifyProducer**: support required  
292 (true/false)

### 293 2.2.3.5 Pmode[1].Reliability

294 Support not required.

### 295 2.2.3.6 PMode[1].Security

- 296 ● **PMode[1].Security.WSSVersion**: support required for: 1.1

- 297 ● **PMode[1].Security.X509.Sign:** support required.
- 298 ● **PMode[1].Security.X509.Signature.Certificate:** support required.
- 299 ● **PMode[1].Security.X509.Signature.HashFunction:** support required.
- 300 ● **PMode[1].Security.X509.Signature.Algorithm:** support required.
- 301 ● **PMode[1].Security.X509.Encryption.Encrypt:** support not required.
- 302 ● **PMode[1].Security.X509.Encryption.Certificate:** support not required.
- 303 ● **PMode[1].Security.X509.Encryption.Algorithm:** support not required.
- 304 ● **(PMode[1].Security.X509.Encryption.MinimumStrength:** support not required)
- 305 ● **PMode[1].Security.UsernameToken.username:** support required.
- 306 ● **PMode[1].Security.UsernameToken.password:** support required.
- 307 ● **PMode[1].Security.UsernameToken.Digest:** support required (true/false)
- 308 ● **(PMode[1].Security.UsernameToken.Nonce:** support not required)
- 309 ● **PMode[1].Security.UsernameToken.Created:** support required.
- 310 ● **PMode[1].Security.PModeAuthorize:** support required (true/false)
- 311 ● **PMode[1].Security.SendReceipt:** support required (true/false)
- 312 ● **Pmode[1].Security.SendReceipt.ReplyPattern:** support required (for “response”))

## 313 **2.3 Conformance Profiles Compatibility**

314 The AS4 profile is compatible with the following ebMS V3 conformance profiles, defined in [ebMS3-CP]:

- 315 ● Gateway RM V2/3
- 316 ● Gateway RM V3
- 317 ● Gateway RX V2/3
- 318 ● Gateway RX V3

319 AS4 may be deployed on any MSH that conforms to one of the above conformance profiles.

320 NOTE: AS4 may also be deployed on an MSH that supports B2B messaging protocols other than ebMS,  
321 such as AS2 [RFC4130]. Such an MSH could be used by organizations that use AS2 for some business  
322 partners, or for some types of documents, and AS4 for others.

## 3 AS4 Additional Features

323

324 This section defines features that were not specified in ebMS V3 and therefore out of scope for the  
325 previous conformance profiles (ebHandler CP and Light Client CP). These features should be considered  
326 as additional capabilities that are either required by or made optional to AS4 implementations as  
327 indicated below.

328 The profiling tables below can be used for adding user-defined profiling requirements to be adopted  
329 within a business community. Whenever the feature – or its profiling - is mandatory, the right-side  
330 column (Profile Requirement) will specify it.

### 3.1 Compression

331

332 Application payloads that are built in conformance with the SOAP Messages with Attachments  
333 [SOAPATTACH] specification may be compressed. Support for compression MUST then be provided by  
334 AS4 implementations. Compression of the SOAP envelope and/or payload containers within the SOAP  
335 Body of an ebMS Message is not supported.

336

337 To compress the payload(s) of a message built in conformance with the SOAP Messages with  
338 Attachments [SOAPATTACH] specification, the GZIP [RFC1925] compression algorithm MUST be used.  
339 Compression MUST be applied before payloads are attached to the SOAP Message.

340 The eb:PartInfo element in the message header that relates to the compressed message part, MUST  
341 have an eb:Property element with @name =“Compressed”:

```
342 <eb:Property name="Compressed"/>
```

343 The content type of the compressed attachment MUST be "application/gzip".

344 These are indicators to the receiver that compression has been used on this part.

345 When compression, signature and encryption are required of the MSH, the message MUST be  
346 compressed prior to being signed and/or encrypted.

347 Packaging requirements:

- 348 ● A eb:PartInfo/eb:PartProperties/eb:Property/@name="MimeType" value is RECOMMENDED to  
349 identify the mimetype of the payload before compression was applied.
- 350 ● A eb:PartInfo/eb:PartProperties/eb:Property/@name="CharacterSet" value is RECOMMENDED  
351 to identify the character set of the payload before compression was applied.

353 Example:

```
354 <eb:PartInfo href="cid:attachment1234@example.com" >  
355   <eb:PartProperties>  
356     <eb:Property name="MimeType">application/xml</eb:Property>  
357     <eb:Property name="CharacterSet">utf-8</eb:Property>  
358     <eb:Property name="Compressed"/>  
359   </eb:PartProperties>  
360 </eb:PartInfo>
```

361

362 An additional PMode parameter is defined, that MUST be supported:

- 363 ● **PMode[1].PayloadService.Compression:** {true / false}

364 **True:** some attached payload(s) may be compressed over this MEP segment.

365 **False** (default): no compression is used over this MEP segment.

366 NOTE: the requirement for Compression feature applies to both conformance profiles (AS4 ebHandler  
367 and AS4 light Client).

### 368 **3.2 Reception Awareness features and Duplicate Detection**

369 These capabilities are making use of the eb:Receipt as the sole type of acknowledgement. Duplicate  
370 detection only relies on the eb:MessageInfo/eb:MessageId.

Features	Profile requirements
Reception awareness error handling (REQUIRED support)	Ability for the MSH expecting an eb:Receipt to generate an error in case no eb:Receipt has been received for a sent message. It is RECOMMENDED that this error be a new error: Code = EBMS:0301, Short Description = MissingReceipt, Severity = Failure, Category = Communication.  Ability for the MSH expecting an eb:Receipt to report a MissingReceipt error to the message Producer
Message Retry (OPTIONAL support)	Ability for a User message sender that has not received an expected eb:Receipt to resend the User message. If doing so, the eb:MessageInfo/eb:MessageId element of the resend message and of the original User message MUST be same. When resending a message for which non-repudiation of receipt is required, the sender MUST ensure that the hash values for the digests to be included in the Receipt (i.e. the content of MessagePartNRInformation elements), do not vary from the original message to the retry(ies), so that non-repudiation of receipt can be asserted based on the original message and the receipt of any of its retries.
Duplicate Detection ( REQUIRED support)	Ability for the MSH receiving a User message to detect and/or eliminate duplicates based on eb:MessageInfo/eb:MessageId. If duplicates are just detected (not eliminated) then at the very least it is REQUIRED that the Receiving MSH notifies its application (message Consumer) of the duplicates. For examples, these could be logged.  Related quantitative parameters (time window for the detection, or maximum message log size) are left for implementers to decide.
Others	

371 NOTE: these requirements apply to both conformance profiles (AS4 ebHandler and AS4 light Client)

372 The following additional PMode parameters are defined and MUST be supported:

- 373 • **PMode[1].ReceptionAwareness:** (true / false)
- 374 • **PMode[1].ReceptionAwareness.Replay:** (true / false)

- 375 • **PMode[1].ReceptionAwareness.Replay.Parameters:**. (contains a composite string specifying:  
376 (a) maximum number of retries or some timeout, (b) frequency of retries or some retry rule). The  
377 string contains a sequence of parameters of the form: name=value, separated by either comas  
378 or ';'. Example: "maxretries=10,period=3000", in case the retry period is 3000 ms.
- 379 • **PMode[1].ReceptionAwareness.DuplicateDetection:** (true / false)
- 380 • **PMode[1].ReceptionAwareness.DetectDuplicates.Parameters:** (contains a composite string  
381 specifying either (a) maximum size of message log over which duplicate detection is supported,  
382 (b) maximum time window over which duplicate detection is supported). The string contains a  
383 sequence of parameters of the form: name=value, separated by either comas or ';'. Example:  
384 "maxsize=10Mb,checkwindow=7D", in case the duplicate check window is guaranteed of 7 days  
385 minimum.

### 386 3.3 Alternative Pull Authorization

387 In addition to the two authorization options described in the AS4 Conformance Profile (section 2.1.1), an  
388 implementation MAY optionally decide to support a third authorization technique, based on transient  
389 security (SSL or TLS).

390 SSL/TLS can provide certificate-based client authentication. Once the identity of the Pulling client is  
391 established, the Security module may pass this identity to the ebms module, which can then associate it  
392 with the right authorization entry, e.g. the set of MPCs this client is allowed to pull from.

393 This third authorization option – compatible with AS4 although not specified in ebMS Core V3 - relies on  
394 the ability of the ebms module to obtain the client credentials. This capability represents an (optional)  
395 new feature. With this option, there may be no need for any WS-Security headers in the Pull request at  
396 all.

### 397 3.4 Semantics of Receipt in AS4

398 The notion of Receipt in ebMS V3 is not associated with any particular semantics, such as delivery  
399 assurance. However, when combined with security (signing), it is intended to support Non Repudiation of  
400 Receipt (NRR).

401 In AS4, the eb:Receipt message serves both as a business receipt (its content is profiled in Section 2),  
402 and as a reception indicator, being a key element of the reception awareness feature. No particular  
403 delivery semantics can be assumed however: the sending of an eb:Receipt only means the following,  
404 from a message processing viewpoint:

- 405 (a) The related ebMS user message has been received and is well-formed.
- 406 (b) The Receiving MSH is taking responsibility for processing this user message. However, no  
407 guarantee can be made that this user message will be ultimately delivered to its Consumer  
408 application (this responsibility lays however now on the Receiver side).

409 The meaning of NOT getting an expected Receipt, for the sender of a related user message, is one of  
410 the following:

- 411 1. The user message was lost and never received by the Receiving MSH.
- 412 2. The user message was received, but the eb:Receipt was never generated, e.g. due to a faulty  
413 configuration (PMode).
- 414 3. The user message was received, the eb:Receipt was sent back but was lost on the way.

415 See section 4.1.8 for AS4 usage rules about Receipts.

## 4 AS4 Usage Profile of ebMS 3.0

416

417 While the previous sections were describing messaging handler requirements for AS4 compliance (i.e.  
418 mostly intended for product developers), this section is about configuration and usage options.

419 This section is split in two major subsections:

- 420 • **AS4 Usage Rules:** this section is stating the rules for using messaging features in an AS4-  
421 compliant way.
- 422 • **AS4 Usage Agreements:** this section is reminding the users of what are the main options left  
423 open by the AS4 profiles, that they have to agree on in order to interoperate.

424 Both sections are about features that are under responsibility of the user when using an AS4-compliant  
425 product.

### 4.1 AS4 Usage Rules

426

#### 4.1.1 Core Components / Modules to be Used

427

428 This table summarizes which functional modules in the ebMS V3 specification are required to be  
429 implemented by the AS4 profile, and whether or not these modules are actually profiled for AS4.

430

ebMS V3 Component Name and Reference	Profiling status
Messaging Model (section 2)	Usage: <b>Required</b> Profiled: <b>Yes</b> Notes: This Profile only supports the One-Way/Push MEP (Sync and Async) and the One-Way/Pull MEP
Message Pulling and Partitioning (section 3)	Usage: <b>Required</b> Profiled: <b>No</b> Notes: The profiling of QoS associated with Pulling is defined in another module. The MPC and pulling feature itself are not profiled.
Processing Modes (section 4)	Usage: <b>Required</b> Profiled: <b>Yes</b>
Message Packaging (section 5)	Usage: <b>Required</b> Profiled: <b>Yes</b> Notes: Default business process defines acceptable defaults for Role, Service and Action. Bundling options for message headers (piggybacking) are restricted.

<b>ebMS V3 Component Name and Reference</b>	<b>Profiling status</b>
Error Handling (section 6)	Usage: <b>Required</b> Profiled: <b>Yes</b> Notes: Addition of some new Error Codes regarding Reception Awareness
Security Module (section 7)	Usage: <b>Required</b> Profiled: <b>Yes</b> Notes: Guidance regarding which part(s) of the message may be encrypted and included in the signature. Further guidance on how to secure the PullRequest Signal and the preventing of replay attacks..
Reliable Messaging Module (section 8)	Usage: <b>Not Required</b> Profiled: <b>No</b> Notes: This profile does not require the use of the Reliable Messaging Module using either WS-ReliableMessaging or WS-Reliability. It relies instead on eb:Receipts for supporting a light reliability feature called "Reception Awareness".

431 **4.1.2 Bundling rules**

Scope of the Profile Feature	Defines bundling (or "piggybacking") rules of ebMS MEPs, including Receipts.
Specification Feature	
Specification Reference	ebMS v3.0, Section 2.2
Profiling Rule (a)	This profile supports the One-Way/Push MEP. Both synchronous and asynchronous transport channels for the response (eb:Receipt) are allowed by this profile. When sending a Receipt for this MEP, a Receiving MSH conforming to this profile SHOULD NOT bundled the Receipt with any other ebMS message header or body.
Profiling Rule (b)	This profile supports the One-Way/Pull MEP. When sending a Receipt for this MEP, a Receiving MSH conforming to this profile SHOULD NOT bundled the Receipt with any other ebMS message header (including a PullRequest signal) or message body,
Test References	

432

433 **4.1.3 Security Element**

Specification Feature	Use of WSS features
Specification Reference	ebMS v3.0, Section 7.1
Profiling Rule (a)	When using digital signatures or encryption, an AS4 MSH implementation is REQUIRED to use the Web Services Security X.509 Certificate Token Profile [WSS11-X509].
Alignment	<ul style="list-style-type: none"> <li>• <i>Web Services Security: SOAP Message Security 1.1, 2005.</i> [WSS11]</li> <li>• <i>Web Services Security X.509 Certificate Token Profile 1.1, 2006</i> [WSS11-X509].</li> </ul>
Test References	
Notes	

434 **4.1.4 Signing Messages**

Specification Feature	Digital Signatures for SOAP message headers and body
Specification Reference	ebMS v3.0, Section 7.2
Profiling Rule (a)	AS4 MSH implementations are REQUIRED to use Detached Signatures as defined by the XML Signature Specification [XMLDSIG] when signing AS4 user or signal messages. Enveloped Signatures as defined by [XMLDSIG] are not supported by or authorized in this profile.
Profiling Rule (b)	AS4 MSH implementations are REQUIRED to include the entire eb:Messaging SOAP header block and the (possibly empty) SOAP Body in the signature.
Alignment	
Test References	

435 **4.1.5 Signing SOAP with Attachments Messages**

Specification Feature	Signing attachments
Specification Reference	ebMS v3.0, Section 7.3
Profiling Rule (a)	AS4 MSH implementations are REQUIRED to use the Attachment-Content-Only transform when building application payloads using SOAP with Attachments [SOAPATTACH]. The Attachment-Complete transform is not supported by this profile.
Profiling Rule (b)	AS4 MSH implementations are REQUIRED to include the entire

	eb:Messaging header block and all MIME body parts of included payloads in the signature.
Alignment	
Test References	

#### 436 4.1.6 Encrypting Messages

Specification Feature	Encrypting messages
Specification Reference	ebMS v3.0, Section 7.4
Profiling Rule (a)	AS4 MSH implementations are SHALL NOT encrypt the eb:PartyInfo section of the eb:Messaging header. Other child elements of the eb:Messaging header MAY be encrypted or left unencrypted as defined by trading partner agreements or collaboration profiles.
Profiling Rule (b)	If an AS4 user message is to be encrypted and the user-specified payload data is to be packaged in the SOAP Body, AS4 MSH implementations are REQUIRED to encrypt the SOAP Body.
Alignment	
Test References	

#### 437 4.1.7 Encrypting SOAP with Attachments Messages

Specification Feature	Encryption of message attachments.
Specification Reference	ebMS v3.0, Section 7.5
Profiling Rule (a)	If an AS4 user message is to be encrypted and the user-specified payload data is to be packaged in conformance with the [SOAPATTACH] specification, AS4 MSH implementations are REQUIRED to encrypt the MIME Body parts of included payloads.
Alignment	
Test References	
Notes	

#### 438 4.1.8 Generating Receipts

Specification Feature	eb:Receipt signal messages
Specification Reference	ebMS v3.0, Section 7.12..2 (Persistent Signed Receipt) ebMS v3.0, Section 5.2.3.3, eb:Messaging/eb:SignalMessage/eb:Receipt
Profiling Rule (a): Receipts for reception	When a Receipt is to be used solely as a reception indicator (for reception awareness), the sender of the Receipt MAY decide to not insert the

awareness	ebbpsig:NonRepudiationInformation child element. No other element than ebbpsig:NonRepudiationInformation is allowed as child of eb:Receipt. If this element is not used, then eb:Receipt MUST be empty.
Profiling Rule (b): Receipts for Non Repudiation of Receipt (NRR)	<p>Non Repudiation of Receipt (NRR) requires eb:Receipt signals to be signed, and to contain digests of the original message parts for which NRR is required.</p> <p>When signed receipts are requested in AS4 that make use of default conventions, the Sending message handler (i.e. sending messages for which signed receipts are expected) MUST identify message parts using Content-Id values in the MIME headers, and MUST sign the SOAP body and all attachments using the <a href="http://docs.oasis-open.org/wss/oasis-wss-SwAProfile-1.1#Attachment-Content-Signature-Transform">http://docs.oasis-open.org/wss/oasis-wss-SwAProfile-1.1#Attachment-Content-Signature-Transform</a> within the SignedInfo References list.</p> <p>As a reminder, the Sending message handler MUST not encrypt any signed content before signing (Section 7.6 in ebMS V3). If using compression in an attachment, the Sending message handler MUST sign the data after compression (see section 3.1). Variations from default conventions can be agreed to bilaterally, but conforming implementations are only required to provide receipts using the default conventions described in this section.</p>
Profiling Rule (c)	<p>An AS4 message that has been digitally signed MUST be acknowledged with a message containing an eb:Receipt signal that itself is digitally signed. The eb:Receipt MUST contain the information necessary to provide nonrepudiation of receipt of the original message, as described in profiling rule (b).</p> <p>NOTE: the digest(s) to be inserted in the ebbp:MessagePartNRInformation element(s) or the Receipt, related to the original message parts for which a receipt is required, may be obtained from the signature information of the original message (ds:SignedInfo element), as only those parts that have been signed are subject to NRR. This means a Receiving message handler may not have to compute digests outside its security module.</p>
Alignment	
Test References	

439

#### 4.1.9 MIME Header and Filename information

Specification Feature	Optional presence of a “filename” value in “Content-disposition” header on MIME body parts.
Specification Reference	MIME specification (IETF) [RFC2045]
Profiling Rule (a)	The “Content-disposition” header on MIME body parts, when used, MUST carry file name information. Implementations MUST support the setting (when sending) and reading (when receiving) of “Content-disposition” header,
Profiling Rule (b)	When end users wish to supply file names and have that information

	confidential, they SHOULD use TLS/SSL based encryption.
Alignment	
Test References	

## 440 4.2 AS4 Usage Agreements

441 This section defines the operational aspect of the profile: configuration aspects that users have to agree  
442 on, mode of operation, etc. This section is not normative and is provided here only as guidance for users.

443 All the user agreement options related to a specific type of message exchange instance (e.g. related to a  
444 specific type of business transaction) are controlled by the Processing Mode (PMode) parameters  
445 defined in the ebMS Core V3 specification. This section only lists the parameters that are particularly  
446 relevant to AS4.

### 447 4.2.1 Controlling Content and Sending of Receipts

Scope of the Profile Feature	Choose among options in sending Receipts.
Specification Feature	
Specification Reference	ebMS v3.0, Section 2.2
Usage Profiling (a)	<p>Must eb:Receipts be used for non-repudiation of receipt (NRR), or just act as reception awareness feature? For non-repudiation, the eb:Receipt element must contain a well-formed ebbp:NonRepudiationInformation element. This is indicated by the new PMode parameter:</p> <ul style="list-style-type: none"> <li>• <b>Pmode[1].Security.SendReceipt.NonRepudiation</b> : value = 'true' (to be used for non-repudiation of receipt), value = 'false' (to be used simply for reception awareness).</li> </ul>
Usage Profiling (b)	<p>Receipts for One-Way/Push MEP:</p> <p>Both synchronous and asynchronous transport channels for the response (eb:Receipt) are allowed by this profile. and Callback)</p> <p>This option is controlled by the PMode parameter:</p> <ul style="list-style-type: none"> <li>• <b>Pmode[1].Security.SendReceipt.ReplyPattern</b>: value = 'Response' (sending receipts on the HTTP response or back-channel).</li> <li>• <b>Pmode[1].Security.SendReceipt.ReplyPattern</b>: value = 'Callback' (sending receipts using a separate connection.)</li> </ul>
Usage Profiling (c)	<p>Receipts for the One-Way/Pull MEP:</p> <ul style="list-style-type: none"> <li>• <b>Pmode[1].Security.SendReceipt.ReplyPattern</b>: value = 'Callback' (sending receipts using a separate connection, and not bundled with PullRequest.)</li> </ul>

Test References	
Notes	

448 **4.2.2 Error Handling Options**

Specification Feature	Error Handling options
Specification Reference	
Usage Profiling (a): Receiver-side error	<p>All Receiver-side error reporting options are left for users to agree on, including the choice to not report at all:</p> <ul style="list-style-type: none"> <li>• <b>PMode[1].ErrorHandling.Report.ReceiverErrorsTo:</b> recommendation is to report such Receiver-side errors to the Sender. Otherwise: reporting URI that is different from sender URI?</li> <li>• <b>PMode[1].ErrorHandling.Report.AsResponse:</b> recommendation for one-way messages (except when pulling is in use) is value="true": report errors on the back-channel of erroneous messages. Errors for pulled messages can only be reported on a separate connection.</li> <li>• <b>PMode[1].ErrorHandling.Report.ProcessErrorNotifyConsumer:</b> (true / false) for controlling escalating the error to the application layer.</li> </ul>
Usage Profiling (b): Reception Awareness errors	<p>What is the behavior of a Sender that failed to receive a Receipt (even after message retries)?</p> <p>(a) No error reporting (in case no reception awareness required).</p> <p>(b) Error reporting from the Sender MSH to its message Producer (application-level notification). Error type: EBMS:0301: MissingReceipt (see Section 3.2 in Additional Features.)</p> <p>PMode parameter:</p> <ul style="list-style-type: none"> <li>• <b>PMode[1].ErrorHandling.Report.MissingReceiptNotifyProducer:</b> (new) true if (b), false if (a)</li> <li>• <b>PMode[1].ErrorHandling.Report.SenderErrorsTo:</b> (in case an error should be sent about such failures – e.g. to a third party if not to the original Receiver of the non-acknowledged user message.)</li> </ul>
Usage Profiling (c): Error about Receipts	<p>How are errors about Receipt messages reported?</p> <p>Pmode parameters:</p> <ul style="list-style-type: none"> <li>• <b>PMode[1].ErrorHandling.Report.SenderErrorsTo:</b> reporting URI that is different from Receiver URI?</li> <li>• <b>PMode[1].ErrorHandling.Report.AsResponse:</b> (true / false) NOTE: In case of Receipts already sent over the HTTP back-channel, can only be "false" meaning such errors will be sent over separate connection.</li> <li>• <b>PMode[1].ErrorHandling.Report.ProcessErrorNotifyProducer:</b> (true / false) for controlling escalating the error to the application layer.</li> </ul>

	er.

### 449 4.2.3 Securing the PullRequest

Specification Feature	Pulling authorization options
Specification Reference	ebMS v3.0, Section 7.11.x AS4 Conformance Profile authorization options (section 2.1.1)
Usage Profiling (a)	<p>An AS4 Sending MSH MAY authenticate a Receiving MSH that sends a PullRequest in two ways:</p> <ul style="list-style-type: none"> <li>(a) (Option 1 in 2.1.1) Use of the WSS security header targeted to the “ebms” actor, as specified in section 7.10 of ebMS V3, with the wsse:UsernameToken profile.</li> <li>(b) (Option 2 in 2.1.1) by using [WSS11-X509] coupled with the Message Partition Channel that a Pull signal is accessing for pulling messages.</li> </ul> <p>PMode parameters:</p> <ul style="list-style-type: none"> <li>• <b>PMode.Initiator.Authorization:</b> must be set to true (the initiator of a Pull request must be authorized).</li> <li>• <b>PMode.Initiator.Authorization.username:</b> (for option (a))</li> <li>• <b>PMode.Initiator.Authorization.password:</b> (for option (a))</li> <li>• <b>PMode[1].Security.PModeAuthorize:</b> must be set to true in the PMode leg describing the transfer of a pulled message.</li> <li>• <b>PMode[1].Security.X509.sign:</b> (for option (b))</li> <li>• <b>PMode[1].Security.X509.SignatureCertificate:</b> (for option (b))</li> </ul> <p>NOTE: in (b), the PMode parameters about X509 are controlling both the authentication of PullRequest signals and authentication of other User Messages.</p>
Usage Profiling (b)	<p>PullRequest signals: are they sent using the HTTPS transport protocol with optional Client-side Authentication?</p> <p>PMode parameter:</p> <ul style="list-style-type: none"> <li>• <b>PMode[1].Protocol.Address:</b> The URL scheme will indicate whether HTTPS is used or not.</li> </ul>
Alignment	

Test References	
Notes	

#### 450 4.2.4 Reception Awareness Parameters

Specification Feature	Message Replay and Duplicate Detection options
Specification Reference	N/A AS4 Profile: additional features (section 3)
Usage Profiling (a): Sender options	In case Reception Awareness is used: what is the behavior of a Sender that did not receive a Receipt?  (c) No message replay.  (d) Resend the message. Replay parameters: to agree on: (1) retry number, (2) retry frequency.  PMode parameters (additional to those defined in ebMS Core V3): <ul style="list-style-type: none"> <li>• <b>PMode[1].ReceptionAwareness:</b> (true / false)</li> <li>• <b>PMode[1].ReceptionAwareness.Replay:</b> (true / false)</li> <li>• <b>PMode[1].ReceptionAwareness.Replay.Parameters:</b> (contains a composite string specifying: (a) maximum number of retries or some timeout, (b) frequency of retries or some retry rule.</li> </ul>
Usage Profiling (b): Receiver options	Is duplicate detection enabled?  (a) No. duplicates are not detected.  (b) In addition to (a), a receiver detects and eliminates duplicates based on eb:MessageInfo/eb:MessageId.  PMode parameters (additional to those defined in ebMS Core V3): <ul style="list-style-type: none"> <li>• <b>PMode[1].ReceptionAwareness.DuplicateDetection:</b> (true / false)</li> <li>• <b>PMode[1].ReceptionAwareness.DuplicateDetection.Parameters</b></li> </ul>
Others	
Notes	

#### 451 4.2.5 Default Values of Some PMode Parameters

Specification Feature	Default values and authorized values for main PMode parameters.
Specification Reference	ebMS 3.0, Appendix D.3
Usage Profiling (a)	<b>PMode.MEP</b> parameter will be constrained to the following value:

	<a href="http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/ns/core/200704/oneWay">http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/ns/core/200704/oneWay</a>
Usage Profiling (b)	<b>PMode.MEPbinding</b> parameter will be constrained to the following values: <a href="http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/ns/core/200704/push">http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/ns/core/200704/push</a> <a href="http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/ns/core/200704/pull">http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/ns/core/200704/pull</a>
Usage Profiling (c)	<b>PMode.Initiator.Role</b> parameter will have the following default value: <a href="http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/ns/core/200704/initiator">http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/ns/core/200704/initiator</a>
Usage Profiling (d)	<b>PMode.Responder.Role</b> parameter will have the following default value: <a href="http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/ns/core/200704/responder">http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/ns/core/200704/responder</a>
Usage Profiling (e)	<b>PMode[1].BusinessInfo.Service</b> parameter will have the following default value: <a href="http://docs.oasis-open.org/ebxml-msg/as4/200902/service">http://docs.oasis-open.org/ebxml-msg/as4/200902/service</a>  <i>NOTE: this default is to be considered a PMode content default: absence of the PMode itself will cause the default value defined in the ebMS V3 specification (section 4.3) to apply. This value is usually enforced by the MSH implementation itself.</i>
Usage Profiling (f)	<b>PMode[1].BusinessInfo.Action</b> parameter will have the following default value: <a href="http://docs.oasis-open.org/ebxml-msg/as4/200902/action">http://docs.oasis-open.org/ebxml-msg/as4/200902/action</a>  <i>NOTE: this default is to be considered a PMode content default: absence of the PMode itself will cause the default value defined in the ebMS V3 specification (section 4.3) to apply. This value is usually enforced by the MSH implementation itself</i>
Usage Profiling (g)	<b>PMode[1].Reliability</b> parameters are not supported by this profile

## 4.2.6 HTTP Confidentiality and Security

Specification Feature	HTTP Security Management and Options  This table is intended as a guide for users, to specify their own agreements on HTTP confidentiality and security.
Specification Reference	ebMS 3, Section 7, Appendix D.3.6.
Usage Profiling (a)	Is HTTP transport-layer encryption required?  What protocol version(s)?

Usage Profiling (b)	What encryption algorithm(s) and minimum key lengths are required?
Usage Profiling (c)	What Certificate Authorities are acceptable for server certificate authentication?
Usage Profiling (d)	Are direct-trust (self-signed) server certificates allowed?
Usage Profiling (e)	Is client-side certificate-based authentication allowed or required?
Usage Profiling (f)	What client Certificate Authorities are acceptable?
Usage Profiling (g)	What certificate verification policies and procedures must be followed?

453 **4.2.7 Deployment and Processing requirements for CPAs**

Usage Profile Feature	CPA Access
Usage Profiling (a)	Is a specific registry for storing CPAs required? If so, provide details.
Usage Profiling (b)	Is there a set of predefined CPA templates that can be used to create given Parties' CPAs?
Usage Profiling (c)	Is there a particular format for file names of CPAs, in case that file name is different from CPAId value?
Others	

454 **4.2.8 Message Payload and Flow Profile**

Usage Profile Feature	Message Quantitative Aspects
Usage Profiling (a)	What are typical and maximum message payload sizes that must be handled? (maximum, average)
Usage Profiling (b)	What are typical communication bandwidth and processing capabilities of an MSH for these Services?
Usage Profiling (c)	Expected Volume of Message flow (throughput): maximum (peak), average?
Usage Profiling (d)	How many Payload Containers must be present?
Usage Profiling (e)	What is the structure and content of each container? [List MIME Content-Types and other process-specific requirements.] Are there restrictions on the MIME types allowed for attachments?
Usage Profiling (f)	How is each container distinguished from the others? [By a fixed ordering of containers, a fixed Manifest ordering, or specific Content-ID values.]. Any expected relative order of attachments of various types?

Usage Profiling (g)	Is there an agreement that message part filenames must be present in MIME Content-Disposition parameter ?
Others	

455

## 4.2.9 Additional Deployment or Operational Requirements

Usage Profile Feature	Operational or Deployment Conditions
Usage Profiling (a)	Operational or deployment aspects that are object to further requirements or recommendations.
Others	

---

## 456 5 Conformance Clauses

### 457 5.1 AS4 ebHandler Conformance Clause

458 In order to conform to the AS4 ebHandler Profile, an implementation must comply with all normative  
459 statements and requirements in Section 2.1.

460 In particular, it must:

- 461 ● Observe all requirements stated as such in the Feature Set table of Section 2.1.1.
- 462 ● Comply with WS-I requirements listed in Section 2.1.2.
- 463 ● Support the PMode parameters as required in Section 2.1.3.

464 In addition, the implementation must implement the additional features as indicated in Section 3.

465 Finally, the implementation must support the Usage Rules defined in Section 4.1.

466 The Usage Agreements in Section 4.2 are not prescriptive, and implementations are free to support any  
467 subset of the features described, that are not already mandated in sections 2.1, 3 or 4.1.

### 468 5.2 AS4 Light Client Conformance Clause

469 In order to conform to the AS4 Light Client Profile, an implementation must comply with all normative  
470 statements and requirements in Section 2.2.

471 In particular, it must:

- 472 ● Observe all requirements stated as such in the Feature Set table of Section 2.2.1.
- 473 ● Comply with WS-I requirements listed in Section 2.2.2.
- 474 ● Support the PMode parameters as required in Section 2.2.3.

475 In addition, the implementation must implement the additional features as indicated in Section 3.

476 Finally, the implementation must support the Usage Rules defined in Section 4.1.

477 The Usage Agreements in Section 4.2 are not prescriptive, and implementations are free to support any  
478 subset of the features described that are not already mandated in sections 2.2, 3 or 4.1.

### 479 5.3 AS4 Minimal Client Conformance Clause

480 In order to conform to the AS4 Minimal Client Profile, an implementation MUST comply with all  
481 normative statements and requirements for the AS4 Light Client Conformance Clause stated in Section  
482 5.2, with the exception that support for WS-Security is limited to support for the WS-Security  
483 UsernameToken profile [WSS11-UT], to be used for authorization of message pull signals (see section  
484 7.10 in Core Spec). Support for the WS-Security X.509 Certificate Token Profile 1.1 [WSS11-X509] is  
485 not REQUIRED. Clients and servers SHOULD use transport level security for message security for any  
486 message exchange.

### 487 5.4 AS2/AS4 ebHandler Conformance Clause

488 In order to conform to the AS2/AS4 ebHandler Profile, an implementation MUST, in addition to  
489 supporting AS4 message exchanges that comply with all normative statements and requirements

490 specified in section 5.1, also be a conformant implementation of the EDIINT Applicability Statement 2  
491 (AS2, [RFC4130]).

492

## Appendix A Sample Messages

493  
494

This appendix contains examples of the AS4 functionality Non-Repudiation of Receipt (NRR) and an example of an AS4 Pull message signal.

495

### Appendix A.1 Non-Repudiation of Receipt

496

497 When the NonRepudiationInformation element is used in a Receipt, it contains a sequence of Message-  
498 PartNRInformation items for each message part for which evidence of non repudiation of receipt is being  
499 provided. In the normal default usage, these message parts are those that have been signed in the ori-  
500 ginal message. Each message part is described with information defined by an XML Digital Signature  
501 Reference information item. The following example illustrates the ebMS V3 Signal Message header.  
502

```
503 <eb3:Messaging S12:mustUnderstand="true" id="ValueOfMessagingHeader">
504   <eb3:SignalMessage>
505     <eb3:MessageInfo>
506       <eb3:Timestamp>2009-11-06T08:00:09Z</eb3:Timestamp>
507       <eb3:MessageId>orderreceipt@seller.com</eb3:MessageId>
508       <eb3:RefToMessageId>orders123@buyer.com</eb3:RefToMessageId>
509     </eb3:MessageInfo>
510     <eb3:Receipt>
511       <ebbp:NonRepudiationInformation>
512         <ebbp:MessagePartNRInformation>
513           <dsig:Reference URI="#5cb44655-5720-4cf4-a772-19cd480b0ad4">
514             <dsig:Transforms>
515               <dsig:Transform Algorithm="http://www.w3.org/2001/10/xml-exc-c14n#" />
516             </dsig:Transforms>
517             <dsig:DigestMethod Algorithm="http://www.w3.org/2000/09/xmldsig#sha1" />
518             <dsig:DigestValue>o9QDCwWSiGVQACEsJH5nqkVE2s0=</dsig:DigestValue>
519           </dsig:Reference>
520         </ebbp:MessagePartNRInformation>
521         <ebbp:MessagePartNRInformation>
522           <dsig:Reference URI="cid:ald7fdf5-d67e-403a-ad92-3b9deff25d43@buyer.com">
523             <dsig:Transforms>
524               <dsig:Transform
525                 Algorithm="http://docs.oasis-open.org/wss/oasis-wss-SwAProfile-1.1#Attachment-
526 Content-Signature-Transform" />
527             </dsig:Transforms>
528             <dsig:DigestMethod
529               Algorithm="http://www.w3.org/2000/09/xmldsig#sha1" />
530             <dsig:DigestValue>iWNSv2W6SxbOYZliPzZDcXaxrwi=</dsig:DigestValue>
531           </dsig:Reference>
532         </ebbp:MessagePartNRInformation>
533       </ebbp:NonRepudiationInformation>
534     </eb3:Receipt>
535   </eb3:SignalMessage>
536 </eb3:Messaging>
```

537

538 For a signed receipt, a Web Services Security header signing over the signal header (and other  
539 elements as specified in sections 4.1.4 and 4.1.5 ) is required.

540 An example WS-Security header is as follows:

```
541 <wsse:Security S12:mustUnderstand="true">
542   <wsu:Timestamp wsu:Id="_1">
543     <wsu:Created>2009-11-06T08:00:10Z</wsu:Created>
544     <wsu:Expires>2009-11-06T08:50:00Z</wsu:Expires>
545   </wsu:Timestamp>
546   <wsse:BinarySecurityToken
547     EncodingType="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-soap-message-security-
548 1.0#Base64Binary"
549     ValueType="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-x509-token-profile-
550 1.0#X509v3"
551     wsu:Id="_2">MIIFADCCBmgAwIBAgIEOmitted</wsse:BinarySecurityToken>
```

```

552 <ds:Signature Id="_3">
553   <ds:SignedInfo>
554     <ds:CanonicalizationMethod
555       Algorithm="http://www.w3.org/2001/10/xml-exc-c14n#" />
556     <ds:SignatureMethod
557       Algorithm="http://www.w3.org/2000/09/xmldsig#rsa-sha1" />
558     <ds:Reference URI="#ValueOfMessagingHeader">
559       <ds:Transforms>
560         <ds:Transform Algorithm="http://www.w3.org/2001/10/xml-exc-c14n#">
561           <InclusiveNamespaces PrefixList="xsd"
562             xmlns="http://www.w3.org/2001/10/xml-exc-c14n#" />
563         </ds:Transform>
564       </ds:Transforms>
565       <ds:DigestMethod Algorithm="http://www.w3.org/2000/09/xmldsig#sha1" />
566       <ds:DigestValue>ZXnOmitted=</ds:DigestValue>
567     </ds:Reference>
568     <!-- Omitted other reference elements for other signed parts -->
569   </ds:SignedInfo>
570   <ds:SignatureValue>rxap4of8JCpUkOmitted=</ds:SignatureValue>
571   <ds:KeyInfo>
572     <wsse:SecurityTokenReference>
573       <wsse:Reference URI="#_2"
574         ValueType="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-x509-token-
575 profile-1.0#X509v3" />
576     </wsse:SecurityTokenReference>
577   </ds:KeyInfo>
578 </ds:Signature>
579 </wsse:Security>
580

```

## 581 Appendix A.2 Pull Request Signal Message

582 The following example shows an AS4 Pull Request Signal on a particular message partition channel. The  
583 message contains two WS-Security headers:

- 584 1. The first WS-Security header is targeted to the "ebms" role, and is used for authorization of  
585 access to the pull channel. This header is added to the message before the second WS-Security  
586 header.
- 587 2. A second WS-Security header is used to protect the signal message itself. This header is added  
588 to the message after the authorization header, and signs this authorization header, the ebMS  
589 Messaging header and the (empty) SOAP Body element.

```
