Editor:

David Lemire (david.lemire@hii-tsd.com), National Security Agency

Additional artifacts:

This prose specification is one component of a Work Product that also includes:

- Threat hunting AP schemas in multiple formats: https://docs.oasis-open.org/openc2/ap-hunt/v1.0/csd01/schema-development/

Related work:

This specification is related to:

- *Open Command and Control (OpenC2) Language Specification Version 1.0*. Edited by Jason Romano and Duncan Sparrell. Latest stage: https://docs.oasis-open.org/openc2/oc2ls/v1.0/oc2ls-v1.0.html.
- *Open Command and Control (OpenC2) Language Specification Version 1.1*. Edited by Duncan Sparrell and Toby Considine. Latest stage: https://docs.oasis-open.org/openc2/oc2ls/v1.1/oc2ls-v1.1.html.

Abstract:

This specification defines an actuator profile to automate management of cyber threat hunting activities using OpenC2. Threat hunting is the process of proactively and iteratively searching through networks and on endpoints to detect and isolate cyber observables that may indicate threats that evade existing security solutions. This actuator profile defines the OpenC2 Actions, Targets, Arguments, and Specifiers along with conformance clauses to enable the operation of OpenC2 Producers and Consumers in the context of cyber threat hunting. It covers invocation of stored hunting processes (e.g., “hunt books”), passing of hunt parameters, selection of analytics to apply to hunt data, and the expected type(s) and format(s) of information returned by hunting processes.

Status:

This document was last revised or approved by the OASIS Open Command and Control (OpenC2) TC on the above date. The level of approval is also listed above. Check the "Latest stage" location noted above for possible later revisions of this document. Any other numbered Versions and other technical work produced by the Technical Committee (TC) are listed at https://www.oasis-open.org/committees/tc_home.php?wg_abbrev=openc2#technical.

TC members should send comments on this specification to the TC's email list. Others should send comments to the TC's public comment list, after subscribing to it by following the instructions at the "Send A Comment" button on the TC's web page at https://www.oasis-open.org/committees/openc2/.

This specification is provided under the Non-Assertion Mode of the OASIS IPR Policy, the mode chosen when the Technical Committee was established. For information on whether any patents have been disclosed that may be essential to implementing this specification, and any offers of patent licensing terms, please refer to the Intellectual Property Rights section of the TC's web page (https://www.oasis-open.org/committees/openc2/ipr.php).

Note that any machine-readable content (Computer Language Definitions) declared Normative for this Work Product is provided in separate plain text files. In the event of a discrepancy between any such plain text file and display content in the Work Product's prose narrative document(s), the content in the separate plain text file prevails.

Key words:

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in BCP 14 [RFC2119] and [RFC8174] when, and only when, they appear in all capitals, as shown here.

OpenC2 Actuator Profile for Threat Hunting Version 1.0. Edited by David Lemire. 20 September 2023. OASIS Committee Specification Draft 01. https://docs.oasis-open.org/openc2/ap-hunt/v1.0/csd01/ap-hunt-v1.0-csd01.html. Latest stage: https://docs.oasis-open.org/openc2/ap-hunt/v1.0/ap-hunt-v1.0.html.

Notices

Table of Contents

1 Introduction

The content in this section is non-normative, except where it is marked normative.

Note: This Actuator profile is consistent with Version 1.0 of the OpenC2 Language Specification ([OpenC2-Lang-v1.0]).

OpenC2 is a suite of specifications that enables command and control of cyber defense systems and components. OpenC2 typically uses a request-response paradigm where a Command is encoded by a Producer (managing application) and transferred to a Consumer (managed device or virtualized function) using a secure transfer protocol, and the Consumer acts on the request and responds with status and any other requested information.

This specification defines an Actuator profile for **Threat Hunting (TH)**. In particular, the specification comprises a set of Actions, Targets and Target Specifiers, Command Arguments, and Actuator Specifiers that integrates TH functionality with the OpenC2 Command set. Through this Command set, cyber security orchestrators may gain visibility into and provide control over TH functionality in a manner that is independent of the instance of the TH function.

All components, devices, and systems that provide TH functionality MUST implement the identified OpenC2 Actions, Targets, Specifiers, and Arguments as specified in the Conformance section of this specification.

Though cyber defense components, devices, systems and/or instances may implement multiple Actuator profiles, a particular OpenC2 Message may reference at most a single Actuator profile. The scope of this document is limited to TH.

The rest of the specification is organized as follows:

The remaining of Section One includes infomation about the terminology used, document conventions, and purpose of this Actuator profile specification.

Section Two (normative) binds this particular profile to the OpenC2 Language Specification. Section Two enumerates the components of the language specification that are meaningful in the context of TH and defines components that are applicable to this distinct profile. Section Two also defines the Commands (i.e., the Action/Target pairs) that are permitted in the context of TH.

Section Three (normative) presents definitive criteria for conformance so that cyber security stakeholders can be assured that their products, instances and/or integrations are compatible with OpenC2.

1.1 Changes from earlier versions

1.2 Glossary

1.2.1 Definitions of terms

This section is normative.

1.2.1.1 OpenC2 Terms

- **Action**: The task or activity to be performed (e.g., 'deny').
- **Actuator**: The function performed by the Consumer that executes the Command (e.g., 'Stateless Packet Filtering').
- **Argument**: A property of a Command that provides additional information on how to perform the Command, such as date/time, periodicity, duration, etc.
- **Command**: A Message defined by an Action-Target pair that is sent from a Producer and received by a Consumer.
- **Consumer**: A managed device / application that receives Commands. Note that a single device / application can

have both Consumer and Producer capabilities.

- **Message**: A content- and transport-independent set of elements conveyed between Consumers and Producers.
- **Producer**: A manager application that sends Commands.
- **Response**: A Message from a Consumer to a Producer acknowledging a Command or returning the requested resources or status to a previously received Command.
- **Specifier**: A property or field that identifies a Target or Actuator to some level of precision.
- **Target**: The object of the Action, i.e., the Action is performed on the Target (e.g., IP Address).

1.2.1.2 Threat Hunting Terms

- **Threat Hunting**: Cyber threat hunting is a proactive security search through networks, endpoints, and datasets to hunt malicious, suspicious, or risky activities that have evaded detection by existing tools.

SCO	STIX Cyber-observable Objects
STIX	Structured Threat Information eXpression
TC	Technical Committee
TH	Threat Hunting
URI	Uniform Resource Identifier

1.2.3 Document conventions

- Naming conventions
- Font colors and styles

- Typographic conventions

1.5 Overview

Cyber threat hunting is a proactive security search through networks, endpoints, and datasets to hunt malicious, suspicious, or risky activities that have evaded detection by existing tools. Various aspects of threat hunting can be manual, machine-assisted, or automated. This AP defines the use of OpenC2 to invoke machine-assisted or automated threat hunting activities and return associated results. It assumes the availability to the OpenC2 Consumer of relevant data sources that can be accessed and defined huntflows that can be invoked, and applies the OpenC2 introspection model to enable an OpenC2 Producer to determine the data sources and huntflows available from a particular Consumer.

> - https://www.trellix.com/en-us/security-awareness/operations/what-is-cyber-threat-hunting.html

1.6 Purpose and Scope

This Actuator profile specifies the set of Actions, Targets, Specifiers, and Command Arguments that integrates the investigation capabilities of threat hunting (TH) systems with the OpenC2 Command set. Through this Command set, cyber security orchestrators may gain visibility into and provide control over TH functionality in a manner that is independent of the instance of the threat hunting solution.

All components, devices and systems that provide TH functionality will implement the OpenC2 Actions, Targets, Specifiers and Arguments identified as required in this document. Actions that are applicable, but not necessarily required, for TH will be identified as optional.

The purpose of this document is to:

- Identify the required OpenC2 Actions for Consumers with TH functionality
- Identify the required and optional Target types for each Action in the TH class of Actuators
- Identify Actuator-Specifiers and Arguments for each Action/Target pair that are applicable and/or unique to TH
- Annotate each Action/Target pair with a justification and example, and provide sample OpenC2 Commands to a TH with corresponding Responses

This TH profile:

- Does not define or implement Actions beyond those defined in Version 1.0 of the [OpenC2-Lang-v1.0]
- Is consistent with Version 1.0 of the OpenC2 Language Specification

2 OpenC2 Language Binding for Threat Hunting

This section is normative

This section defines the set of Actions, Targets, Specifiers, and Arguments that are meaningful in the context of TH. This section also describes the appropriate format for the status and properties of a Response frame. This section is organized into three major subsections; Command Components, Response Components and Commands.

Extensions to the Language Specification are defined in accordance with [OpenC2-Lang-v1.0], Section 3.1.5, where:

1. The unique name of the threat hunting schema is `oasis-open.org/openc2/v1.0/ap-hunt`.
2. The namespace identifier (nsid) referring to the threat hunting schema is: `th`.
3. The definitions of and conformance requirements for these types are contained in this document.

2.1 OpenC2 Command Components

The components of an OpenC2 Command include Actions, Targets, Actuators and associated Arguments and Specifiers. Appropriate aggregation of the components will define a Command-body that is meaningful in the context of threat hunting.

This specification identifies the applicable components of an OpenC2 Command. The components of an OpenC2 Command include:

- Action: A subset of the Actions defined in the OpenC2 Language Specification that are meaningful in the context of threat hunting.
    - This profile SHALL NOT define Actions that are external to Version 1.0 of the OpenC2 Language Specification
    - This profile MAY augment the definition of the Actions in the context of threat hunting
    - This profile SHALL NOT define Actions in a manner that is inconsistent with version 1.0 of the OpenC2 Language Specification
- Target: A subset of the Targets and Target-Specifiers defined in Version 1.0 of the OpenC2 Language Specification that are meaningful in the context of threat hunting and several Targets (and associated Specifiers) that are defined in this specification
- Arguments: A subset of the Arguments defined in the Language Specification and a set of Arguments defined in this specification

> **NOTE:** Per LS PR #404, when the v2 LS progresses "Actuator" should become "Profile"

- Actuator: A set of specifiers defined in this specification that are meaningful in the context of threat hunting

2.1.1 Actions

Table 2.1.1-1 presents the OpenC2 Actions defined in version 1.0 of the Language Specification which are meaningful in the context of threat hunting. The particular Action/Target pairs that are required or are optional are presented in Section 2.3.

Table 2.1.1-1. Actions Applicable to Threat Hunting

Type: Action (Enumerated)

ID	Name	Description
3	**query**	Initiate a request for information.
30	**investigate**	Task the recipient to aggregate and report information as it pertains to a security event or incident.

2.1.2 Targets

This threat hunting AP employs Targets defined by the OpenC2 Language Specification and Targets specific to threat hunting functionality. The particular Action/Target pairs that are required or are optional are presented in Section 2.3.

2.1.2.1 Common Targets

Table 2.1.2-1 lists the Targets defined in the OpenC2 Language Specification that are applicable to threat hunting.

Table 2.1.2-1. Targets Applicable to Threat Hunting

Type: Target (Choice)

ID	Name	Type	Description
9	**features**	Features	A set of items such as Action/Target pairs, profiles versions, options that are supported by the Actuator. The Target is used with the query Action to determine an Actuator's capabilities
1036	**th**	Theat Hunting	Hunts, Huntflows, Data sources

2.1.2.2 Threat Hunting Targets

The list of common Targets is extended to include the additional Targets defined in this section and referenced with the `th` namespace.

Table 2.1.2-2. Targets Unique to Threat Hunting

Type: AP-Target (Choice)

> **NOTE:** Need better description for huntflows (or a definition in 1.2.1.2) and a description for data sources (or a definition in 1.2.1.2) **NOTE**: updated to v0.7 schema content

ID	Name	Type	#	Description
1	**hunt**	String	1	A procedure to find a set of entities in the monitored environment that associates with a cyberthreat.
2	**huntflows**	Huntflow-Specifiers	1	TH Huntflow specifiers.
3	**datasources**	String	1	

2.1.3 Type Definitions

Common data types are defined in [OpenC2-Lang-V11]. This section defines data types associated with TH activities.

Table 2.1.3-1 AP Target Types

Type: AP-Target (Choice)

> **NOTE**: updated to v0.7 schema content

ID	Name	Type	#	Description
1	**hunt**	String	1	A procedure to find a set of entities in the monitored environment that associates with a cyberthreat.
2	**huntflows**	Huntflow-Specifiers	1	TH Huntflow specifiers.

ID	Name	Type	#	Description
3	**datasources**	String	1	

Table 2.1.3-2 AP Arg Types

Type: AP-Args (Map)

ID	Name	Type	#	Description
1	**huntargs**	Huntargs	1	Arguments for use in conjunction with huntflow implementation.

Table 2.1.3-3 AP Huntargs Type

> **NOTE**: updated to v0.7 schema content

Type: Huntargs (Record{1..*})

ID	Name	Type	#	Description
1	**string_args**	Huntargs$String-args	1	string arguments supplied as huntargs.
2	**integer_args**	Huntargs$Integer-args	1	integer arguments supplied as huntargs.
3	**typed_args**	Typed-Arguments	1	Paired strings of named arguments.
4	**native_oc2**	OC2-Data	1	OC2 Language types supplied as huntargs.
5	**stix**	sco:STIX-Cybersecurity-Observables	1	STIX arguments supplied as untarghs.
6	**stix_extensions**	oca:OCA-STIX-Extensions	1	OCA Extended STIX arguments supplied as huntargs. add a custom stix for oca-asset and event
7	**timeranges**	Timeranges	1	Timeranges used in the execution of a hunt.
8	**datasources**	Datasource-Array	1	Available data sources for hunting. These may be a host monitor, an EDR, a SIEM, a firewall, etc.

Type Name	Type Definition	Description
OC2-Data	ArrayOf(Language-Spec-Types){1..*}	OC2-Data is an array of one or more types defined in the OpenC2 language spec

Type: Language-Spec-Types (Record)

ID	Name	Type	#	Description
1	**artifact**	ls:Artifact	1	An array of bytes representing a file-like object or a link to that object.
2	**device**	ls:Device	1	The properties of a hardware device.
3	**domain_name**	ls:Domain-Name	1	A network domain name.

ID	Name	Type	#	Description
4	**email-address**	ls:Email-Addr	1	A single email address
5	**file**	ls:File	1	Properties of a file.
6	**hashes**	ls:Hashes	1	Not used as an entity; use inside File or other attribute of another type. May be used as a query value.
7	**hostname**	ls:Hostname	1	Value must be a hostname as defined in [RFC1034], Section 3.1
8	**idn_domain_name**	ls:IDN-Domain-Name	1	An internationalized domain name.
9	**idn_email_address**	ls:IDN-Email-Addr	1	A single internationalized email address.
10	**ipv4_address**	ls:IPv4-Addr	1	IPv4 address as defined in [RFC0791].
11	**ipv6_address**	ls:IPv6-Addr	1	IPv6 address as defined in [RFC8200].
12	**ipv4_network**	ls:IPv4-Net	1	IPv4 network targeted by hunt activity.
13	**ipv6_network**	ls:IPv6-Net	1	IPv6 network targeted by hunt activity.
14	**ipv4_connection**	ls:IPv4-Connection	1	A 5-tuple of source and destination IPv4 address ranges, source and destination ports, and protocol.
15	**ipv6_connection**	ls:IPv6-Connection	1	A 5-tuple of source and destination IPv6 address ranges, source and destination ports, and protocol.
16	**iri**	ls:IRI	1	An internationalized resource identifier (IRI).
17	**mac_address**	ls:MAC-Addr	1	A Media Access Control (MAC) address - EUI-48 or EUI-64 as defined in [EUI].
18	**port**	ls:Port	1	Transport Protocol Port Number, [RFC6335]
19	**process**	ls:Process	1	Common properties of an instance of a computer program as executed on an operating system.
20	**uri**	ls:URI	1	A uniform resource identifier (URI).

Type Name	Type Definition	Description
Specified-Arg-Types	ArrayOf(Arg-Type)	Return huntflows that take these argument types.

Type Name	Type Definition	Description
Specified-Arg-Names	ArrayOf(Arg-Name)	Return huntflows that take arguments with these names.

Time ranges are used to specify the time period over which the hunt invoked with an `investigate /hunt` command should examine data.

Type Name	Type Definition	Description
Timeranges	ArrayOf(Timerange)	a timerange used in the execution of a hunt.

Time ranges may be be specified in absolute terms, with a specific start and end time, or for a relative duration leading up to the present time.

Type: Timerange (Choice)

ID	Name	Type	#	Description
1	**timerange_absolute**	Timerange-Abs	1	Absolute timerange, defined by a start and end time in ISO 8601 format.
2	**timerange_relative**	Timerange-Rel	1	Relative timerange, example '3, Days' for last 3 days.

Type: Timerange-Abs (Record{2..*})

ID	Name	Type	#	Description
1	**hunt_start_time**	sco:timerange	1	Start time, as a STIX time string.
2	**hunt_stop_time**	sco:timerange	1	Stop time, as a STIX time string.

Relative time ranges can be specified in units ranging from seconds to days.

Type: Time-Unit (Enumerated)

ID	Name	Description
1	**Days**	
2	**Hours**	
3	**Minutes**	
4	**Seconds**	

Type: Timerange-Rel (Record{2..*})

ID	Name	Type	#	Description
1	**number**	Integer{0..*}	1	Number of specified Time Units used in Relative Timerange.
2	**time_unit**	Time-Unit	1	Time Unit Keywords.

Type Name	Type Definition	Description
Arg-Type	String	Argument types used by a huntflow. Follow STIX naming conventions, with lowercase characters and hyphens replacing spaces. Common types include process, file, and network-traffic.

Type Name	Type Definition	Description
Arg-Name	String	Argument names used by a huntflow. Follow C variable naming conventions. Examples include name, src_port, and x_unique_id.

2.1.4 Command Arguments

The list of common Command Arguments is extended to include the additional Command Arguments defined in this section and referenced with the `th` namespace.

Table 2.1.4-1. Command Arguments Unique to Theat Hunting

Standard OpenC2 Language arguments are available for using in threat hunting commands.

Type: Args (Enumerated)

ID	Name	Description
1	**start_time**	
2	**stop_time**	
3	**duration**	
4	**response_requested**	
1036	**th**	

2.1.5 Actuator Specifiers

Table 2.1.5-1 AP huntflow Actuator Type

Type: Actuator (Enumerated)

ID	Name	Description
1036	**th**	

Table 2.1.5-2 AP huntflow Specifiers Type

Type: huntflow-Specifiers (Map)

ID	Name	Type	#	Description
1	**path**	String	1	Return huntflows at and below this filesystem location (absolute path).
2	**tags**	Tags	1	Return huntflows with these keywords.
3	**arg_types**	Specified-Arg-Types	1	Return huntflows that take these argument types.
4	**arg_names**	Specified-Arg-Names	1	Return huntflows that take these argument types.
5	**format_types**	Return-Type	1	Return huntflows that produce these output types.
6	**return_format**	Huntflow-Sections	1	For each huntflow returned, include these data items.

2.2 OpenC2 Response Components

Table 2.2-1 Threat Hunting Reponse Components

Type: AP-Results (Map{1..*})

ID	Name	Type	#	Description

ID	Name	Type	#	Description
1	**huntflow_info**	Ap-results$huntflow-info	1	Structured data returned by Query: huntflows.
2	**datasources**	Datasource-Array	1	Datasource names and info returned by Query Datasources.
3	**stix_returns**	sco:STIX-Cybersecurity-Observables	1	STIX SCO object returns

Table 2.2-2 Threat Hunting Reponse Type: Huntflow Info

Type Name	Type Definition	Description
Huntflow-Info-Array	ArrayOf(Huntflow-Info)	Structured data returned by Query: Huntflows.

Table 2.2-3 Threat Hunting Reponse Type: Datasource Array

Type Name	Type Definition	Description
Datasource-Array	ArrayOf(Datasource)	An Array of Datasources, with multiple uses in Threathunting

2.2.1 Response Status Codes

2.3 OpenC2 Commands

An OpenC2 Command consists of an Action/Target pair and associated Specifiers and Arguments. This section enumerates the allowed Commands and presents the associated Responses.

Table 2.3-1 defines the Commands that are valid in the context of the threat huntung profile. An Action (the top row in Table 2.3-1) paired with a Target (the first column in Table 2.3-1) defines a valid Command. The subsequent subsections provide the property tables applicable to each OpenC2 Command.

Table 2.3-1 Command Matrix

	query	investigate
features	valid	
/huntflows	valid	
/datasources	valid	
/hunt		valid

Table 2.3-2 defines the Command Arguments that are valid for each of the commands defines in the threat huntung profile. A Command (the top row in Table 2.3-2) paired with an Argument (the first column in Table 2.3-2) defines an allowable combination. The subsection identified at the intersection of the Command/Argument provides details applicable to each Command as influenced by the Argument.

Table 2.3-2 Command Arguments Matrix

		query features	query /huntflows	query /datasources	investigate /hunt	
	response_requested	2.3.1.1	2.3.1.2	2.3.1.3	2.3.2	
	other argument #1					

		query features	query /huntflows	query /datasources	investigate /hunt	
	other argument #2					
	...					
	other argument *n*					

2.3.1 Query

2.3.1.1 Query Features

The `query features` Command MUST be implemented in accordance with Version 1.0 of the [OpenC2-Lang-v1.0].

2.3.1.2 Query /huntflows

The `query /huntflows` command is used to identify the set of huntflowss available from a specific threat hunting consumer.

OpenC2 Consumers that receive a `query /huntflows` Command:

- but cannot parse or process the Command
  - MUST NOT respond with a OK/200
  - SHOULD respond with status code 400
  - MAY respond with the 500 status code
- but do not support the `/huntflows` Target
  - MUST NOT respond with a OK/200
  - SHOULD respond with status code 501
  - SHOULD respond with "Command not supported" in the status text
  - MAY respond with status code 500

2.3.1.3 Query /datasources

The `query /datasources` command is used to identify the set of data sources available from a specific threat hunting consumer.

OpenC2 Consumers that receive a `query /datasources` Command:

- but cannot parse or process the Command
  - MUST NOT respond with a OK/200
  - SHOULD respond with status code 400
  - MAY respond with the 500 status code
- but do not support the `/datasources` Target
  - MUST NOT respond with a OK/200
  - SHOULD respond with status code 501
  - SHOULD respond with "Command not supported" in the status text
  - MAY respond with status code 500

2.3.2 Investigate /hunt

The `investigate /hunt` command is used to instigate the use of a selected huntflow in combination with a specified set of threat hunting arguments.

OpenC2 Producers that send `investigate /hunt` Commands:

- MAY populate the Command Arguments field with *fill in with appropriate TH arguments*

OpenC2 Consumers that receive a `investigate /hunt` Command:

- but cannot parse or process the Command
    - MUST NOT respond with a OK/200
    - SHOULD respond with status code 400
    - MAY respond with the 500 status code
- but do not support the `/hunt` Target
    - MUST NOT respond with a OK/200
    - SHOULD respond with status code 501
    - SHOULD respond with "Command not supported" in the status text
    - MAY respond with status code 500

3 Conformance

This section is normative.

==

> The following rough approach to conformance was discussed and approved at the 7 June 2023 working meeting. Delete this material once the text in 3.1 and 3.2 is approved.

- Define
  - Producer conformance target
  - Consumer conformance target
- Each conformance target:
  - MUST
    - conform to the Architecture and LS
    - implement `query features` (per LS)
    - implement `query /huntflows`, `investigate /hunt` (per AP)
  - SHOULD
    - implement at least one approved transfer spec
    - implement `query /datasources` (per AP)
  - make adjustments for argument handling as need determined

==

3.1 Conformance Targets

This AP defines two conformance targets:

- **TH Producer** -- an OpenC2 Producer that creates and transmits requests consistent with this AP
- **TH Consumer** -- an OpenC2 Consumer that receives and processes requests consistent with this AP and returns corresponding responses

3.2 Conformance Requirements

3.2.1 General TH Conformance Requirements

All TH Producers and Consumers MUST:

1. Conform to the requirements of the OpenC2 Architecture Specification
2. Conform to the requirements of the OpenC2 Language Specification

3.2.2 TH Producer Conformance Requirements

TH Producers MUST:

1. Generate and transmit the "`query features`" command as defined in Section 4.1 of the OpenC2 Language Specification.
2. Generate and transmit the "`query /huntflows`" command as defined in this specification and process corresponding responses.
3. Generate and transmit the "`investigate /hunt`" command as defined in this specification and process corresponding responses.

TH Producers SHOULD:

1. Conform with at least one OpenC2 transfer specification.
2. Generate and transmit the "`query /datasources`" command as defined in this specification and process corresponding responses.

3.2.3 TH Consumer Conformance Requirements

TH Consumers MUST:

1. Receive and process the `"query features"` command as defined in Section 4.1 of the OpenC2 Language Specification and return corresponding responses.
2. Receive and process the `"query /huntflows"` command as defined in this specification and return corresponding responses.
3. Receive and process the `"investigate /hunt"` command as defined in this specification and return corresponding responses.

TH Producers SHOULD:

1. Conform with at least one OpenC2 transfer specification.
2. Receive and process the `"query /datasources"` command as defined in this specification and return corresponding responses.

Annex A. Schemas

> **NOTE:** This will become a standard section of OpenC2 APs to align with the ITU-T convention that an Annex is part of the normative content, whereas an Appendix is not.

This AP specification is composed of:

- This specification document
- The JADN schema for the TH AP, in the seperate file `ap-hunt.jadn`
- The JADN schema for the TH AP in JDIL format, in the separate file `ap-hunt.jidl`

In the event of any conflict among these represenations, the contents of `ap-hunt.jadn` SHALL be considered authoritative.

Appendix A. References

This appendix contains the normative and informative references that are used in this document.

While any hyperlinks included in this appendix were valid at the time of publication, OASIS cannot guarantee their long-term validity.

A.1 Normative References

The following documents are referenced in such a way that some or all of their content constitutes requirements of this document.

(Reference sources: For references to IETF RFCs, use the approved citation formats at:
http://docs.oasis-open.org/templates/ietf-rfc-list/ietf-rfc-list.html.
For references to W3C Recommendations, use the approved citation formats at:
http://docs.oasis-open.org/templates/w3c-recommendations-list/w3c-recommendations-list.html.

A.2 Informative References

[RFC3552]

Rescorla, E. and B. Korver, "Guidelines for Writing RFC Text on Security Considerations", BCP 72, RFC 3552, DOI 10.17487/RFC3552, July 2003, https://www.rfc-editor.org/info/rfc3552.

Appendix B. Safety, Security and Privacy Considerations

(Note: OASIS strongly recommends that Technical Committees consider issues that might affect safety, security, privacy, and/or data protection in implementations of their specification and document them for implementers and adopters. For some purposes, you may find it required, e.g. if you apply for IANA registration.

While it may not be immediately obvious how your specification might make systems vulnerable to attack, most specifications, because they involve communications between systems, message formats, or system settings, open potential channels for exploit. For example, IETF [RFC3552] lists “eavesdropping, replay, message insertion, deletion, modification, and man-in-the-middle” as well as potential denial of service attacks as threats that must be considered and, if appropriate, addressed in IETF RFCs.

In addition to considering and describing foreseeable risks, this section should include guidance on how implementers and adopters can protect against these risks.

We encourage editors and TC members concerned with this subject to read *Guidelines for Writing RFC Text on Security Considerations*, IETF [RFC3552], for more information.

Remove this note before submitting for publication.)

Appendix C. Acknowledgments

Note: A Work Product approved by the TC must include a list of people who participated in the development of the Work Product. This is generally done by collecting the list of names in this appendix. This list shall be initially compiled by the Chair, and any Member of the TC may add or remove their names from the list by request. Remove this note before submitting for publication.

C.1 Special Thanks

Substantial contributions to this document from the following individuals are gratefully acknowledged:

Participant Name, Affiliation or "Individual Member"

C.2 Participants

The following individuals have participated in the creation of this specification and are gratefully acknowledged:

OpenC2 TC Members:

First Name	Last Name	Company
Philippe	Alman	Something Networks
Alex	Amirnovman	Company B
Kris	Anderman	Mini Micro
Darren	Anstman	Big Networks

Appendix D. Revision History

Revision	Date	Editor	Changes Made
ap-hunt-v1.0-wd01	yyyy-mm-dd	Editor Name	Initial working draft

Appendix E. Threat Hunting Command / Response Examples

E.1 Example 1: Query Features

```
  "action": "query",
  "target": {
    "features": [
      "pairs"
    ]
  }
}
```

A Language Specification command, Query: Features is used to gather information from consumers about their OpenC2 capabilities. A Response may

```
  "results": {
    "pairs": [
      "query: features, /huntflows, /datasources",
      "investigate: /hunt"
    ]
  },
  "status": "OK"
}
```

E.2 Example 2: Query huntflows

```
    "action": "query",
    "target": {
        "th": {
            "huntflows": {
                "tags": "searchable_tag",
                "format_types": {
                    "var_name": "desired_return_variable"
                }
            }
        }
    }
}
```

Query is extended in this profile to include additional targets. huntflows and Datasources are available as Targets to provide data to gather information about Threat Hunting processes. This command makes use of the "tags" and "format_types" specifiers (with example values) to filter the list of threathunting processes are listed as available from the consumer. This example command also makes use of the optional command_id field, that is not required to be sent in every command, but is supported in the OpenC2 Language Specification.

E.3 Example 3: Investigate Hunt

```
{
    "action": "investigate",
    "target": {
        "th": {
            "hunt": {
                "path_relative": "path/name/example"
            }
        }
    },
    "args": {
        "response_requested": "status",
        "th": {
            "huntargs": {
                "timerange": {
                    "timerange_relative": {
                        "number": "15",
                        "time_unit": "Minutes"
                    }
                },
                "datasource": "Datasource_Name",
                "hunt_process": {
                    "uuid": "1234567890"
                }
            }
        }
    }
}
```

Appendix F. Notices

This document and the information contained herein is provided on an "AS IS" basis and OASIS DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTY THAT THE USE OF THE INFORMATION HEREIN WILL NOT INFRINGE ANY OWNERSHIP RIGHTS OR ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

As stated in the OASIS IPR Policy, the following three paragraphs in brackets apply to OASIS Standards Final Deliverable documents (Committee Specification, OASIS Standard, or Approved Errata).

[OASIS requests that any OASIS Party or any other party that believes it has patent claims that would necessarily be infringed by implementations of this OASIS Standards Final Deliverable, to notify OASIS TC Administrator and provide an indication of its willingness to grant patent licenses to such patent claims in a manner consistent with the IPR Mode of the OASIS Technical Committee that produced this deliverable.]

[OASIS invites any party to contact the OASIS TC Administrator if it is aware of a claim of ownership of any patent claims that would necessarily be infringed by implementations of this OASIS Standards Final Deliverable by a patent holder that is not willing to provide a license to such patent claims in a manner consistent with the IPR Mode of the OASIS Technical Committee that produced this OASIS Standards Final Deliverable. OASIS may include such claims on its website, but disclaims any obligation to do so.]

[OASIS takes no position regarding the validity or scope of any intellectual property or other rights that might be claimed to pertain to the implementation or use of the technology described in this OASIS Standards Final Deliverable or the extent to which any license under such rights might or might not be available; neither does it represent that it has made any effort to identify any such rights. Information on OASIS' procedures with respect to rights in any document or deliverable produced by an OASIS Technical Committee can be found on the OASIS website. Copies of claims of rights made available for publication and any assurances of licenses to be made available, or the result of an attempt made to obtain a general license or permission for the use of such proprietary rights by implementers or users of this OASIS Standards Final Deliverable, can be obtained from the OASIS TC Administrator. OASIS makes no representation that any information or list of intellectual property rights will at any time be complete, or that any claims in such list are, in fact, Essential Claims.]
