# 1 Introduction

This document intends to meet this OASIS requirement on conformance clauses for providers and consumers of cryptographic services via PKCS#11 ([PKCS11-Base] Section 6 - PKCS#11 Implementation Conformance) through profiles that define the use of PKCS#11 data types, objects, functions and mechanisms within specific contexts of provider and consumer interaction. These profiles define a set of normative constraints for employing PKCS#11 within a particular environment or context of use. They may, optionally, require the use of specific PKCS#11 functionality or in other respects define the processing rules to be followed by profile actors.

For normative definition of the elements of PKCS#11 specified in these profiles, see the [PKCS#11 Cryptographic Token Interface Base Specification](#) ([PKCS11-Base]) and the [PKCS#11 Cryptographic Token Interface Current Mechanisms](#) ([PKCS11-Curr]). Illustrative guidance for the implementation of providers and consumers of PKCS#11 is provided in the [PKCS#11 Cryptographic Token Interface Usage Guide](#) ([PKCS11-UG]).

## 1.1 IPR Policy

## 2 Profiles

### 2.1 PKCS #11 Profiles

This document defines a selected set of conformance clauses which form PKCS #11 Profiles. The PKCS 11 TC also welcomes proposals for new profiles. PKCS 11 TC members are encouraged to submit these proposals to the PKCS 11 TC for consideration for inclusion in a future version of this TC-approved document. However, some OASIS members MAY simply wish to inform the committee of profiles or other work related to PKCS #11.

### 2.2 Guidelines for Specifying Conformance Clauses

This section provides a checklist of issues that SHALL be addressed by each clause.

1. Implement functionality as mandated by **[PKCS11-Base] Section 6** (PKCS#11 Implementation Conformance)
2. Specify the list of additional data types that SHALL be supported
3. Specify the list of additional attributes that SHALL be supported
4. Specify the list of additional objects that SHALL be supported
5. Specify the list of additional functions that SHALL be supported
6. Specify the list of additional mechanisms that SHALL be supported

### 2.3 Guidelines for Validating Conformance to PKCS #11 Profiles

A PKCS #11 provider implementation SHALL claim conformance to a specific provider profile only if it instruments all required data types, attributes, objects, functions and mechanisms of that profile

- All data types specified as required in that profile
- All attributes specified as required in that profile
- All objects specified as required in that profile
- All functions specified as required in that profile
- All mechanisms specified as required in that profile

A PKCS #11 consumer implementation SHALL claim conformance to a specific consumer profile only if it instruments all required data types, attributes, objects, functions and mechanisms of that profile

- All data types specified as required in that profile
- All attributes specified as required in that profile
- All objects specified as required in that profile
- All functions specified as required in that profile
- All mechanisms specified as required in that profile

Note: items may be specified either directly in a profile or by reference to other profiles. Where another profile is referenced as required, the combination of the requirements of all referenced required profiles (directly or indirectly) SHALL apply.

### 2.4 Defined Profile Identifiers

Profile objects (object class CKO\_PROFILE) describe which PKCS #11 profiles the token implements.

The **CKA\_PROFILE** attribute identifies a profile that the token implements.

<b>Attribute</b>	<b>Data type</b>	<b>Meaning</b>
CKA_PROFILE_ID	CK_PROFILE_ID	ID of the supported profile.

The following table defines the **CK\_PROFILE\_ID** values:

<b>Constant</b>	<b>Meaning</b>
CKP_INVALID_ID	Invalid profile
CKP_BASELINE_PROVIDER	Baseline Provider
CKP_EXTENDED_PROVIDER	Extended Provider
CKP_AUTHENTICATION_TOKEN	Authentication Token
CKP_PUBLIC_CERTIFICATES_TOKEN	Public Certificates Token
CKP_VENDOR_DEFINED	Vendor defined

## 3 Conformance

### 3.1 Purpose of this Section

The following subsections describe currently-defined profiles related to the use of PKCS #11. The profiles define classes of PKCS #11 functionality to which an implementation can declare conformance.

### 3.2 Baseline Consumer Clause

A PKCS #11 consumer calls a PKCS #11 provider implementation of the PKCS #11 API in order to use the cryptographic functionality from that provider.

This profile specifies the most basic functionality that would be expected of a conformant PKCS #11 consumer – the ability to consume information via the cryptographic services offered by a provider.

#### 3.2.1 Implementation Conformance

An implementation is a conforming Baseline Consumer Clause if it meets the conditions as outlined in the following section.

#### 3.2.2 Conformance of a PKCS #11 Baseline Consumer

  - b. CKO\_PROFILE ([PKCS11-Base] 4.13) with value CKP\_PUBLIC\_CERTIFICATES\_TOKEN
6. Supports the following functions:
  - a. None specified
7. Supports the following mechanisms:
  - a. None specified
8. Supports the following object location requirements:
  - a. All certificates are publicly readable, able to be found on the token without a login having been performed
  - b. All certificates for which a matching private key also exists on the token must have a matching CKA\_ID attribute for the certificate and private key
  - c. One or more of the following conditions must be met:
    - i. The matching private key for a certificate can be found via C\_FindObjects using the matching CKA\_ID value without a login having been performed;
    - ii. The matching public key for a certificate can be found via C\_FindObjects using the matching CKA\_ID value without a login having been performed.
9. Optionally supports any clause within [PKCS11-Base] that is not listed above
10. Optionally supports extensions outside the scope of this standard (e.g., vendor defined extensions, conformance clauses) that do not contradict any PKCS #11 requirements.
