I'm forwarding this comment that Paul Knight made in a Jira issue while setting up the spec repository.

You have previously committed to the spec repository.

## Paul Knight commented on TCADMIN-3638:

- checked links, etc.
  - noted that two text strings have been turned into "invalid" hyperlinked text (although not visible as blue text)
  - 3.11.6 - "C:\Users\Users\code\input.c(25"
  - 3.14.14 - "C:\Users\Mary\code"
  - It appears that someone changed these text strings to remove the blue (default) color in the document, but left the hyperlinks intact. These elements were in the initial material submitted by the TC for csprd01.
  - not a blocking issue, just possibly confusing to users
