TOSCA Version 2.0 CS01 Public Review 01 Comment Resolu

Comment #	Title or Short Summary	Commenter Description	Link to Comment	Commenter	TC Decision	Material Change *(y/n)*
1	Policy templates	Section 3.6 introduces Policy Templates, which are not mentioned anywhere else in the document. Rather, the rest of the document refers to Policy Definitions as components of a Service Template. As far as I see, Templates in TOSCA are	https://groups.oasis-open.org/discussion/some-comments-on-tosca-v20-committee-specification-01	Roberto Mameli	Edit to use the term Policy Definition rather than policy template.	n
2	Operational model	Section 4 (TOSCA Operational model), last paragraph, begins with the following sentence: "Note that it is not mandatory for compliant TOSCA implementations to four kinds of TOSCA abstractions defined in Section 2.4 support all three service lifecycle phases.". The meaning is almost clear, but I think that the sentence should be slightly rephrased. Further, reference to section 2.4 is probably wrong (maybe the correct one is 2.3)	https://groups.oasis-open.org/discussion/some-comments-on-tosca-v20-committee-specification-01	Roberto Mameli	Remove the words "to four kinds of TOSCA abstractions defined in Section 2.4" that was incorrectly left as part of editing. The reference is outdated and was intended to point to Chapter 3. The correct link is present at the end of the paragraph	n
3	Declarative workflows	Section 13.1 (Declarative Workflows) is empty	https://groups.oasis-open.org/discussion/some-comments-on-tosca-v20-committee-specification-01	Roberto Mameli	The TC decided to defer work on defer work on declarative workflows to a future release. We will indicated this in section 13.1 by saying "Subject to further study".	n

3	Imperative workflows	Section 13.2 (Imperative Workflows) is very detailed, but I wonder if you can add a couple of examples that help in clarifying how workflows are actually defined in TOSCA.	https://groups.oasis-open.org/discussion/some-comments-on-tosca-v20-committee-specification-01	Roberto Mameli	The TC plans to add detailed examples in a future version of the TOSCA specification and sollicits contributions related to workflows from the TOSCA community.	n
