

Web Services Brokered Notification 1.3(WS-BrokeredNotification)

Committee Specification, 31 July 2006

5 6	
7 8	Document identifier: wsn-ws_brokered_notification-1.3-spec-cs-01
9 10	Location: http://docs.oasis-open.org/wsn/wsn-ws_brokered_notification-1.3-spec-cs-01.pdf
11 12 13	Editors: Dave Chappell, Sonic Software <chappell@sonicsoftware.com> Lily Liu, webMethods <lily.liu@webmethods.com></lily.liu@webmethods.com></chappell@sonicsoftware.com>
14 15	Abstract: The Event-driven, or Notification-based, interaction pattern is a commonly used p

The Event-driven, or Notification-based, interaction pattern is a commonly used pattern for inter-object communications. Examples exist in many domains, for example in publish/subscribe systems provided by Message Oriented Middleware vendors, or in system and device management domains. This notification pattern is increasingly being used in a Web services context.

WS-Notification is a family of related specifications that define a standard Web services approach to notification using a topic-based publish/subscribe pattern. It includes: standard message exchanges to be implemented by service providers that wish to participate in Notifications, standard message exchanges for a notification broker service provider (allowing publication of messages from entities that are not themselves service providers), operational requirements expected of service providers and requestors that participate in notifications, and an XML model that describes topics. The WS-Notification family of documents includes three normative specifications: [WS-BaseNotification], WS-BrokeredNotification, and [WS-Topics].

wsn-ws_brokered_notification-1.3-spec-cs-01
Copyright © OASIS Open 2004-2006. All Rights Reserved.

29 This document defines the Web services interface for the NotificationBroker. A 30 NotificationBroker is an intermediary that, among other things, allows publication of 31 messages from entities that are not themselves service providers. It includes standard 32 message exchanges to be implemented by NotificationBroker service providers along 33 with operational requirements expected of service providers and requestors that 34 participate in brokered notifications. This work relies upon WS-BaseNotification. 35 Status: 36 This document is published by the OASIS WS-Notification Technical Committee as a 37 "Committee Specification". 38 Committee members should send comments on this specification to the wsn@lists.oasis-39 open.org list. Others may submit comments to the TC via the web form found on the 40 TC's web page at http://www.oasis-open.org/committees/wsn. Click the button for "Send 41 A Comment" at the top of the page. Submitted comments (for this work as well as other 42 works of the TC) are publicly archived and can be viewed at http://lists.oasis-43 open.org/archives/wsn-comment/. 44 For information on whether any patents have been disclosed that may be essential to 45 implementing this specification, and any offers of patent licensing terms, please refer to the Intellectual Property Rights section of the WSN TC web page (http://www.oasis-46 47 open.org/committees/wsn/). 48 The errata document for this specification is maintained at:

http://docs.oasis-open.org/wsn/wsn-ws brokered notification-1.3-errata.pdf

1 Introduction

86

100

105

- 87 The Event-driven, or Notification-based, interaction pattern is a commonly used pattern for inter-
- 88 object communications. Examples exist in many domains, for example, in publish/subscribe
- 89 systems or in system and device management domains. Message brokers are involved in many
- 90 of these systems, such as the ones provided by Message Oriented Middleware vendors.
- 91 This specification defines the Web services interface for the NotificationBroker. A
- 92 NotificationBroker is an intermediary between message Publishers and message Subscribers. A
- 93 NotificationBroker decouples NotificationProducers and Notification Consumers and can provide
- 94 advanced messaging features such as demand-based publishing and load-balancing. A
- 95 NotificationBroker also allows publication of messages from entities that are not themselves
- 96 service providers. This is very similar to a traditional Message Oriented Middleware model.
- 97 The NotificationBroker interface includes standard message exchanges to be implemented by
- 98 NotificationBroker service providers along with operational requirements expected of service
- providers and requestors that participate in brokered notifications. 99

1.1 Goals and Requirements

- 101 The goal of WS-BrokeredNotification is to standardize message exchanges involved in Web
- 102 services publish and subscribe of a message broker. The overall requirements of WS-Notification
- are presented in [WS-BaseNotification]. The following section lists the specific subset of those 103
- 104 objectives realized by WS-BrokeredNotification.

1.1.1 Requirements

- 106 In meeting this goal, the WS-BrokeredNotification specification must explicitly address the 107 following requirements:
- 108 Must allow for a notification broker as an intermediary. A NotificationBroker is an
- 109 intermediary Web service that decouples NotificationConsumers from Publishers. A 110 notification broker can relieve a Publisher from having to implement message exchanges
- associated with NotificationProducer: the NotificationBroker takes on the duties of 111
- subscription management and distributing Notifications on behalf of the Publisher. It 112
- 113 implements NotificationProducer interface. It may implement SubscriptionManager or may
- 114 delegate the subscription management work to another component.
- 115 Must allow for federation of brokers. It must be possible to build configurations with 116 multiple intermediary broker services in a dynamic fashion. This specification must allow for
- 117 a variety of broker topology usage patterns. Among other things, these allow for greater scalability and permit sharing of administrative workload. 118
- 119 Must provide runtime metadata: There must be a mechanism that lets a potential
- 120 Subscriber discover what elements available for a subscription are provided by a 121 NotificationBroker, and in what formats the subscription for a notification can be made.

wsn-ws_brokered_notification-1.3-spec-cs-01

7/31/2006

Copyright © OASIS Open 2004-2006. All Rights Reserved.

Page 4 of 43

- 122 Must conform to WS-BaseNotification: A NotificationBroker must support required 123 message exchanges defined by the [WS-BaseNotification] specification. It must conform to 124 the NotificationProducer and the NotificationConsumer interfaces defined in WS-BaseNotification. 125
- 126 WS-BrokeredNotification must be independent of binding-level details: Transport 127 protocol details must be orthogonal to the subscription and the delivery of the notifications, so that the specification can be used over a variety of different transports. 128
- 129 Must not exclude non-service producers and subscribers: WS-BrokeredNotification 130 design must not exclude a non-service entity to deliver a notification message to a 131 NotificationBroker. It must not exclude a NotificationBroker to send a notification message to 132 a non-service consumer.
- 133 Must provide publisher registration: WS-BrokeredNotification must define standard 134 message exchanges for registering a NotificationPublisher with a NotificationBroker.

135 1.1.2 Non-Goals

137

138

139

142

143

144

145

- 136 The following topics are outside the scope of the WS-BrokeredNotification specification:
 - **Defining the format of notification payloads:** The data carried in Notification payloads is application-domain specific, and WS-BrokeredNotification does not prescribe any particular format for this data.
- 140 Defining any Events or Notifications: The WS-BrokeredNotification specification does not 141 define any "standard" or "built-in" notification situations, events, or messages.
 - Defining the means by which NotificationBrokers are discovered by subscribers: It is beyond the scope of this specification to define the mechanisms for runtime discovery of NotificationBrokers.

1.2 Notational Conventions

- 146
- The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be 147
- interpreted as described in [RFC 2119]. 148
- When describing abstract data models, this specification uses the notational convention used by 149
- 150 the [XML-Infoset]. Specifically, abstract property names always appear in square brackets (e.g.,
- 151 [some property]).
- 152 This specification uses a notational convention, referred to as "Pseudo-schemas" in a fashion
- 153 similar to the WSDL 2.0 Part 1 specification. A Pseudo-schema uses a BNF-style convention to
- 154 describe attributes and elements:
- 155 `?' denotes optionality (i.e. zero or one occurrences),
- 156 `*' denotes zero or more occurrences.
- 157 `+' one or more occurrences,

wsn-ws_brokered_notification-1.3-spec-cs-01 Copyright © OASIS Open 2004-2006. All Rights Reserved.

- `[' and `]' are used to form groups, 158
- 159 `|' represents choice.
 - Attributes are conventionally assigned a value which corresponds to their type, as defined in the normative schema.
 - Elements with simple content are conventionally assigned a value which corresponds to the type of their content, as defined in the normative schema.
 - The use of {any} indicates the presence of an element wildcard (<xs:any/>).
 - The use of @{any} indicates the presence of an attribute wildcard (<xs:anyAttribute/>).

167

160

161 162

163

164

165

166

```
168
169
170
171
172
173
174
175
```

176

177

178 179

180

```
<!-- sample pseudo-schema -->
<element
      required_attribute_of_type_QName="xs:QName"
      optional_attribute_of_type_string="xs:string"?>
  <required_element />
  <optional_element /> ?
  <one_or_more_of_these_elements /> +
  [ <choice_1 /> | <choice_2 /> ] *
</element>
```

Where there is disagreement between the separate XML schema and WSDL files describing the messages defined by this specification and the normative descriptive text (excluding any pseudoschema) in this document, the normative descriptive text will take precedence over the separate files. The separate files take precedence over any pseudo-schema and over any schema and WSDL included in the appendices.

1.3 Namespaces

181 182

183

The following namespaces are used in this document:

Prefix	Namespace		
s	http://schemas.xmlsoap.org/soap/envelope/ OR http://www.w3.org/2003/05/soap-envelope		
xsd	http://www.w3.org/2001/XMLSchema		
wsa	http://www.w3.org/2005/08/addressing		
wsn-b	http://docs.oasis-open.org/wsn/b-2		
wsn-br	http://docs.oasis-open.org/wsn/br-2		
wsn-bw	http://docs.oasis-open.org/wsn/bw-2		
wsn-brw	http://docs.oasis-open.org/wsn/brw-2		
wsrf-bf http://docs.oasis-open.org/wsrf/bf-2			
wsrf-bfw	http://docs.oasis-open.org/wsrf/bfw-2		

1.4 Fault Definitions

- All faults generated by a NotificationBroker, RegisterPublisher, or PublisherRegistrationManager SHOULD be compliant with the WS-BaseFaults [WS-BaseFaults] specification.
- All faults defined by this specification MUST use the following URI for the WS-Addressing [action]
 Message Addressing Property:
- 188 http://docs.oasis-open.org/wsn/fault.

2 Relationship to Other Specifications This specification builds on the basic notification mechanism defined in [WS-BaseNotification] by adding the concept of an intermediary NotificationBroker, and describing additional variants on the publisher role. A NotificationBroker takes on the role of both NotificationProducer and NotificationConsumer (as defined in [WS-BaseNotification]), and its interactions with other NotificationProducers and NotificationConsumers are largely defined by the WS-BaseNotification specification. This means that a NotificationBroker, implemented to conform to this specification, must also

This means that a NotificationBroker, implemented to conform to this specification, must also conform to [WS-BaseNotification]. Such a NotificationBroker can deliver notifications to NotificationConsumers that are implemented to conform to [WS-BaseNotification], and can subscribe to Notifications distributed by NotificationProducers as defined in [WS-BaseNotification].

189

190

191

192

193 194

195

A NotificationBroker may support hierarchical topics as defined in [WS-Topics]. By supporting topics, NotificationBroker can manage enterprise messaging systems more efficiently.

WS-BrokeredNotification must be composable with other Web services specifications.

3 Terminology and Concepts

In addition to the terminology and usage described in the WS-BaseNotification specification, the following are the terms defined in this specification:

Publisher:

204205

206

207

208

209

210 211

212

213

214

215

216

217

218

219

220

221

222

223

224 225

226

227

228229

230

231 232

233

234

235

236

237

238

- A Publisher is an entity that creates Notifications, based upon Situation(s) that it is capable of detecting and translating into Notification artifacts. It does not need to be a Web service.
- A Publisher can register what topics it wishes to publish with a NotificationBroker.
- A Publisher MAY be a Web service that implements the message exchanges associated with the NotificationProducer interface, in which case it also distributes the Notifications to the relevant NotificationConsumers.
- If a Publisher does not implement the message exchanges associated with NotificationProducer, then it is not required to support the Subscribe request message and does not have to maintain knowledge of the NotificationConsumers that are subscribed to it; a NotificationBroker takes care of this on its behalf.

NotificationBroker:

- A NotificationBroker is an intermediary Web service that decouples
 NotificationConsumers from Publishers. A NotificationBroker is capable of subscribing to
 notifications, either on behalf of NotificationConsumers, or for the purpose of messaging
 management. It is capable disseminating notifications on behalf of Publishers to
 NotificationConsumers.
- A NotificationBroker aggregates NotificationProducer, NotificationConsumer, and RegisterPublisher interfaces.
- Acting as an intermediary, a NotificationBroker provides additional capabilities to the base NotificationProducer interface:
 - It can relieve a Publisher from having to implement message exchanges associated with NotificationProducer; the NotificationBroker takes on the duties of a SubscriptionManager (managing subscriptions) and NotificationProducer (distributing Notifications) on behalf of the Publisher.
 - It can reduce the number of inter-service connections and references, if there are many Publishers and many NotificationConsumers.
 - It can act as a finder service. Potential Publishers and Subscribers can in effect find each other by utilizing a common NotificationBroker.
 - It can provide anonymous Notification, so that the Publishers and the NotificationConsumers need not be aware of each other's identity.

- An implementation of a NotificationBroker may provide additional added-value function that is beyond the scope of this specification, for example, logging Notifications, or transforming Topics and/or Notification content. Additional function provided by a NotificationBroker can apply to all Publishers that utilize it.
 - It may be the factory for Subscription resources or it may delegate the subscription factory to another component.
 - A NotificationBroker provides publisher registration functions.
 - A NotificationBroker may bridge between WS-Notification and other publish/subscribe systems.

PublisherRegistration:

243

244

245

246

247

248

249

250

251

252

253

254

255

256

258

259

260

261

262

263

264

265

266

267

268

269

270

271

272

273

274

275

- PublisherRegistration is a resource. A PublisherRegistration represents the relationship between a Publisher and a NotificationBroker, in particular, which topic(s) the publisher is permitted to publish to.
- A PublisherRegistration resource is created when a Publisher sends the RegisterPublisher request message to a NotificationBroker and the NotificationBroker succeeds in processing the registration.
- PublisherRegistration resources can be manipulated by messages sent to a PublisherRegistrationManager Web service.

257 RegisterPublisher:

 A RegisterPublisher is a Web service that implements the message exchanges associated with the RegisterPublisher interface. A PublisherRegistration resource is created as a result of a RegisterPublisher request to a NotificationBroker.

PublisherRegistrationManager:

- A PublisherRegistrationManager is a Web service that implements the message exchanges associated with the PublisherRegistrationManager interface.
- A PublisherRegistration resource can be manipulated through PublisherRegistrationManager message exchanges.
- A PublisherRegistrationManager provides services that allow a service requestor to query and manipulate PublisherRegistration resources that it manages.
- A PublisherRegistrationManager is subordinate to the NotificationBroker, and MAY be implemented by the NotificationBroker service provider. However WS-BrokeredNotification permits it to be implemented by a separate service provider, should an implementer so desire.

Demand-Based Publishing:

 Some Publishers may be interested in knowing whether they have any Subscribers or not, since producing a Notification may be a costly process. Such Publishers can register with the NotificationBroker as a Demand-Based Publisher.

wsn-ws_brokered_notification-1.3-spec-cs-01
Copyright © OASIS Open 2004-2006. All Rights Reserved.

Demand-Based Publishers implement message exchanges associated with the
 NotificationProducer interface.

278

279

280 281

282

283

284

- The NotificationBroker subscribes to the Demand-Based Publisher. When the NotificationBroker knows that there are no Subscribers for the Notifications from a Demand-Based Publisher, it pauses its Subscription with that Publisher; when it knows that there are some Subscribers, it resumes the Subscription.
- This way the Demand-Based Publisher does not need to produce messages when there
 are no Subscribers, however a Demand-Based Publisher is only required to support a
 single Subscriber on any given Topic, and so can delegate the management of multiple
 Subscribers, the delivery to multiple NotificationConsumers, and other related issues (for
 example security) to the NotificationBroker.

4 Publishing

296

297

298 299

300

301

302

303

304 305

306 307

308

310

288 There are three distinct stages in the Notification process

- Observation of the Situation and its noteworthy characteristics;
- Creation of the Notification artifact that captures the noteworthy characteristics of the Situation; and
- Distribution of copies of the Notification to zero or more interested parties.

Stages 1 and 2 happen largely outside of the scope of the WS-Notification architecture; this specification does not restrict the means by which these stages must occur. We refer to an entity that performs stages 1 and 2 as a Publisher,

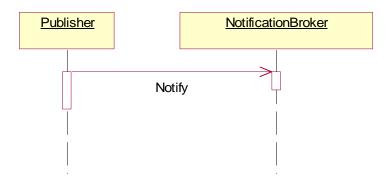

However, the WS-Notification family of specifications does specify how dissemination of messages SHOULD occur. There are two dominant patterns by which Notifications are disseminated in WS-Notification: direct and brokered.

In the direct case, the publishing Web service implements message exchanges associated with the NotificationProducer interface; it is responsible for accepting Subscribe messages and sending Notifications to interested parties. The implementer of this Web service can choose to program this behavior or delegate to specialized implementations of the Subscribe and Notification delivery behavior. This case is addressed by the WS-BaseNotification specification [WS-BaseNotification].

In the brokered case, an intermediary - a NotificationBroker - is responsible for disseminating messages produced by one or more Publishers to zero or more NotificationConsumers.

There are three patterns associated with the relationship between the Publisher and the NotificationBroker: simple publishing, broker-initiated publishing, and demand-based publishing.

309 The following figure illustrates simple publishing:

In the simple publishing scenario, the Publisher entity is responsible only for the core Publisher functions - observing the Situation and formatting the Notification artifact that describes the

wsn-ws_brokered_notification-1.3-spec-cs-01
Copyright © OASIS Open 2004-2006. All Rights Reserved.

313 Situation. The dissemination step occurs when the Publisher sends the Notify message to the NotificationBroker.

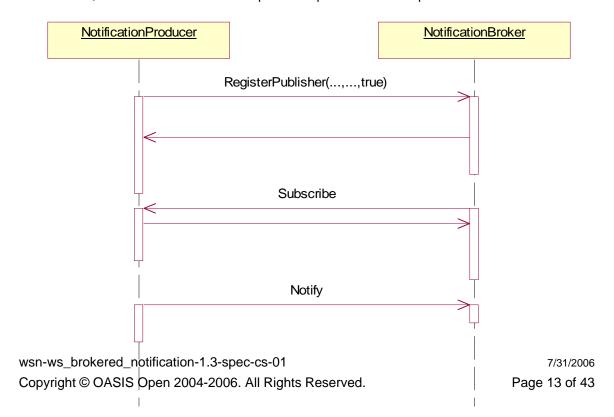

In the broker-initiated publishing pattern, the role of the Publisher is played by a Web service that implements NotificationProducer. The act of observing the Situation and formatting the Notification happens within the implementation logic of the NotificationProducer itself. The Notification is disseminated by the NotificationProducer sending the Notify message to a

NotificationBroker. The Notification may also be disseminated by sending the Notify message to any NotificationConsumers that are subscribing to the NotificationProducer.

Note: in either of the above two cases, the NotificationBroker MAY require the Publisher to register with it prior to sending the Notify message. For example, if the broker wishes to control who can publish to a given Topic, it can perform an access control check during this registration. However a NotificationBroker MAY allow Publishers to publish without pre-registration, if it so chooses.

The last pattern, the demand-based pattern, requires the Publisher to be a NotificationProducer, and thereby accept the Subscribe message. Demand-based publication is intended for use in cases where the act of observing the Situation or the act of formatting the Notification artifact might be expensive to perform, and therefore should be avoided if there are no interested parties for that Notification. A Publisher indicates its intention to use this pattern by registering with the NotificationProducer and setting the Demand component of the RegisterPublisher request message to "true". Based upon this style of registration, the NotificationBroker sends the Subscribe message to the Publisher (recall: in this situation the Publisher must implement the message exchanges associated with the NotificationProducer interface).

Furthermore, the NotificationBroker is expected to pause its Subscription whenever it has no

336 337	active Subscribers for the information provided by the Publisher. When the NotificationBroker does have active Subscribers, it is obliged to resume its Subscription to the Publisher.

339 The NotificationBroker interface defines a standard set of message exchanges to describe a 340 message broker, providing an intermediary between Publishers and Subscribers on a collection 341 of Topics, similar to a traditional Message Oriented Middleware model. 342 A NotificationBroker MAY be a WS-Resource, and if it is, it MUST support the required message exchanges defined by the [WS-ResourceProperties] specification and MAY support the optional 343 message exchanges defined by WS-ResourceProperties. 344 345 A NotificationBroker MUST also support message exchanges and MAY support Resource Property elements defined by the following interfaces: 346 347 NotificationProducer 348 NotificationConsumer RegisterPublisher 349 350 The NotificationBroker portType aggregates the three portTypes and is not the only way to implement a broker. A distributed broker implementation can be achieved by hosting 351 352 NotificationProducer, NotificationConsumer, or RegisterPublisher portTypes at one or more 353 physical endpoints. 354 The NotificationBroker is not required to provide any specific subscription durability or continuity. 355 NotificationBrokers SHOULD advertise their durability or reliability features, either through 356 policies or other means.

NotificationBrokers MAY offer flow control and MAY implement Pull-Style notifications. If they do so, NotificationBrokers SHOULD advertise these features, either through policies or other means.

5 NotificationBroker Interface

338

357

5.1 NotificationBroker Resource Properties

361 In addition to the message exchanges described in this specification, a NotificationBroker MAY

also support the required message exchanges defined in the WS-ResourceProperties

363 specification and MAY support the optional message exchanges defined in the WS-

Resource Properties specification. In such cases, the Resource Properties document defined by the NotificationBroker MUST include references to resource properties defined in

NotificationProducer and NotificationConsumer, and also MUST include a reference to the

```
...
  targetNamespace="http://docs.oasis-open.org/wsn/br-2>
...
  <xsd:element name="RequiresRegistration" type="xsd:boolean"/>
```

Furthermore, this reference MUST reflect the minOccurs and maxOccurs properties as follows:

This resource property element is further constrained as follows:

/wsn-br:RequiresRegistration

following resource property element:

The value is "true" if the NotificationBroker requires a publisher to register (see 6.1) before sending it a Notify (i.e. publish) message on a Topic.

5.2 Notify

360

366

367

368 369

370 371

372

373

376

377

378

379

380

387

- The NotificationBroker MUST support the Notify message exchange from the
- NotificationConsumer interface [WS-BaseNotification], with the following clarifications/restrictions:
- 383 A Publisher sends a Notify message to a NotificationBroker in order to publish a Notification on a
- 384 given Topic. As a result of the Publisher sending this message, Notifications are delivered to all
- 385 NotificationConsumers subscribed on the given Topic. The NotificationBroker may require that a
- 386 Publisher be registered before the Publisher sends it a Notification (see 6.1).

5.3 Subscribe

- 388 A NotificationBroker is capable of routing or producing a sequence of zero or more Notifications.
- 389 A Subscriber can register the interest of a NotificationConsumer to receive a subset of this
- 390 sequence. A Subscriber sends a Subscribe message to a NotificationBroker in order to register
- 391 this interest.
- 392 The NotificationBroker MUST support the Subscribe message exchange from the
- 393 NotificationProducer interface [WS-BaseNotification]. A NotificationBroker MAY support any
- 394 TopicExpression dialect.
- 395 If the processing of a Subscribe message is successful, the NotificationBroker MUST produce a
- 396 response message, as described in WS-BaseNotification, containing an endpoint reference to a
- 397 Subscription resource representing a Subscription created as a result of processing the

wsn-ws_brokered_notification-1.3-spec-cs-01

7/31/2006

Copyright © OASIS Open 2004-2006. All Rights Reserved.

Page 16 of 43

- 398 Subscribe request. Otherwise, the NotificationBroker must fault. WS-BaseNotification defines a 399 set of these faults. 5.4 GetCurrentMessage 400 401 The NotificationBroker MUST support the GetCurrentMessage message exchange from the NotificationProducer interface [WS-BaseNotification]. 402 403 As defined in WS-BaseNotification, in response to a GetCurrentMessage message, the 404 NotificationBroker MAY return the last Notification published on a given Topic. This is a nondestructive read, allowing a newly-subscribed NotificationConsumer to get the last Notification 405 that other NotificationConsumers have received. 406 5.5 RegisterPublisher 407 408 The NotificationBroker MUST support the RegisterPublisher message exchange from the 409 RegisterPublisher interface. 410 A Publisher can register its interest to publish messages through the NotificationBroker by 411 sending a RegisterPublisherRequest. The NotificationBroker is responsible for managing the 412 registration, and sending a RegisterPublisherResponse to the Publisher if the registration process 413 succeeds. Otherwise, the NotificationBroker MUST fault. These message exchanges are further 414 specified in the following Section 6. 5.6 CreatePullPoint 415
- 416 The NotificationBroker MAY support pull-style notification as defined in WS-BaseNotification and
- 417 attempt to create a PullPoint resource upon receiving a CreatePullPoint request. The
- NotificationBroker does not define additional constraints to its usage of the CreatePullPoint 418
- 419 operation.

6 RegisterPublisher Interface

- 421 The RegisterPublisher interface contains message exchanges for publisher registration.
- 422 NotificationBroker implements the RegisterPublisher interface and is responsible for publisher
- 423 registration. A NotificationBroker may reject processing certain publisher registrations for reasons
- 424 such as lacking of authorization.

6.1 RegisterPublisher

The RegisterPublisher message is used by the Publisher to confirm its ability to publish on a given Topic or set of Topics. If an entity wishes to register a publisher, it must send a RegisterPublisher request message to the NotificationBroker. The format of the RegisterPublisher request message is:

```
430
431
          <wsn-br:RegisterPublisher>
432
             <wsn-br:PublisherReference>
433
                wsa:EndpointReferenceType
434
             </wsn-br:PublisherReference>?
435
             <wsn-br:Topic Dialect = "xsd:anyURI">
436
                {any} ?
437
             </wsn-br:Topic>*
438
             <wsn-br:Demand>
439
                 xsd:boolean
440
             </wsn-br:Demand>?
441
             <wsn-br:InitialTerminationTime>
442
                xsd:dateTime
443
             </wsn-br:InitialTerminationTime>?

447 448

420

425 426

427

428

429

The WS-Addressing [action] Message Addressing Property MUST contain the URI http://docs.oasis-open.org/wsn/brw-2/RegisterPublisher/RegisterPublisherRequest.

- The components of the RegisterPublisher request message are further described as follows:
- 452 /wsn-br:RegisterPublisher/PublisherReference

An endpoint reference element from WS-Addressing [WS-Addressing], used to identify an entity that wishes to become a Publisher. This component MUST appear if the /wsn-br:RegisterPublisher/Demand component has value "true". If this component is missing, the Publisher is either not a Web service, or does not wish to receive messages from the NotificationBroker.

/wsn-br:RegisterPublisher/Topic

A set of TopicExpressions that identifies one or more Topics. If included, the given Publisher is registered to publish only on the set of Topics identified by this component. If this is missing the Publisher is registered to publish on any Topic supported by the NotificationBroker.

/wsn-br:RegisterPublisher/Demand

A Boolean element with the default value "false". If its value is "true", then the intent of the Publisher is to use a demand-based model from the NotificationBroker (see Section 4). In this case, the NotificationBroker MUST observe the rules associated with demand-based publishing, including establishing a Subscription with the Publisher on those Topics and pausing/resuming those Subscriptions as the NotificationBroker receives Subscriptions for those Topics.

/wsn-br:RegisterPublisher/InitialTerminationTime

This component contains the service requestor's suggestion for the initial termination time of the PublisherRegistration resource being created. This time is relative to the time source used by the NotificationBroker. If the NotificationBroker is unable or unwilling to set the TerminationTime to the given value or greater, the RegisterPublisher request MUST return an UnacceptableInitialTerminationTimeFault message. If the value is not "in the future" relative to the current time as known by the NotificationBroker, the RegisterPublisher request MUST also return an UnacceptableInitialTerminationTimeFault message.

The use of the xsi:nil attribute with value "true" indicates there is no scheduled termination time requested for the RegisterPublisher. If the element does not include the time zone designation, the value of the element MUST be interpreted as universal time (UTC).

The publisher should take care when choosing a value for InitialTerminationTime, and any subsequent values that modify the TerminationTime property of the publisher registration. It is RECOMMENDED that the publisher choose termination time values that are significantly (several orders of magnitude) greater than the network latency expected in the interaction between the publisher and the broker. In so doing, the designer avoids undesirable results, such as the termination time having expired prior to the receipt of the published message. The [WS-ResourceLifetime] specification (Section 5.1 Regarding time) contains further suggestions on how designers should reason about time values in a WS-Resource Lifetime application.

If this component is not included, the initial value of the TerminationTime resource property is dependent on the implementation of the NotificationBroker.

/wsn-br:RegisterPublisher/{any}

wsn-ws_brokered_notification-1.3-spec-cs-01
Copyright © OASIS Open 2004-2006. All Rights Reserved.

The RegisterPublisher request message allows for open content, in order to accommodate elements that may be needed by extensions built on WS-BrokeredNotification.

508

509

514

515

533

534

535

536

537

538

If a /wsn-br:RegisterPublisher/Topic component is included in the message, the
 NotificationBroker MUST register the Web service specified by the /wsn-br:RegisterPublisherReference component as a Publisher on the set of Topics
 identified by the /wsn-br:RegisterPublisher/Topic component. If for any reason the registration
 fails, the NotificationBroker MUST fault.

As part of the processing of a RegisterPublisher request, the NotificationBroker creates a
PublisherRegistration resource representing the registration. A new resource is created
regardless of whether the same Publisher has previously registered with the NotificationBroker.
The NotificationBroker MUST return a PublisherRegistrationReference in the response to the
RegisterPublisher request.

PublisherRegistrationReference is a WS-Addressing endpoint reference and includes the address of a PublisherRegistrationManager service.

ConsumerReference is a WS-Addressing endpoint reference to a NotificationConsumer that accepts notifications from this registered Publisher. If Demand value is false in the RegisterPublisher request, the NotificationBroker MUST include a ConsumerReference in the response.

If the NotificationBroker accepts the RegisterPublisher request message, it must respond with a message of the following form:

```
516
517
          <wsn-br:RegisterPublisherResponse>
518
             <wsn-br:PublisherRegistrationReference>
519
                <wsa:Address>
520
                   Address of PublisherRegistration Manager
521
                </wsa:Address>
522
523
             </wsn-br:PublisherRegistrationReference>
524
             <wsn-br:ConsumerReference>
525
                <wsa:Address>
526
                    Address of a NotificationConsumer with which the
527
                    Publisher is registered
528
                </wsa:Address>
529
530
             </wsn-br:ConsumerReference>?
          </wsn-br:RegisterPublisherResponse>
531
532
```

The WS-Addressing [action] Message Addressing Property MUST contain the URI http://docs.oasis-open.org/wsn/brw-2/RegisterPublisher/RegisterPublisherResponse

The components of the RegisterPublisher response message are further described as follows: /wsn-br:RegisterPublisherResponse/PublisherRegistrationReference

A WS-Addressing endpoint reference to the PublisherRegistration resource created by the RegisterPublisher request message. This element MUST be present in the

wsn-ws_brokered_notification-1.3-spec-cs-01
Copyright © OASIS Open 2004-2006. All Rights Reserved.

7/31/2006

541	/wsn-br:RegisterPublisherResponse/ConsumerReference				
542 543	A WS-Addressing endpoint reference to a NotificationConsumer resource that accepts notifications for this publisher registration.				
544 545	Any Notification Messages sent by the Publisher (and considered to take place under this registration) MUST be sent to this endpoint reference.				
546 547	The NotificationBroker MAY use this as a mechanism for identifying the Publisher as having registered.				
548 549 550 551 552	If the NotificationBroker does not respond to the RegisterPublisher request message with the RegisterPublisherResponse message, then it MUST send a fault. The NotificationBroker MUST fault if it rejects the publisher registration. This specification defines the following faults associated with failure to process the RegisterPublisher request message:				
553	ResourceUnknownFault				
554 555 556	 The NotificationBroker is acting as a WS-Resource, and the resource identified in the message is not known to the Web service. This fault is specified by the WS-Resource [WS-Resource] specification. 				
557	InvalidTopicExpressionFault				
558 559	 The TopicExpression presented in the request message is invalid. This fault is specified in WS-BaseNotification. 				
560	TopicNotSupportedFault				
561 562	 The TopicExpression does not match any Topic supported by the NotificationBroker. This fault is specified in WS-BaseNotification. 				
563	PublisherRegistrationRejectedFault				
564 565	 The publisher registration is rejected by the NotificationBroker. The NotificationBroker MAY provide a hint in the fault message indicating why the registration is rejected. 				
566	PublisherRegistrationFailedFault				
567 568	 The publisher registration process has failed. The NotificationBroker MAY include a hint in the fault message indicating why the registration is failed. 				
569	UnacceptableInitialTerminationTimeFault				
570 571 572	 The value of InitialTerminationTime specified in the RegisterPublisher request message is not acceptable to the NotificationBroker. The NotificationBroker MAY include a hint in the fault message indicating why the value is unacceptable. 				

RegisterPublisher response message. The NotificationBroker may choose to include extra information such as reference parameters in this reference.

6.1.1 Example SOAP Encoding of the RegisterPublisher Message Exchange

573

574 575

576

610 611

612

The following is a non-normative example of a RegisterPublisher request message using SOAP 1.1 [SOAP 1.1] or SOAP 1.2 [SOAP 1.2]:

```
577
           <s:Envelope ... >
578
             <s:Header>
579
               <wsa:Action>
580
                   http://docs.oasis-open.org/wsn/brw-
581
          2/RegisterPublisher/RegisterPublisherRequest
582
               </wsa:Action>
583
584
            </s:Header>
585
            <s:Body>
              <wsn-br:RegisterPublisher>
586
587
                <wsn-br:PublisherReference>
588
                    <wsa:Address>
589
                       http://www.example.org/PublisherEndpoint
590
                    </wsa:Address>
591
                    <wsa:ReferenceParameters>
592
                      <npex: NPResourceDisambiguator>
593
                          uuid:84decd55-7d3f-65ad-ac44-675d9fce5d22
594
                      </npex: NPResourceDisambiguator>
595
                    </wsa:ReferenceParameters>
596
                 </wsn-br:PublisherReference>
597
                 <wsn-br:Topic Dialect="http://docs.oasis-open.org/wsn/t-</pre>
598
          1/TopicExpression/Simple">
599
                    npex:SomeTopic
600
                </wsn-br:Topic>
601
                <wsn-br:Demand>
602
                    true
603
                </wsn-br:Demand>
604
                <wsn-br:InitialTerminationTime>
                    2003-12-25T00:00:00.00000Z
605
606
                </wsn-br:InitialTerminationTime>
607
               </wsn-br:RegisterPublisher>
608
            </s:Body>
609
          </s:Envelope>
```

The following is a non-normative example of a RegisterPublisher response message using SOAP:

```
613
           <s:Envelope ... >
614
             <s:Header>
615
               <wsa:Action>
616
                   http://docs.oasis-open.org/wsn/brw-
617
          2/RegisterPublisher/RegisterPublisherResponse
618
               </wsa:Action>
619
               . . .
620
             </s:Header>

636
                  </wsa:Address>
637
638
                </wsn-br:ConsumerReference>
639
              </wsn-br:RegisterPublisherResponse>
640
            </s:Body>
641
          </s:Envelope>
```

7 PublisherRegistrationManager Interface

- The PublisherRegistrationManager interface defines message exchanges to manipulate
- PublisherRegistration resources. The PublisherRegistrationManager MAY expose
- 645 PublisherRegistrations as WS-Resources, and if it does then the PublisherRegistrationManager
- 646 MUST support the immediate termination interface defined by WS-ResourceLifetime and it MAY
- support the scheduled termination interface defined by WS-ResourceLifetime.

- If the PublisherRegistrationManager does not respond to a request message with a response
- 649 message defined in this specification, then it MUST send a fault. The WS-ResourceProperties
- and WS-ResourceLifetime specifications define some of these fault messages.

7.1 PublisherRegistration Resource Properties

In addition to the message exchanges described in this specification, a

PublisherRegistrationManager MAY also support the required message exchanges defined in the WS-ResourceProperties specification and MAY support the optional message exchanges defined in the WS-ResourceProperties specification. In such cases, the Resource Properties document defined by the PublisherRegistrationManager MUST also include references to the following resource property elements:

Furthermore, these references MUST reflect the minOccurs and maxOccurs properties as follows:

These resource property elements are further constrained as follows:

/wsn-br:PublisherReference, /wsn-br:Topic, and /wsn-br:Demand

These elements are defined in the description of the RegisterPublisher request message (see 6.1).

wsn-ws_brokered_notification-1.3-spec-cs-01

7/31/2006

Copyright © OASIS Open 2004-2006. All Rights Reserved.

Page 24 of 43

/wsn-br:CreationTime

Indicates the date and time at which the PublisherRegistration was created. This component MAY be omitted, for example by resource-constrained devices that cannot associate a creation time with PublisherRegistration resources they create.

If PublisherRegistration is exposed as a WS-Resource, the PublisherRegistrationManager MAY permit the following resource properties to be modified by a requestor, by sending a SetResourceProperties request message as defined in the WS-ResourceProperties specification:

/wsn-br:Topic and /wsn-br:Demand

Note: /wsn-br:Demand may not take the value "true" if there is no /wsn-br:PublisherReference resource property element in the resource property document.

7.2 DestroyRegistration

The PublisherRegistrationManager interface provides a destroy operation, providing a means by which a requestor can terminate the PublisherRegistration resource. The DestroyRegistration request message has the following form:

```
<wsn-br:DestroyRegistration>
    {any} *
</wsn-br:DestroyRegistration>
```

701 The WS-Addressing [action] Message Addressing Property MUST contain the URI

http://docs.oasis-open.org/wsn/brw-2/PublisherRegistrationManager/DestroyRegistrationRequest

The DestroyRegistration request message allows for open content and contains an extension component

/wsn-br:DestroyRegistration/{any}.

705 706 707

695

696 697

698

699

700

702

703

704

Upon receipt of the DestroyRegistration request, the PublisherRegistrationManager MUST attempt to destroy the PublisherRegistration resource. If the DestroyRegistration request message is successfully processed, the PublisherRegistrationManager MUST respond with the following message:

- The WS-Addressing [action] Message Addressing Property MUST contain the URI
- 717 http://docs.oasis-open.org/wsn/brw-
- 718 2/PublisherRegistrationManager/DestroyRegistrationResponse.
- 719 If the PublisherRegistrationManager does not respond to the DestroyRegistration request
- message with the DestroyRegistrationResponse message, then it MUST send a fault. This

746

747

- The PublisherRegistration is a WS-Resource, and the resource identified in the message is not known to the Web service. This fault is specified by the WS-Resource [WS-Resource] specification.
- ResourceNotDestroyedFault
 - The PublisherRegistrationManager was unable to destroy the PublisherRegistration resource for some reason.

7.2.1 Example SOAP Encoding of the DestroyRegistration Message **Exchange**

The following is a non-normative example of a DestroyRegistration request message using SOAP:

```
734
           <s:Envelope ... >
735
             <s:Header>
736
               <wsa:Action>
737
                 http://docs.oasis-open.org/wsn/brw-
738
           {\it 2/PublisherRegistration Manager/DestroyRegistration Request}
739
               </wsa:Action>
740
               . . .
741
             </s:Header>
742
             <s:Body>
743
               <wsn-br:DestroyRegistration/>
744
             </s:Body>
745
           </s:Envelope>
```

The following is a non-normative example of a DestroyRegistration response message using SOAP:

```
748
          <s:Envelope ... >
749
            <s:Header>
750
              <wsa:Action>
751
                http://docs.oasis-open.org/wsn/brw-
752
          2/PublisherRegistrationManager/DestroyRegistrationResponse
753
              </wsa:Action>
754
755
            </s:Header>
756
            <s:Body>
757
              <wsn-br:DestroyRegistrationResponse/>
758
            </s:Body>
759
          </s:Envelope>
```

7/31/2006

8 Security Considerations

Baseline security considerations for WS-Notification are discussed in WS-BaseNotification specification. This section only covers additional broker specific security measurements.

8.1 Securing PublisherRegistration

763 764 765

766

767

768 769

770

771

772 773

774

775

776

782

783 784

785

786

787

760

In addition to the security policies for Notification process and Subscription process, WS-BrokeredNotification should provide policies such that:

- 1. only authorized Publishers can register with a NotificationBroker
- only messages of authorized Publishers and of registered topics, can be accepted by a NotificationBroker
- 3. only authorized principals can modify or delete PublisherRegistration resource

Given that WS-BrokeredNotification may implement WS-ResourceProperties and WS-ResourceLifetime, the security considerations outlined in these specifications need to be taken into account where appropriate. Authorization policies for those Resource Properties should be put in place so that the implications of providing the state information (through GetResourceProperty request messages) or through notification of state change and modification of the resource properties (through SetResourceProperty request messages), are taken into

- account.
 A NotificationBroker can support the security measurements of NotificationProducers and
 NotificationConsumers mentioned in WS-BaseNotification. Acting as an intermediary, A
 NotificationBroker MAY also provide convenience to security management, including but not
- 781 limited to:
 - Controlling who can publish on a topic at publisher registration time
 - Refusing to relay messages from unauthorized publishers
 - Imposing security measurements on all messaging routing through the broker
 - Providing convenience in messaging security management based on topics.

NotificationBrokers SHOULD advertise, whether through policy assertions or other means, what security measures they take.

Appendix C. WSDL 1.1

The following illustrates the WSDL 1.1 for the Web service methods described in this specification:

<?xml version="1.0" encoding="utf-8"?>
<!--</pre>

OASIS takes no position regarding the validity or scope of any intellectual property or other rights that might be claimed to pertain to the implementation or use of the technology described in this document or the extent to which any license under such rights might or might not be available; neither does it represent that it has made any effort to identify any such rights. Information on OASIS's procedures with respect to rights in OASIS specifications can be found at the OASIS website. Copies of claims of rights made available for publication and any assurances of licenses to be made available, or the result of an attempt made to obtain a general license or permission for the use of such proprietary rights by implementors or users of this specification, can be obtained from the OASIS Executive Director.

OASIS invites any interested party to bring to its attention any copyrights, patents or patent applications, or other proprietary rights which may cover technology that may be required to implement this specification. Please address the information to the OASIS Executive Director.

Appendix D. Revision History

1291

| Rev | Date | By Whom | What |
|-------------------------|----------------|-------------------------------|---|
| 1.2 01 | 2004-
05-12 | Lily Liu | Initial version |
| 1.2 02 | 2004-
06-07 | Dave
Chappell | Updates and consistency check w/ other WS-N specs |
| 1.2 03 | 2004-
06-24 | Lily Liu,
Dave
Chappell | Addition of a Goals and Requirements section and minor format changes |
| 1.2 03 | 2004-
07-12 | Lily Liu | Addition of a status paragraph |
| 1.3 01a
-
1.3 01e | 2005-
02-01 | Dave
Chappell,
Lily Liu | Series of issue resolution and consistency reviews with WS-BaseNotification |
| 1.3 01f | 2005-
06-10 | Lily Liu | Issues: 3.1, 3.4, 3.5, 3.6, 3.7, 3.8, 3.9, 3.10, 3.11, 3.12, 3.13, 3.14, 3.15, 3.16, 3.17, 3.18, 3.19, 3.20 Updated the Terminology, Introduction, and Security sections. Updated sections about NotificationBroker and PublisherRegistrationManager resource properties. |
| 1.3 01g | 2005-
07-01 | Lily Liu | Updated the status section. Changed term NotificationMessage to Notification. Added CreatePullPoint portType to NotificationBroker. Completed issue resolutions. Replaced the Abstract section. |
| 1.3 02d | 2005-
11-04 | Lily Liu | Included changes to address: WSN 2.62, WSN 3.23, WSN 3.24, WSN 3.25, WSN 3.26, WSN 3.28, and WSN 3.29 Resolved AI 137, AI 138, AI 141, AI 142 AI 144, and AI 145. Updated references. |
| 1.3 pr02 | 2006-
02-17 | Lily Liu | Updated the document with changes suggested in the errata document (http://www.oasis-open.org/apps/org/workgroup/wsn/download.php/16679/wsn- |
